

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

#### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

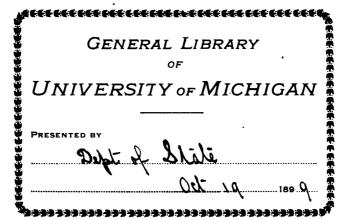

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

#### **About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

# COMMERCIAL RELATIONS

OF THE

85806

## UNITED STATES

WITH

## FOREIGN COUNTRIES

DURING

THE YEAR 1898.

IN TWO VOLUMES.
VOLUME I.

ISSUED FROM THE BUREAU OF FOREIGN COMMERCE, DEPARTMENT OF STATE.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1899.

#### PUBLICATIONS OF THE BUREAU OF FOREIGN COMMERCE.\*

The publications of the Bureau of Foreign Commerce, Department of State, are: I.—COMMERCIAL RELATIONS, being the annual reports of consular officers on the commerce, industries, navigation, etc., of their districts.

II.—CONSULAR REPORTS, issued monthly, and containing miscellaneous reports from diplomatic and consular officers.

III.—ADVANCE SHEETS, CONSULAR REPORTS, issued daily except Sundays and legal holidays, for the convenience of the newspaper press, commercial and manufacturing organizations, etc.

IV.—EXPORTS DECLARED FOR THE UNITED STATES, issued quarterly, and containing the declared values of exports from the various consular districts to the United

States for the preceding three months.

V.—Special Consular Reports, containing series of reports from consular officers on particular subjects, made in pursuance to instructions from the Department.

Following are the special publications issued by the Bureau prior to 1890:

Labor in Europe, 1878, one volume; Labor in Foreign Countries, 1884, three volumes; Commerce of the World and the Share of the United States Therein, 1879; Commerce of the World and the Share of the United States Therein, 1880–81; Declared Exports for the United States, First and Second Quarters, 1883; Declared Exports for the United States, Third and Fourth Quarters, 1883; Cholera in Europe in 1884, 1885; Trade Guilds of Europe, 1885; The Licorice Plant, 1885; Forestry in Europe, 1887; Emigration and Immigration, 1885-86 (a portion of this work was published as Consular Reports No. 76, for the month of April, 1887); Rice Pounding in Europe; 1887; Sugar of Milk, 1887; Wool Scouring in Belgium, 1887; Cattle and Dairy Farming in Foreign Countries, 1888 (issued first in one volume, afterwards in two volumes); Technical Education in Europe, 1888; Tariffs of Central America and the British West Indies, 1890.

The editions of all these publications, except Tariffs in Central America, etc., are

exhausted and the Department is therefore unable to supply copies.

In 1890, the Department decided to publish reports on special subjects in separate form, to be entitled SPECIAL CONSULAR REPORTS. There are now the following SPECIAL CONSULAR REPORTS:

Vol 1 (1890).—Cotton Textiles in Foreign Countries, Files in Spanish America, Carpet Manufacture in Foreign Countries, Malt and Beer in Spanish America, and Fruit Culture in Foreign Countries. Fol. 2 (1890 and 1891).—Befrigerators and Food Preservation in Foreign Countries, European Emigration, Olive Culture in the Alpes Maritimes, and Beet Sugar Industry and Flax Cultivation in Foreign Countries.

Vol. 3 (1891).—Streets and Highways in Foreign Countries. Vol. 4 (1891).—Port Regulations in Foreign Countries. Vol. 5 (1891).—Canals and Irrigation in Foreign Countries. Vol. 5 (1891 and 1832).—Coal and Coal Consumption in Spanish America, Gas in Foreign Countries, and India Rubber

Vol. 7 (1892).—The Stave Trade in Foreign Countries and Tariffs of Foreign Countries.
Vol. 8 (1892).—Fire and Building Regulations in Foreign Countries.
Vol. 9 (1892 and 1893).—Australian Sheep and Wool and Vagrancy and Public Charities in Foreign Countries Vol. 10 (1894).—Lead and Zinc Mining in Foreign Countries and Extension of Markots for American Flour.

Vol. 11 (1894).—American Lumber in Foreign Markets. Vol. 12 (1895).—Highways of Commerce. Vol. 13 (1896 and 1897).—Money and Prices in Foreign Countries.

Vol. 14 (1833).—The Drug Trade in Foreign Countries.

Vol. 15 (1838).—Part I. Soap Trade in Foreign Countries; Screws, Nuts, and Bolts in Foreign Countries; Argols in Europe, Rabbits and Rabbit Furs in Europe; Cultivation of Ramie in Foreign Countries.

Part II. Sericulture and Silk Reeling and Cultivation of the English Walnut.

Of these Special Consular Reports, Australian Sheep and Wool, Cotton Textiles in Foreign Countries, Files in Spanish America, Fire and Building Regulations, Gas in Foreign Countries, Highways of Commerce, Lead and Zine Mining, Malt and Beer in Spanish America, Port Regulations, Refrigerators and Food Preservation, Vagrancy, etc., and Tariffs of Foreign Countries are exhausted, and no copies can be supplied by the Department. A new edition of Tariffs will be issued about June 1, 1899.

Of the monthly Consular Reports, many numbers are exhausted or so reduced that the Department is unable to accede to requests for copies. Of the publications of the Bureau available for distribution, copies are mailed to applicants without charge. In view of the scarcity of certain numbers, the Bureau will be grateful for the return of any copies of the monthly or special reports which recipients do not care to retain. Upon notification of willingness to return such copies, the Department will forward franking labels to be used in lieu of postage in the United States,

Canada, the Hawaiian Islands, and Mexico.

Persons receiving Consular Reports regularly who change their addresses should

give the old as well as the new address in notifying the Bureau of the fact.

In order to prevent confusion with other Department bureaus, all communications relating to Consular Reports, including Commercial Relations, should be carefully addressed, "Chief, Bureau of Foreign Commerce, Department of State, Washington, U. S. A."

<sup>\*</sup>Formerly Bureau of Statistics. Name changed to Bureau of Foreign Commerce by order of the Secretary of State July 1, 1897.

#### EXPLANATORY.

By concurrent resolution of the United States Senate and House of Representatives, adopted February 27, 1899, 10,000 copies of the Review of the World's Commerce, introductory to Commercial Relations of the United States with Foreign Countries during the year 1898, were ordered to be printed, separately, for distribution by the Department of State. The Review is also printed with the regular edition of Commercial Relations (two volumes), of which 5,000 copies were ordered by the Senate and House to be printed for distribution by the Department of State.

Commercial Relations is wholly distinct from the daily and monthly publications, Consular Reports, the latter dealing with current subjects of importance, while Commercial Relations deals only with annual reports and statistics.

Applications for these publications should be addressed:

CHIEF,

BUREAU OF FOREIGN COMMERCE,

DEPARTMENT OF STATE,

Washington, D. C.

6

#### VALUES OF FOREIGN COINS AND CURRENCIES.\*

The following statements show the valuation of foreign coins, as given by the Director of the United States Mint and published by the Secretary of the Treasury, in compliance with the first section of the act of March 3, 1873, viz: "That the value of foreign coins, as expressed in the money of account of the United States, shall be that of the pure metal of such coin of standard value," and that "the value of the standard coins in circulation of the various nations of the world shall be estimated annually by the Director of the Mint, and be proclaimed on the 1st day of January by the Secretary of the Treasury."

In compliance with the foregoing provisions of law, annual statements were issued by the Treasury Department, beginning with that issued on January 1, 1874, and ending with that issued on January 1, 1890. Since that date, in compliance with the act of October 1, 1890, these valuation statements have been issued quarterly, beginning with the statement issued on January 1, 1891.

The fact that the market exchange value of foreign coins differs in many instances from that given by the United States Treasury has been repeatedly called to the

from that given by the United States Treasury has been repeatedly called to the attention of the Bureau of Foreign Commerce. An explanation of the basis of the quarterly valuations was asked from the United States Director of the Mint, and under date of February 7, 1898, Mr. R. E. Preston made the following statement:

"When a country has the single gold standard, the value of its standard coins is

estimated to be that of the number of grains fine of gold in them, 480 grains being reckoned equivalent to \$20.67 in United States gold, and a smaller number of grains in proportion. When a country has the double standard, but keeps its full legal-tender silver coins at par with gold, the coins of both gold and silver are calculated on the basis of the gold value.

"The value of the standard coins of countries with the single silver standard is calculated to be that of the average market value of the pure metal they contained during the three months preceding the date of the proclamation of their value in United States gold by the Secretary of the Treasury. The value of the gold coins of United States gold by the Secretary of the Treasury. The value of the gold coins of silver-standard countries is calculated at that of the pure gold they contain, just as if they had the single gold standard.

"These valuations are used in estimating the values of all foreign merchandise exported to the United States. The value of the Indian rupee, although calculated according to law at the value of the pure metal contained therein, has a commercial value above the value of the silver bullion; consequently the value for customs purposes is determined in each case by the consular certificates attached to the invoice

of exports from that country to the United States."

The following statements, running from January 1, 1874, to January 1, 1898, have been prepared to assist in computing the values in American money of the trade, prices, values, wages, etc., of and in foreign countries, as given in consular and other reports. The series of years are given so that computations may be made for each year in the proper money values of such year. In hurried computations, the reductions of foreign currencies into American currency, no matter for how many years, are too often made on the bases of latest valuations. All computations of values, trade, wages, prices, etc., of and in the "fluctuating currency countries" should be made in the values of their currencies in each year up to and including 1890, and in the quarterly valuations thereafter.

To meet typographical requirements, the quotations for the years 1876, 1877, 1879, 1881, 1882, and 1891-94 are omitted, these years being selected as showing the least

fluctuations when compared with years immediately preceding and following.

To save unnecessary repetition, the estimates of valuations are divided into three classes, viz. (A) countries with fixed currencies, (B) countries with fluctuating currencies, and (C) quarterly valuations of fluctuating currencies.

#### A .- Countries with fixed currencies.

The following official (United States Treasury) valuations of fereign coins do not include "rates of exchange."

Countries.	Standard.	Monetary unit.	Value in United States gold.	Coins.
Argentine Republic <sup>1</sup> .	Gold and silver.	Peso	\$0. 96, 5	Gold—Argentine (\$4.82,4) and Argentine; silver—peso and
Austria-Hungary 2	Gold	Crown	. 20, 3	divisions. Gold—20 crowns (\$4.05,2) and 10 crowns.
Belgium	Gold and silver.	Franc	. 19, 3	Gold-10 and 20 franc pieces:
Brazil	Gold	Milreis	. 54, 6	silver—5 francs. Gold—5, 10, and 20 milreis; silver—4, 1, and 2 milreis.
British North America (except New-	do	Dollar	1. 00	ver—g, 1, and 2 entreis.
foundland). Chile	do	Peso	. 36, 5	Gold—escudo (\$1.25), doubloon (\$3.65), and condor (\$7.30); sil-
Costa Rica	do	Colon	. 46, 5	ver—peso and divisions. (fold—2, 5, 10, and 20 colons; sil-
Cuba	Gold and silver.	do	. 92, 6	ver5, 10, 25, and 50 centisimes. Golddoubloon (\$5.01,7;; silverpeso (60 cents).
Denmark Egypt	Golddo	Pound (100 pias-	. 26, 8 4. 04, 3	Gold — 10 and 20 crowns. Gold — 10, 20, 50, and 100 plasters;
Finland	do	ters). Mark	. 19, 3	silver—1, 2, 10, and 20 plasters. Gold—10 and 20 marks (\$1.93 and
France	Gold and silver.	Franc	. 19, 3	\$3.85,9). Gold5, 10, 20, 50, and 100 francs;
Germany	Golddo	Mark Pound sterling	. 23, 8 4. 86, 61	silver—5 francs. Gold—5, 10, and 20 marks. Gold—sovereign (pound sterling)
Greece	1		1 .	and half sovereign. Gold.—5, 10, 20, 50, and 100 drach- mas; silver.—5 drachmas.
Haiti Italy	dodo	Gourde Lira	. 96, 5 . 19, 3	Silver—gourde. Gold—5, 10, 20, 50, and 100 lire;
Japan <sup>3</sup>	Gold	Yen	. 49, 8 1. 00	silver—5 lire. Gold—1, 2, 5, 10, and 20 yen.
Liberia Netherlands 4				Gold—10 florins; silver—½, 1, and 2½ florins.
Newfoundland Portugal Russias	Gold	Dollar	1.01,4 1.08	Gold—\$2 (\$2.02, 7). Gold—1, 2, 5, and 10 milreis.
Russin <sup>6</sup>	do	Ruble	51,4	Gold—imperial (\$7.718), } imperial (\$3.80), and I ruble; silver—
Spain				1, 1, and 1 ruble. Gold—25 pesetas; silver—5 pesetas.
Sweden and Norway. Switzerland	Gold	Crown	. 26, 8	Gold-10 and 20 crowns.
	1		i	Gold 5, 10, 20, 50, and 100 francs; silver 5 francs.
Turkey		1		Gold—25, 50, 100, 200, and 500 piasters.
Uruguay	do	Peso	1. 03, 4	Gold - peso; silver - peso and divisions.
Venezuela	Gold and silver.	Bolivar	. 19, 3	Gold—5, 10, 20, 50, and 100 bolivars; silver—5 bolivars.

<sup>&</sup>lt;sup>1</sup> In 1874-1875 the gold standard prevailed.

<sup>2</sup> The gold standard was adopted Oct. 1, 1892. (See Consular Reports, No. 147, p. 623.) Values are still, however, frequently expressed in the florin or gulden, which is worth 2 crowns or 40.6 cents.

<sup>3</sup> Gold standard adopted Oct. 1, 1897. (See Consular Reports, No. 201, p. 259.)

<sup>4</sup> See note to table of fluctuating currencies.

<sup>5</sup> For an account of the adoption of the gold standard, see Review of the World's Commerce, 1896-97, p. 254.

#### METRIC WEIGHTS AND MEASURES.

Metric weights:

Milligram (1000 gram) equals 0.0154 grain. Milligram (1000 gram) equals 0.0154 grain.

Centigram (10 gram) equals 0.1543 grain.

Decigram (10 grams) equals 1.5432 grains.

Gram equals 15.432 grains.

Decagram (10 grams) equals 0.3527 ounce.

Hectogram (100 grams) equals 3.5274 ounces.

Kilogram (1,000 grams) equals 2.2046 pounds.

Myriagram (10,000 grams) equals 22.046 pounds.

Quintal (100,000 grams) equals 220.46 pounds.

Millier or tonnea—ton (1,000,000 grams) equals 2,204.6 pounds.

Metric dry measures:

Milliliter (1000 liter) equals 0.061 cubic inch. Centiliter (10 liter) equals 0.6102 cubic inch.
Deciliter (1 liter) equals 6.1022 cubic inches.
Liter equals 0.908 quart.
Decaliter (10 liters) equals 9.08 quarts.

Hectoliter (100 liters) equals 2.838 bushels. Kiloliter (1,000 liters) equals 1.308 cubic yards.

Metric liquid measures:

Milliliter  $(\tau_0 \tau_0)$  liter) equals 0.0388 fluid ounce. Centiliter  $(\tau_0 \tau_0)$  liter) equals 0.338 fluid ounce. Deciliter  $(\tau_0 \tau_0)$  liter) equals 0.845 gill. Liter equals 1.0567 quarts. Decaliter (10 liters) equals 2.6418 gallons. Hectoliter (100 liters) equals 26.418 gallons. Kiloliter (1,000 liters) equals 264.18 gallons.

Metric measures of length:

Millimeter (1000 meter) equals 0.0394 inch.

Centimeter (1000 meter) equals 0.3937 inche.

Decimeter (1000 meter) equals 3.937 inches.

Meter equals 39.37 inches. Decameter (10 meters) equals 393.7 iuches.

Hectometer (100 meters) equals 328 feet 1 inch.

Kilometer (1,000 meters) equals 0.62137 mile (3,280 feet 10 inches).

Myriameter (10,000 meters) equals 6.2137 miles.

Metric surface measures:

Centare (1 square meter) equals 1,550 square inches. Are (100 square meters) equals 119.6 square yards. Hectare (10,000 square meters) equals 2.471 acres.

# MESSAGE FROM THE PRESIDENT OF THE UNITED STATES.

#### To the Senate and House of Representatives:

I transmit herewith a communication from the Secretary of State, accompanying the Commercial Relations of the United States for the year 1898, being the annual reports of the consular officers upon the industries and commerce of foreign countries. In view of the value of these reports to the manufacturing and exporting interests of the country, I indorse the recommendation of the Secretary of State, that Congress authorize the printing of the usual editions of ten thousand copies of the general summary, entitled "Review of the World's Commerce," and of five thousand copies of Commercial Relations (including this summary), to enable the Department of State to meet the demand for such information.

WILLIAM MCKINLEY.

EXECUTIVE MANSION, Washington, February 21, 1899.

#### LETTER FROM THE SECRETARY OF STATE.

#### The PRESIDENT:

I have the honor to transmit, in accordance with section 208 of the Revised Statutes, the Commercial Relations of the United States with Foreign Countries during the year 1898, being the annual reports of the consular officers of the United States on the industries and commerce of their respective districts, with more particular reference to the development of United States trade. Following the practice inaugurated by instructions from this Department, dated August 10, 1897, which were renewed and amplified by instructions of August 5, 1898, the consular officers have reported specifically as to favorable openings for our products, or disadvantages and hindrances which they consider should be overcome. It is gratifying to be able to state that the development of the exports of our manufactured goods, as well as of our raw products, which was so strikingly exhibited in the annual reports transmitted to Congress May 16, 1898, continues with constantly enlarging prospects. The diplomatic and consular service of the United States shows steady improvement in the work of collecting information

of practical value to our manufacturers and exporters, and many of the consular officers and the embassies and legations have rendered important services in efforts to promote American trade, and to find new outlets for American industry and enterprise. The work of editing and compiling the commercial reports in the Bureau of Foreign Commerce of this Department has reached a degree of promptitude and efficiency of distribution which seems to be giving general satisfaction to the business interests of the country and is exciting the emulation of foreign governments. I have the honor to recommend that Congress be requested, in accordance with previous action, June 30, 1898; March 2, 1897; and April 8, 1896, to authorize the printing, under the direction of the Department of State, of a special edition of 10,000 copies of the Review of the World's Commerce, to be distributed by the Department as the daily, monthly, and special Consular Reports are now distributed, and of 5,000 copies of Commercial Relations, to enable the Department to meet requests for the entire work.

Respectfully submitted.

JOHN HAY.

DEPARTMENT OF STATE, Washington, February 20, 1899.

#### INSTRUCTIONS TO CONSULAR OFFICERS.

DEPARTMENT OF STATE, Washington, D. C., August 5, 1898.

To the Consular Officers of the United States.

GENTLEMEN: In pursuance to instructions sent you July 8, 1896, and August 10, 1897, and to paragraph 3 of section 592 (pp. 253 and 254) of Consular Regulations, you are hereby instructed to prepare and forward to the Bureau of Foreign Commerce (formerly the Bureau of Statistics) of this Department, not later than November 1, and sooner if practicable, a report, in an unnumbered dispatch, on the commerce and industries of your consular district, covering any facts and figures for the year 1897 not already transmitted to the Department, and as complete and accurate a statement as may be obtained of the trade and industries of said district for the six months ended June 30, 1898.

The special object of this instruction is to enable the Department to lay before Congress, on or about the 1st of January, 1899, a comprehensive statement of the trade, not only of the United States with the rest of the world, but of the various countries with each other. The Department is aware of the difficulty of obtaining official statistics covering so recent a period as the first half of the year 1898, but the success which has attended previous efforts of consular officers in obtaining recent information from both official and unofficial sources, as embodied in the Reviews of the World's Commerce for 1894-95, 1895-96, and 1896-97, published separately and also as an introduction to the annual volumes Commercial Relations of the United States for those years, encourages the hope that you will be enabled to make a satisfactory exhibit. The Department is not so much concerned as to obtaining detailed figures with the stamp of official accuracy as in securing an intelligent survey of the industrial activity and general tendencies of trade. The business men of the United States are particularly interested in learning whether there has been an increase or decrees in the more important line. decrease in the more important lines of exports and imports, especially such as enter into the trade of the United States; also the application of new processes of an industrial character which may open up a new channel of supply from this country or suggest to manufacturers improvements in their own processes or the creation of new industries. You are doubtless aware that the United States is rapidly taking the lead in certain forms of manufacture, both new and old. There are two points in which American manufacturers seem to have the advantage: First, the greater excellence and labor-saving quality of machines and apparatus of all kinds; and second, the more attractive finish, combined with greater durability, of certain lines of goods, such as textiles, boots and shoes, furniture, tools, etc. It would be very valuable to our manufacturers to know whether these qualities have made an impression in your district; and if they have not, what obstacles exist to their becoming favorably known.

Consular officers, from time to time, have reported upon deficiencies in American methods of packing goods and of the conditions of transportation, exchange, banking, etc., with this country, and the disadvantage under which we labor from the fact that European houses give longer credits and more liberal terms, not only as to payments by their customers, but in manufacturing certain patterns and quantities of goods and in getting them up in attractive shape to meet local peculiarities and customs. All these subjects are matters of practical importance in considering the means of developing American trade, and you are requested to make such further suggestions with regard to them as the more recent developments of business in

your district seem to warrant.

Other subjects of special importance are: Changes in currency values, especially in the United States gold value of the monetary unit, and the rate of exchange; changes in tariff rates and customs rules, port regulations, wharfage dues, improvements in harbor facilities, extension of telegraph and cable service, existing conditions of transportation facilities (internal, coastwise, and ocean), including new lines of railways, new wagon and caravan routes, new canal or river systems, opened

or projected, and the actual means and time of communication with United States ports, noting any material increase or decrease in freight rates; existing rates of licenses for carrying on business, especially those relating to commercial travelers; regulations affecting commercial travelers, including requirements as to passports, etc.; condition of the merchant marine, including data as to vessels built and vessels purchased from other countries; tonnage owned and employed in commerce with other countries, and methods of aiding and protecting the merchant marine; regulations, in brief, as to quarantine. Also, any laws or regulations of a discriminating character which affect American vessels; statement as to any taxes or excises, in addition to tariff rates, which affect United States trade; changes in patent, copyright, and trade-mark laws; existing postal rates, domestic and foreign.

Full information is also desired in regard to any laws requiring goods to be marked

so as to show the country of origin or manufacture.

If it be impracticable for you to obtain all the information asked for in the time prescribed, state the fact in your dispatch and forward the omitted data as a supplementary report as soon as possible. You will observe on page 254 of Consular Regulations that the report herein called for is required to be transmitted by August 1. It is possible that you have already prepared your report in compliance with this regulation; if so, you need only supplement it with the additional data called for in this instruction.

Please acknowledge this instruction by addressing the Chief of the Bureau of Foreign Commerce and informing him whether he may expect the report called for

within the time necessary for transmission after November 1, 1898.

A copy of the Review of the World's Commerce for 1896-97 has been mailed to you, and the two volumes Commercial Relations for 1896-97 will be forwarded shortly. From a careful examination of these you will be able to inform yourself fully as to

the scope and details of your report.

A manufacturing firm has called the attention of the Department to the importunce of obtaining precise information as to the coaser classes of cotton textiles manufactured or consumed in different parts of the world, specifying the width, count (that is, the number of picks to the inch, always giving the warp first), and the number of yards to the pound. They add: "There seems to be a disposition in some of the far Eastern markets to take up other American goods than the ordinary standard sheetings and drills that have heretofore been sold to them; hence the general terms 'sheetings' and 'drills' no longer convey full information." You will please cover the special points indicated as to cotton goods.

Respectfully, yours,

THOS. W. CRIDLER, Third Assistant Secretary.

## REVIEW OF THE WORLD'S COMMERCE.

#### INTRODUCTION.

The annual reports of the consular officers upon the commerce and industries of their districts in the various countries of the world have usually comprised portions of two years, owing to the fact that they were prepared with special reference to the fiscal year of the United States Treasury ending June 30, which, of course, comprises six months of the previous calendar year, as well as six months of the current calendar year. It has been the effort of the Department during the past few years to make the reports as nearly contemporaneous as possible with the date of their publication, which is intended to be about the beginning of every calendar year. For this reason, the annual reports, which are compiled at the end of each fiscal year, are supplemented with such additional data as will provide the best obtainable summary of conditions for the latest calendar year. Thus, primarily, the reports for the fiscal year ended June 30, 1898, would be restricted to the last six months of the calendar year 1897 and the first six months of the calendar year 1898, but the work has now been brought to such a point of completeness that the Review of the World's Commerce herewith presented may be said to describe the conditions not only during that period, but down to the 1st of January, 1899. Consequently, the title both of the Review and of the detailed reports of consular officers may be said to cover more specifically the year 1898, including both the fiscal and calendar years.

The Review of the World's Commerce for the fiscal year ended June 30, 1897, which was published under date of April 25, 1898, described the marked changes which had occurred in the industrial and commercial development of the United States, not only during that year, but more especially during the twelve months ended March 31, 1898, with particular reference to the rapid growth of the exports of manufactured products. The conclusion was drawn that United States manufacturers had demonstrated their ability to compete with the industries of other countries, not only in neutral markets but in the home markets of the more advanced industrial nations, and the opinion was expressed that the "international isolation" of the United States, so far as industry and commerce were concerned, had become a thing of the past, and we could no longer afford to disregard international rivalries, now that we ourselves had become a competitor in the world-wide struggle for trade. The steady progress of commercial expansion on the lines thus indicated is attested, not only by the custom house returns of exports and imports, as published by the Bureau of Statistics of the Treasury Department, but by official publications of other governments, the conclusions of leading foreign newspapers, and especially by the detailed reports of the diplomatic and consular representatives of the United States.

During the calendar year 1897, the agricultural exports of the United States amounted, in round figures, to \$730,000,000, and in the calendar year 1898 to nearly \$852,000,000. The exports of manufactured goods during 1897 aggregated nearly \$280,000,000, and in 1898, \$308,000,000.1 We find, upon comparison of percentages of the total export trade, that, notwithstanding the enormous increase of exports of agricultural products, amounting to more than \$120,000,000, there was a decline in the percentage of manufactured exports of less than 1 per cent, as compared with the previous year; that is to say, while the percentage of agricultural exports rose from 67.63 to 69, the exports of manufactured goods fell only from 25.89 to 24.96. There was an actual gain during the year 1898 in manufactured exports of about \$28,000,000, against an increase during the calendar year 1897 of \$26,000,000. When the fact is considered that, during a portion of the year 1898, the industrial and commercial activities of the United States were more or less affected

1 NOTE BY BUREAU OF FOREIGN COMMERCE, MARCH 6, 1899.—Since the Introduction was written, Mr. O. P. Austin, Chief of the Bureau of Statistics of the United States Treasury Department, has given to the press a statement in which he says:

American manufacturers seem likely to make their greatest record in the fiscal year which ends four months hence (June 30, 1899). The reports of the Treasury Bureau of Statistics, covering seven months of the fiscal year, show that the exportation of domestic manufactures is \$23,000,000 greater than the highest record ever before made in the corresponding months of the fiscal year. During the seven months ending February 1, 1899, the exports of domestic manufactures amounted to \$182,336,503, or an average of a million dollars a day for every business day of that period. Not only are the manufacturers increasing their sales in foreign markets, but they are evidently supplying, to a greater extent than ever before, the home market. The imports of manufactures in the seven months under consideration amount to only \$147,200,972, or \$35,000,000 less than the manufactures exported. The exports of manufactures during the past seven months have been nearly 25 per cent greater than the imports of manufactures. Comparing conditions with those of a decade ago, the evidence of gain by our manufactures is even more striking. In the seven months ending February 1, 1889, our exports of manufactures were \$78,751,933; in the seven months ending February 1, 1899, they were \$182,336,503, an increase of 131 per cent in the exports of manufactures during the decade. On the other hand, imports of manufactures in the decade have fallen 23 per cent, despite the fact that the consuming population has meantime increased 25 per cent, the imports of manufactures in the seven months ending February 1, 1889, having been imports of manufactures in the seven months ending February 1, 1889, having been \$194,996,778, against \$147,200,972 in the corresponding seven months ending February 1, 1899.

A decade ago, the imports of manufactures were more than double the exports of manufactures; now, the exports of manufactures are 25 per cent greater than the imports of manufactures, despite the fact that the home demand for manufactures increased 25 per cent through a 25 per cent increase in population. In the seven months ending February 1, 1889, imports of manufactures were 147 per cent greater than the exports of manufactures; in the seven months ending February 1, 1899, they are 20 per cent below the exports of manufactures. Comparing the seven months of the fiscal year ending February 1, 1899, with the corresponding months of 1889, it is found that exports of manufactures increased 131 per cent, while the total exports, including manufactures, increased only 65 per cent, and the exports of all articles except manufactures but 51 per cent. It is thus apparent that despite the unusual foreign demand for our agricultural products, the manufacturers are making a more rapid gain in their exports than are any other class of our producers. The following table shows the exports of manufactures and total of exports in the seven months ending February 1 of each fiscal year, from 1889 to 1899:

Seven months ending February 1—	Exports of manufactures.	Total ex- ports.	Seven months ending February 1—	Exports of manufactures.	Total ex- ports.
1889	89, 077, 820 97, 188, 098 96, 095, 466	\$454, 197, 522 540, 634, 133 547, 726, 350 651, 263, 531 526, 941, 376 573, 651, 520	1898	126, 802, 682 153, 882, 682 153, 541, 049	\$501, 902, 934 524, 964, 969 655, 177, 127 718, 367, 407 749, 549, 338

by the war with Spain, the increase of \$28,000,000 in the exports of manufactured goods would seem to indicate that we not only did not lose ground, but made substantial gains in certain markets. This conclusion will be found to be justified by the many reports of consular officers in certain countries which indicate continued progress, not only in the consumption of lines of goods already introduced, but in sales of various products not previously taken from the United States. The total increase of exports of manufactured goods during the past three years amounts to about \$107,000,000, or more than one-half the total exports of manufactured goods (a little over \$201,000,000) in 1895.

The fact has been fully brought out in the publications of the Bureau of Statistics of the Treasury Department that, while the exports of the United States have increased enormously, the imports have not kept pace with those of the leading industrial countries of Europe. This is held to indicate that our manufacturers are making progress in meeting demands of domestic trade which, for a long time, were satisfied only by purchases from other countries, as well as extending their sales in foreign markets. In other words, it would appear that this country is rapidly becoming industrially independent to a very great extent of the rest of the world, and at the same time is developing its commercial relations in such a way as will enable it to take in exchange much larger quantities of goods which it is unable to produce. The industries of the United States have, in fact, been developed to the point where it seems to be not only practicable but comparatively easy to supply a considerable portion of the world as well as the home market. As has been frequently pointed out by the consular officers, the conditions of manufacture in the United States to day are such as to admit of successful competition in foreign markets in many lines of manufacture in which, at one time, we were exposed to the rivalry of foreign industries. The observations of the consular service of the United States in European countries, as set forth in their annual reports accompanying this Review, would seem to warrant the conclusion that the manufacturers of the United States have a distinct advantage in the greater ingenuity of the average American operative and the economy of labor saving machinery over their foreign competitors, and that the obstacles they have to overcome are chiefly those of the special trade methods of different countries, the longer credits given by European exporters, and occasional government discriminations by foreign nations against them. It is very evident that the export of manufactured goods is no longer a matter of experiment, but that our large industries have satisfied themselves that it is feasible to dispose of their surplus products in various quarters of the world and have addressed themselves seriously to the study of the conditions which are requisite for healthful and permanent growth. To quote the president of the National Association of Manufacturers, Mr. Theodore C. Search, in his annual report at the meeting of the association in Cincinnati in January last, the "manufacturers of the United States have acquired a position in the world's markets from which they can not be dislodged. With the start that has been made, our foreign trade is bound to grow, and no opposition from our strongest competitor can bar our progress."

The great increase in the applications to consular officers for specific information and for assistance in introducing American goods, affords strong evidence of the general perception of this fact among our manufacturers, and in many instances, consular officers have reported to the Department that they find themselves embarrassed by the number of such requests, entailing careful inquiry and largely increased corre-

spondence. It is gratifying to be able to state that this Bureau has received from business houses many expressions of appreciation of the efforts of the diplomatic and consular representatives to satisfy their special requirements, as well as of the progress effected in obtaining commercial and industrial information for the general benefit of trade. As has been shown in official publications of other governments, in foreign trade journals, and in reports of our consular officers, the commercial work of the United States consular service has excited the interest and emulation of certain European governments which were supposed, at one time, to be in advance of the United States in their efforts to promote their foreign trade. There is, of course, a limit to the usefulness of Government agencies of this character, and it may be expected that, as our manufacturers familiarize themselves with the trade conditions of particular countries, they will find it to be to their advantage to establish agencies and depend upon their individual exertions in working out the details of business development. The consular officers, in the meantime, are preparing the way for such individual effort, and in many instances, are giving practical help to firms which are seeking immediate outlets for their products. In course of time, the relations of the consular service to the export trade will doubtless adjust themselves, and the growing pressure upon it will have been relieved.

In this Review, as in those that have preceded it, no attempt is made to deal with the trade of the United States or its manufacturing development in detail, inasmuch as the statistics of the various branches of our commerce and industries are fully treated in the publications of the Bureau of Statistics of the Treasury, the Department of Agriculture, the Census Bureau, and the Department of Labor. The scope of "Commercial Relations," including the "Review," is necessarily restricted to the conditions in foreign countries affecting United States trade, as reported by the diplomatic and consular officers, and figures from United States sources are used only for purposes of comparison.

FREDERIC EMORY, Chief, Bureau of Foreign Commerce.

DEPARTMENT OF STATE, February 15, 1899.

#### COMMERCE OF THE UNITED STATES IN 1897 AND 1898.

For purposes of comparison, the following figures, showing the foreign trade of the United States during the calendar years 1897 and 1898, are taken from the summary of the Bureau of Statistics of the Treasury Department, corrected to January 30, 1899. They give complete data concerning our imports and exports by groups, articles, and countries.

# AFRICA.

As noted in previous editions of the Review, the continent of Africa, for trade reasons, is considered in four geographical divisions—(1) the Northern, covering the Canary Islands, Madeira, Morocco, Tunis, Tripoli, Algeria, Egypt, and Erithrea; (2) the West Coast, embracing Cape Verde Islands, Senegal, Sierra Leone, Liberia, Ivory Coast, Gold Coast, Slave Coast, Lagos, Niger Protectorate, Togoland, Cameroons, Congo Free State, German Southwest Africa, and Angela; (3) South Africa, including Cape Colony, Natal, Orange Free State, South African Republic (Transvaal), and Mozambique, the trade of this country being chiefly in transit for the Transvaal; (4) the East Coast, embracing Zanzibar, Madagascar, Mauritius, Réunion, German East Africa, and British East Africa.

In places not covered by reports from United States consular officers, recourse has been had to British and French colonial reports, in order

to give a comprehensive picture of trade.

According to the returns of the Bureau of Statistics of the Treasury Department, the trade of the United States with the continent of Africa (the Azores being classed under Europe) during the ten years 1889 to 1898 was:

### IMPORTS.

	1889.	1890.	1891.	1892.	1893.

The Treasury heading "British Africa," it should be noted, covers Cape Colony and Natal, in South Africa; Bathurst, Sierra Leone, Ivory Coast, Gold Coast, Lagos, the Niger Protectorate, etc., on the West Coast, and Mauritius, etc., on the East Coast. United States trade with the Transvaal and Orange Free State is not specified, being largely conducted through Cape Colony and Natal.

### NORTH AFRICA.

### CANARY ISLANDS.

From official returns of the countries named, the following figures of imports from and exports to the Canary Islands for the latest years available are taken:

Country.	Imports from Canaries.	Exports to Canaries.
Great Britain (1897)	\$2, 790, 000 250, 000 27, 300	\$2, 540, 000 590, 370 382, 800
Total	3, 067, 300	3, 513, 170

<sup>\*</sup>On account of the war with Spain, United States trade decreased materially in 1898; the year 1897 is therefore taken as more nearly representing normal conditions.

#### The Moniteur Officiel du Commerce says:

The commercial movement of the Canaries has progressed in the last ten years at the rate of from 2,000,000 to 3,000,000 pesetas (\$386,000 to \$579,000) a year. From 18,000,000 pesetas in 1888, imports rose to 43,000,000 pesetas in 1895. In these totals, however, the importation of coal is included; without coal, the total in 1895 was 17.494.356 pesetas (\$3.376.411).

17,494,356 pesetas (\$3,376,411).

The economic development of the Canaries depends solely on the number of boats stopping at the ports, which promotes a larger importation of coal and a more

extended sale of meat, poultry, vegetables, fruits, wines, etc. The exportation of early fruits and vegetables has been of importance in the last six years. Cochineal formed at one time the sole wealth of the Canaries. In 1889, its exportation amounted to 20,000,000 pesetas (\$3,860,000); since that time the quantity has greatly diminished.

The early fruits and vegetables from the Canaries are sent almost entirely to London and Liverpool. Tomatoes are exported in boxes of different sizes, delivered to the exporters at from 12 to 15 pesetas (\$2.32 to \$2.90) the quintal of 46 kilograms (101 pounds); at London, they sell for 1s. the kilogram (24 cents per 2.2 pounds). As regards cultivation, the seeds are imported from England, sowed in the months of August and September, and transplanted a month later into well-irrigated land. About 9,300 plants can be put in a fanagada, or 1½ acres. The fruit is large and highly flavored, the earliest ripening at the end of October, when the export trade commences. The potato crop is ready in December or Jannary, and a quintal (220 pounds) sells in London for 14s. to 17s. (\$3.36 to \$4.08). Many landowners plant a second crop, which is ready for market in March or April. From October to May one can always count on two harvests, whatever may be the product cultivated. Both potatoes and tomatoes are remunerative. The banana, however, when it is of good quality, gives the greatest profit. The ground yields eighteen months after planting; one can count on 1,000 to 1,200 plants to the acre, and on 150 bananas to the plant, with two harvests a year. The bunches are sold for 3 to 5 pesetas (58 to 97 cents). The freight on tomatoes and potatoes is 15s. (\$4.60) the ton for London or Liverpool; on bananas, 1½s. to 2s. (36 to 48 cents) per bunch for London and 24 cents for Liverpool. Oranges are excellent and abundant, but are not cultivated for export.

export.
There are seven sugar refineries operated by steam in Grand Canary Island, one at Teneriffe, and two on the island of Palma. Sugar cane yields most abundantly, and the industry is profitable, as the sugar enters Spain free of duty, while foreign

sugars pay 40 per cent.

The vines produce well, and the wines, when made with care, rival the best known.

The Canaries are famous as a resort, from 2,000 to 3,000 visitors wintering in the islands.

The following table gives the average quantities and values of the principal exports from Grand Canary Island:

Articles.	Quantity.	Value.	
Tomatoes	2, 342, 890 1, 546, 777 6, 704, 836 296, 174 2, 042, 918 19, 682 1, 129, 568	Pesetas. 820, 011 234, 732 844, 685 814, 478 306, 347 40, 752 612, 365	\$158, 262 45, 303 163, 015 157, 194 59, 125 7, 865 118, 186
Total		3, 673, 320	708, 950

a 1 kilo = 2.2046 pounds.

b 1 liter = 1.0567 quarts.

The value of the exports from Tenerific averages 9,426,425 pesetas (\$1,819,299).

#### MADEIRA.

Consul Jones sends from Funchal the following statistics of trade: The imports into Madeira in 1897 were valued at \$1,165,677, against \$330,032 in 1896. Coal, cereals, and dry goods were the chief articles. The exports were \$1,324,768, against \$938,631 in 1896, wine, the most important export, figuring at \$895,732 in 1897. The trade with the principal countries in 1897 was:

Countries.	Exports.	Imports.	Countries.	Exports.	Imports.
Great Britain Russia Germany	187, 613	\$668, 846 861 91, 052	Morocco. France America.	170, 853	\$16, 648 17, 139 205, 599

The table of exports, says the consul, does not give the United States a fair rating, as the trade is mostly via Great Britain and is credited to that country. The export of eggs to South Africa is developing remarkably.

### MOROCCO.

The consul-general at Tangier, Mr. Cummere, gives imports and exports in 1897 as follows:

Countries.	Exports.	Imports.	Countries.	Exports.	Imports.
Great Britain			Ptaly	\$29; 374. 10 <sup>,</sup> 1, 425. 87	\$3, 758. 93 11, 621. 20
Spain	39, 246, 12	201, 463, 36	Total	915, 801. 93	1, 491, 708, 05

The chief articles of import are cotton goods, \$571,424, and flour, \$169,695. Oxen, \$257,475; hides, \$57,332; goatskins, \$85,981; eggs, \$86,681, and slippers, \$236,511, figure among the most important exports. The consul-general says that there has been a decrease of nearly 20 per cent in imports during the year, due to the rise in exchange. Owing to the lack of direct communication, United States goods to reach Morocco must pass through foreign ports. The cotton cloth, which is largely used in the country, comes from Manchester, and is known in England by the name of domestic; the Moors call it "Americano." Flour is imported from France and is not of good quality. American flour is considered too expensive.

#### ALGERIA.

According to French official returns, the foreign commerce of Algeria in 1897 was: Imports, \$11,716,000; exports, \$9,601,000. These figures do not include the commerce with France, which is given as follows: Imports, \$45,412,900; exports, \$47,478,000. The share of the principal countries in the trade was:

Countries.	Imports.	Exports.	Countries.	Imports.	Exports.
Great Britain	177, 700	\$2, 485, 300 498, 700 372, 600	Spain	<b>60</b> 3, 300	558, 700 147, 800

The principal articles of import and export were: Imports—coffee, cattle, cetton, textiles, cereals, coal, tobacco, wood, and machinery; exports—rushes, reeds, cork, iron ore, manufactured tobacco, vegetable hair, tan bark, fodder, skins, and horses.

### TUNIS.

The imports of Tunis in 1896 were stated in Commercial Relations, 1896-97, at \$8,963,000 and the exports at \$6,659,000. Figures for the total trade for 1897 are not available, but the exports from France to Tunis in that year, according to official statistics, were \$9,071,000 and the imports into France from Tunis were \$4,655,000. The exports from Great Britain were \$1,071,092 and the imports into Great Britain from

Tunis were \$361,139. These two countries, with Italy, Russia, and Austria, are the chief competitors for the trade of Tunis. Imports from the United States in 1896 were given at \$35,000 and exports at \$1,000. Cotton goods were imported in 1896, according to official figures, to the value of \$349,206, and flour and grain to the value of \$1,688,400. Lumber, coffee, and sugar figure among the imports. Wheat was exported to the value of \$1,872,000, and barley valued at \$539,700. The exports of clive oil amounted to \$772,000. Other exports were cattle, sponges,

wine, bark, etc. A British foreign office report gives the sources of imports as follows: Cotton goods from England, either direct or via Malta; tea from England; coffee from Austria; flour from France; wine and spirits from Austria, France, and Maks; tinned previsions from England and France: tinued milk from Switzerland; butter and cheese from Italy, Denmark, France, Holland, Switzerland, and the United States; beer from Germany, France, Austria, and a little from England; dried fruits from France and Malta; chemicals, drugs, and seaps from England and France; candles from France and England; timber from Scandinavia, Venice, Roumania, and Canada; bricks and tiles from France; drain pipes from England and France; clothing from England and France; glass and earthen ware from Germany, Austria, France, and Great Britism; metals from Italy, France, Germany, and Austria; petroleum from Russia; other oils from Italy, France, England, and the United States; machinery from Great Britain, France, United States, and Germany; coal from England; woolen and silk goods from Italy, Malta, Austria, England, and France; ironmongery from Belgium, France, England, Germany, and Austria; leather goods from England, France, Italy, Tripoli, and Morocco; clocks, silver, and jewelry from Switzerland, Germany, France, Italy, England, and the United States; wooden houses in sections from England, Scandinavia. Canada, and the United States; cereals from Italy, Russia, and Tripoli; sugar from France, England, and Austria.

Belgium has a considerable commerce with Tunis, continues the British report, representing about 3 per cent of the total, although Belgium is searcely mentioned in the returns as the country of origin of any import. In like manner, Austria and Spain furnish many prod-

nets, even when not specially mentioned.

### TRIPOLI.

The British vice consulat Tripoli gives the following table of trade in 1897:

Countries.	Exports.	Imports.	Countries.	Exports.	Imports.
Great Britain Turkey France Austria United States Italy	121, 663 481, 784 29, 199 184, 927	\$385, 170 283, 592 340, 655 181, 034 107, 063	Germany. Belgium Tunis Other countries Total	29, 899	\$81, 750 66, 184 19, 466 ,749, 441 2, 334, 355

The imports in 1896 were \$1,751,940 and the exports \$1,826,154. The trade decreased during the year, but imports from Great Britain remain the same, viz, 32 per cent of the total value. The vice-consul says:

In a thinly populated country like Tripoli, having little of its own to give and requiring less from other countries by reason of the simple mode of living and

primitive ways of its inhabitants, it is not to be expected that trade can ever assume large proportions. Even under the most favorable conditions it can not but remain confined within modest limits, although, if carried on smoothly, as it formerly was, it might become highly profitable to those concerned. In the year under consideration it was especially dull toward the end, when general stagnation in business seemed to set in. The purchasing powers of the inhabitants were circumscribed by the bad harvest. The enormous competition among commission agents tended to complicate matters. Trade with Tunis, which since 1893 has been decreasing, has now almost entirely ceased. There is no commercial treaty between Turkey and Tunis, and so long as the former refuses to recognize the French Protectorate, it is not likely that any arrangement will be arrived at whereby the products of this country, as well as those of Turkey generally, will be admitted to the benefit of a special tariff.

The commercial prosperity of Tripoli, notes the British report, depends in a great measure on its caravan trade with the interior of Africa. On this subject the Moniteur Official du Commerce says:

The commercial movement between Tripoli, Bengazi, Ghadamis, Rhat, and the Soudan has never, even in the most favorable years, exceeded 10,000,000 to 11,000,000 francs (\$1,930,000 to \$22,123,000), imports and exports. In 1895 it was about 7,000,000 francs (\$1,351,000), and in 1896 declined to 5,700,000 francs (\$1,100,100). The troubled condition of the Soudanese country in general would be sufficient to explain this decrease in trade between Tripoli, Bengazi, and the countries in the center of Africa. But it is not the only reason. It must be remarked that Tripoli is no longer one of the few doors into central Africa open to Europe. Commerce can now pass through other channels, and both natives and Europeans have commenced to avail themselves of them. The articles exported from Tripoli and the Soudan are:

Articles:	Val	ue.	Articles.	Val	10.
Esparto grass	1, 050, 000 1, 150, 000 55, 000 660, 000 220, 000 185, 000 1, 375, 000	\$360, 910 202, 650 221, 950 10, 615 128, 480 42, 460 35, 705 265, 875 24, 125	Eggs Bones and rags Ostrich plumes Red pepper Carbonate of salt Oranges and lemons. Different goods Total	Francs. 270, 000 65, 000 1, 300, 000 81, 000 43, 000 150, 000 790, 000	\$52, 110 12, 545 250, 900 15, 633 8, 299 28, 950 152, 470

Of these exports, about half, or 4.715,000 francs (\$909,995), went to Great Britain and Malta; 2,393,000 francs (\$461,849) went to France, the remainder being divided between Algeria, Tunis, Turkey, Italy, Greece, etc. Of wool and skins, 800,000 francs' (\$154,400) worth was sent to America.

### EGYPT.

A comprehensive report on trade conditions in Egypt, by Consul-General Harrison, of Uairo, was printed in Advance Sheets No. 209, September 2, and Consular Reports No. 217, October, 1898. The following extracts are from his report:

The imports of Egypt in 1875 amounted to about \$25,000,000; in 1896, they amounted to \$50,900,000, being an increase of 100 per cent in twenty-one years.

These imports came from the following countries:

Countries.	Value.	Countries.	Value.
England and possessions	9, 958, 000 6, 060, 000 3, 512, 000	Russia	

The exports from the United States to Egypt in 1896 consisted of the following:

Articles.	Value.	Articles.	Value.
Agricultural implements	134	Woods, and manufactures of	\$29, 117 50, 198 \$215, 540

While it may be that large quantities of American goods go into Egypt via Germany and England, still there is no doubt that this market is very much neglected. To convey some idea of the character and extent of the market, I give some of the principal items imported in 1896.

Articles.	Value.	Articles.	Value.
Petroleum Writing paper Wrapping paper Lumber for building Furniture Coal Charcoal	172,000 228,000 2,192,000 230,000 2,125,000	Soap Cotton yarn Cotton fabrics Iron hardware Copper-brass goods Machinery, and parts of	810,000 7,500,000 2,355,000

The total exports of Egypt in 1896 amounted to \$68,000,000, consisting of cotton, cotton seed, cane sugar, beans, wheat, onions, skins, and natural wools. England

takes about 35 per cent of the exports.

Our imports from Egypt in 1896 amounted to \$4,632,000, consisting almost entirely of cotton. In the first eleven months of 1897, cotton imports from Egypt amounted to \$4,277,618; sugar imports from Egypt amounted to \$3,034,273. Cotton raising is becoming more general every year in Egypt. The importance of this line of agriculture may be seen by an examination of the exports. In 1875, they exported 339, 222 bales of cotton; in 1896, 680,960 bales. Of this latter England received 337,078 bales; Russia, 89,565 bales; France, 76,247 bales; Austria, 71,436 bales; United States, 59,339 bales, and other countries in smaller amounts. This shows that they have doubled their exports of cotton in twenty-one years.

It was only ten years ago that Egyptian cotton was introduced into the United States. The trade has increased with marvelous rapidity; in 1890, 18,900 bales and in 1896, 59,339 bales were imported. The larger part of the cotton sent from Egypt is consigned to Boston commission agents and sold to New England mills. The development of the cotton industry in Egypt dates from the time of the civil war in America. England is anxious to have its growth encouraged, in order to have another market from which to draw supplies for Lancashire mills. This development has not been without its influence on other agricultural products; this can be seen in the increased importation of flour. From 1881 to 1892, the annual imports amounted to 25,000 barrels; in 1894, 107,000 barrels; 1895, 191,000 barrels; 1896, 350,000 barrels. In 1896, 80 per cent came from Marseilles, France; the rest from Odessa, Trieste, etc.

The past few years have been marked by unusual activity in engineering works in Egypt. New sugar factories have been erected, many bridges built, light rail-roads for agricultural purposes constructed, and there is no doubt that the coming

year will show a great increase in the amount of Egyptian imports.

Although the United States sold 15 locomotives to Egyptian railways in 1898, this class of goods comes mostly from Belgium; first-class passenger cars from England; rails from England and Germany; bridge work from Belgian, French, and German firms. The increase of the imports in iron and machinery of 1896 was the result of the development of the sugar industry, and the introduction of electrical trainways in Cairo and Alexandria.

The portable-engine trade, as well as that of steam pumps, is extensive, and would be greater if there were less difficulty in obtaining permission for pumping purposes

from the Government.

Fixed engines and corn-grinding mills, from 12 to 25 horsepower, are being sold all the year around, and lately compound engines have been in demand, as the present class of engineers have more experience and are better able to work theseengines than a few years ago.

The use of thrashing machines is making strides in the country; and, besides two Government land departments, a few other large landed proprietors are working them.

Of pumps for irrigating purposes and mills for corn grinding, England is the leading exporter to this country.

Since the making of agricultural roads, light railways have been a new feature in

Egypt, and some good orders have been given to both Belgium and England.
In engineering tools, England gets a large share, although from time to time

American makes are placed on this market and out out English trade.

Files for Egyptian Government railway administration have been a sore point to the English manufacturers for some three years; they have been furnished by Belgian and Italian firms at lower prices than the English files.

The trade of iron, steel, tin, etc., is entirely in the hands of Syrians and Arabs,

who keep stocks of bars, plates, angles, etc., which are bought direct from Belgium and England or through the German commission houses.

Almost the whole of the cotton piece-goods trade is in the hands of German and French firms. These firms, resident in Manchester, have branch houses in Egypt or are represented by German agents. Their travelers, principally Germans, are sent out every year and remain for from three to five months in the country. There is at present a strong and increasing competition from Germany in the lower qualities of cotton prints. In woolen goods, there is a growing competition from France, Italy,

and Germany, although at present England predominates.

The importation of coal during 1896 at Alexandria amounted to over 631,000 tons. Calculating the local consumption and that of the immediate neighborhood (but not including supplies to steamers) at 35,000 tons, it may be estimated that over 520,000 tons leave Alexandria for the interior by rail and by the Nile via Rosetta and via Mahmondieh Canal. Port Said, with its big importation of nearly 1,100,000 tons and its cheaper means of communication (by boat through Lake Menzalch to Damietta and thence by the River Nile) with Cairo, successfully opposes Alexandria merchants in the trade of Cairo and the stations on the Damietta branch of the The annual importation of coal into Alexandria and Port Said is steadily increasing.

The increase of importation of iron and steel manufactures will continue for many years to come. Many new works are likely to be constructed, and there will be an increase of agricultural railroads. New gas and water works in the provinces and the construction of water reservoirs and railways will continue to increase for many

уевгв.

### ERITHREA.

The Movimento Commerciale del Regno d'Italia says that the trade of Massowah consists almost entirely of goods in transit, those coming from the interior of the African continent being exported to India, Europe, or the Red Sea ports, and those imported into Massowah by sea being destined for the interior. The following table shows the value of the imports into Massowah for the year 1896, the latest year for which figures are available, as compared with 1895:

Countries of origin.	1895.	1896.
Dutiable articles.		
Europe	\$131,006	\$363, 917
Asiatic Turkey	174, 026	533, 758
AdenEgypt	908, 576 102, 693	1, 199, 787 119, 716
Interior of Africa	134, 559	88, 522
Other Italian possessions on the Red Sea	40, 392	48, 665
Articles free of duty.	İ	
Italy	355, 157	912, 128
Italy		76 250
Total	1, 846, 399	3, 842, 750

The increase in 1896 was \$1,496,351, or 44.7 per cent.

## WEST COAST.

The West Coast of Africa embraces Cape Verde Islands, the British colonies of Gambia, Sierra Leone, Gold Coast, Lagos, and the Niger Protectorate; the French colonies and dependencies of Senegal, the Ivory Coast, Guinea, Dahomey, Kongo, etc.; the Kongo Free State, under Belgian Government; the Portuguese colony of Angola; the Republic of Liberia, and the German colonies of Togolaud, the Kameroons, and southwest Africa. The geographical continuity is broken in order to unite under one head the British colonies, through which the larger part of United States trade in West Africa is transacted. The French and German possessions are similarly grouped.

### CAPE VERDE ISLANDS.

Acting Consul Bartleman sends from Santiago copies of official statistics, showing that the imports in 1896 were \$1,723,705 and the exports \$417,312. Of the imports, Portugal sent \$385,815 worth and Portuguese colonies \$1,417; England, \$87,872; America, \$71,727. The exports were distributed among the countries principally participating in the trade, as follows: Portugal, \$342,618; Portuguese colonies, \$45,793; Brazil, \$15,412; English colonies, \$2,227; French colonies, \$4,528; America, \$5,124. Coal figures largely among the imports (\$963,896) and textiles were valued at \$210,991. Coffee (\$155,820), medicinal nuts (\$125,436), and coral (\$4,063) are among the chief exports. The imports at Santiago from the United States in 1897 were \$18,383, consisting chiefly of flour, lumber, indian coru, and denims. Goat-

skins, rum, and salt are sent to the United States.

### BRITISH WEST AFRICA.

Gambia.—British colonial returns give the total value of imports in 1897 at \$681,310 and of exports at \$798,106 (exclusive of specie). The average for the five previous years was: Exports, \$691,043; imports, \$559,648. The staple product, ground nuts, was exported to the amount of 20,000 tons, against 12,000 tons in 1896. The export of rubber also improved. Exports from Great Britain to Gambia in 1897 were to the value of \$398,566, and the imports from Gambia amounted to \$238,459. The trade in 1896 was: Exports from Great Britain, \$231,200;

imports into Great Britain, \$244,500.

Sierra Leone.—Consul Williams, of Sierra Leone, gives the imports in 1897 at \$2,221,704, against \$2,407,498 in 1896. Of the imports in 1897, \$131,395 was imported from the United States, \$1,837,142 from Great Britain, \$29,203 from British colonies, and \$220,962 from Germany, France, Spain, and Portugal. In spite of the lack of direct communication, he says the United States has sold more than half as much as all other foreign (i. e. non-British) countries combined. The value of exports in 1897 was \$1,950,238, against \$2,385,280 in 1896. Of this amount, the United States received \$74; Great Britain, \$919,502; British colonies, \$142,266; and other countries, \$888,394. During the first six months of 1898, Sierra Leone imported from the United States to the value of \$49,800. The decrease in trade in 1897 was due to disturbances in the hinterland, and is, the consul thinks, of a temporary nature. The colony, he continues, shows promise of great development.

and will offer a market for unlimited supplies of breadstuffs, canned goods, lumber, tools, kerosene, cotton goods, shoes, and other articles which the United States can supply.

Gold Coast.—The following is from a British foreign office report, the

values being expressed in United States currency:

There has been an increase of the trade of the colony during 1897, though the country beyond Ashanti has been in anything but a settled state. The total value of imports in 1897 was \$3,816,251 and the exports \$4,174,450. The increase in the total trade over 1896 was \$349,512. The principal articles of import are cotton, woolen, and silk goods; spirits, hardware, rice, flour, provisions, tobacco, building materials, and wearing apparel. The exports comprise palm oil, palm kernels, Tubber, gold dust, timber, coffee, cocoa, monkey skins, and kola nuts.

The following comparative table shows that the greater proportion of the trade is

with the United Kingdom:

Countries.	Imports in 1897.	Exports in 1897.
United Kingdom. British colonies. Foreign countries.	295, 820	

The resources of the colony are considerable, though their development is much retarded by the lack of proper means of transport and an unhealthy climate. The cultivation of coffee and cocoa is on the increase, though coffee cultivation is handicapped by an insufficiency of water. The gold-mining industry is carried on chiefly in the western district. Three or four companies are doing steady work. The gold reefs of the mining district have been declared by experts to be similar to those of Johannesburg. The industry has been hampered by the difficulty of transporting the necessary machinery from the coast to the mines; but the Government is constructing a railway from the coast to the mining districts in the neighborhood of Tarquah, and, when this is completed, it is confidently anticipated that the gold industry will receive an impetus which will result in the development of existing mines and the opening of new ones.

Public works have been taken vigorously in hand. Roads are to be constructed from the chief coast centers to the interior. The following have been undertaken: From Accra to the Akin district, 25 miles; from Tinkranku to Kpong, 190 miles (work started in July; 25 miles completed up to December 31, 1897); from Axim to river Ankobra, 3 miles (work almost completed); from Bonsa to Tarkwa, 12 miles (2 miles completed); from Danoe to Dogplata, 23 miles (work completed). Two railways commenced in 1896 were completed in 1897—from Accra to Kumassi van Invention and from Takandi Baye to Targueh. Insuaim, and from Takoradi Bay to Tarquah. Arrangements have been made for the construction of a line from Sekoudi to Tarquah. This will go through the min-

ing and timber districts, and work was commenced early in 1898.

Lagos.—The imports of Lagos in 1897, according to colonial returns, were valued at \$3,749,638, against \$4,386,863 in 1896. Of this sum, \$2,797,751 represents imports from the United Kingdom, and \$807,352 those from Germany. The chief decrease was in cotton and silk goods. There was also a decrease of 5,157 gallons in the quantity of spirits imported, as compared with the imports for 1896. A large increase in the importation of tobacco, chiefly from Great Britain, is also noteworthy. The value of the exports is not given; in 1896, they were stated at \$4,739,700. The production of rubber is decreasing, due to the reckless way in which it has been collected. The quantity shipped in 1897 was 4,458,327 pounds, against 6,484,365 pounds in 1896. export of palm oil also shows a serious falling off, from 3,154,333 gallons in 1896 to 1,858,968 gallous in 1897. This was probably due to the dryness of the past two seasons. Coffee and cocoa are being cultivated with success, and a new article of export has been found in mahogany, the value in 1897 having been \$30,659.

Niger Protectorate.—Statistics of trade in 1897 not being available,

those given in the Review of the World's Commerce, 1896-97, for the fiscal year 1896, are repeated. The imports in that year were \$3,649,700 and the exports were \$4,103,400. Nearly \$2,800,000 of the imports came from the United Kingdom; Germany sent goods to the value of \$254,000 and Holland some \$456,000 worth. Nearly 64 per cent of the imports went to the United Kingdom, 24 per cent to Germany, and 10 per cent to France. The exports from Great Britain to the Niger Protectorate, in 1897, were \$2,959,805, and the imports from the Niger, \$1,711,061.

### FRENCH WEST AFRICA.

Senegal.—According to French official returns, the imports into Senegal from foreign countries in 1895 (later years not given) was \$1,891,400, and the exports in the same year were \$617,600. The trade with France was: Exports from France to Senegal, \$2,779,200; imports into France from Senegal, \$2,161,600. These figures are also for the year 1895, but for 1896 they are stated as follows: Exports from France, \$2,759,900; imports into France, \$2,721,300. Combining the figures of trade with France and foreign countries, the total imports may be estimated at \$4,651,300 and the exports at \$3,338,900.

Other French possessions.—The following table, showing the commerce of French Guinea, the Ivory Coast, French Kougo, and Dahomey with foreign countries in 1896, has been compiled from colonial returns:

French Possessions.	Imports.	Exports.
Guines	733, 400	\$945, 700 424, 600 1, 022, 900 829, 900

Imports from France into above-named possessions were \$1,293,100; exports to France from above-named possessions, \$1,717,700; total imports into French West Africa (except Senegal), \$2,740,600; total exports from French West Africa, \$3,223,100.

The principal imports from and exports to France in 1896 are given

below:

### EXPORTS TO FRANCE.

· Articles.	Value.
Palm nuts	\$540, 400 328, 100 656, 200 96, 500
IMPORTS FROM FRANCE.	
Articles.	Value.
Articles.  Clothing Glass and earthenware Copper	\$193, 000

The Board of Trade Journal, London, December, 1898, gives the following statement of the trade of French Kongo in 1896:

Countries.	Imports.	Exports.
France and French colonies United Kingdom Germany Kongo Free State. Other countries	349, 390 155, 830	\$113, 560 371, 830 120, 908 141, 250 141, 980
Total	933, 706	889, 528

These figures are exclusive of reexports of imported goods to the value of \$34,309, principally to France and the Kongo Free State.

The Revue Coloniale, Paris, gives the following details in regard to the trade of Dahomey in 1897:

During the first six months of 1897, the commercial movement of the colony was

\$1,616,010, the imports being \$916,048, and the exports \$699,962.

The amount during the first six months of 1896 was \$1,891,014, of which \$944,431

The decrease in the value of imports and \$946,583 the exports.

The decrease in the value of imports and exports, compared with the same period of 1896, was caused chiefly by the long-continued drought throughout the whole colony, and especially in the region of the Popos. The harvests being poor, the imports naturally suffered.

The statistics show that there is a great disproportion between the diminution of imports and exports. This difference is due, in a great measure, to the fact that in 1897 the price of almost all merchandise has been increased, while that of almonds and palm oil, the chief exports, has been maintained at nearly the same as in 1896. The imports consist principally of distilled liquors, textiles, tobacco, salt, and foreign money.
Imports for the first six months of 1897 were as follows: Distilled liquors, 645,932

gallous; textiles of all kinds, \$142,272; salt, \$22,800; articles of gold and silver, \$27,990; tobacco, 493,117,000 pounds; powder, 244,552,000 pounds.

Exports for the first six months of 1897 were: Almonds, 16,707,000 pounds; palm

oil, 6,904,000 pounds.

The imports are chiefly from France, England, and Germany; the exports are to France, Germany, Lagos, and Togoland.

In Volume XIX of the Bulletin de la Société de Géographie Commerciale, Paris, appears an interesting article on economic conditions in French West Africa, from which the following is taken:

The only way to turn these colonies to account is to create means of communication. The English, the North Americans, and the Belgians commence by putting down rails in countries where Frenchmeu would say, "Nothing can be done." They know that facilities of communication will animate deserts. What profit would a merchant or a planter gain on an article that must be produced in the interior of a country, where means of transportation do not exist? Ordinarily, it would cost ten or twenty times more than its mercantile value. Certain articles, such as ivory, for example, find purchasers; but ivory represents only present wealth, and not a resource for the future. In Senegal, who would ever have dared hope for results as satisfactory as those of the railroad from Dakar to St. Louis? Yet what a desolate country this road traverses-lands parched and barren, with here and there a few Had not the necessity for rapid transit between the two towns been felt, the projector of the work would have been considered a fool. Those who are opposed to colonial extension should take note of the prosperity of this line, and of the existence of European villages wherever the means of creating the comforts of life can be found. If the Government possessed to-day all the money that the expeditions to the Soudan have cost, it would have enough to build a railroad from St. Louis to Lake Tchad. Is it practicable to push expeditions without having rapid means of communication behind them? Obtaining supplies under present conditions of transportation would cost enormously, from 1,000 to 12,000 francs (\$193 to \$2,316) a ton. It would be better to conquer a certain zone, maintain ourselves there during the time necessary for the construction of a railroad; then conquer a second zone, following with the road, etc. Employing soldiers as well as the natives for manual labor, a kilometer (0.62137 mile) of road would probably not cost more than 40,000 francs (\$7,720); 1,000 kilometers (621 miles) would then cost about 40,000,000 francs (\$7,720,000). France pays an annual subsidy of 9,000,000 france (\$1,737,000) for the

expenses of the Soudan. If for the last ten years we had had the will and the confidence which we lack in colonial matters, 4,000,000 francs (\$772,000) might have been employed each year for this object, and to-day we would have had 1,000 kilometers in place of the few of the so-called Sondan Railroad. The aim of the conquest of the Soudan is Tchad. A line of penetration starting from Cotonou, having Say for its objective point, would have a length of about 800 kilometers (497 miles). From Dakar to the same point it is about 2,250 kilometers (1,398 miles). The conquest of the Soudan by way of Senegal should stop, and we should install ourselves at Say. The annual grant of 9,000,000 francs (\$1,737,000) to the Soudan might be considerably reduced, and a portion employed in the construction of the road from Cotonou to Say. In the course of a few years we would have our railroad, a prosperous colony, and the conquest of the Niger would be accomplished almost in peace. The law requires of a French citizen three days per year in labor or money equivalent. Why is this not required of the negroes? It would seem natural to ask twice as much. The situation of our colonies is far inferior to those of other nations. If they were peopled with planters, merchants, and manufacturers, in place of being filled with officials, the governors would be forced to do what common sense demands.

#### LIBERIA.

No later figures of trade than those given in the Review of the World's Commerce for last year, are available. These covered the fiscal year 1896-97, and were: Imports, \$505,235; exports, \$689,031. The minister resident and consul-general at Monrovia, Mr. Smith, in a report which will be found in its proper place in Commercial Relations, says that trade with the United States is less than that with France or Holland. Germany has by far the largest share of the commerce, sending nearly two thirds of the imports; England follows in importance. Coffee is the staple product, and has recently declined in value. The same may be said of ginger and cochineal. Rubber, a comparatively new industry, is assuming importance as an article of export. It is unfortunate, says Mr. Smith, that there is no direct steamship service between the United States and West African ports. The trade is almost entirely carried by English and German vessels. In Liberia, especially, there is a constant demand for American products, and merchants use every effort to obtain them.

### KONGO FREE STATE.

According to official statistics, the total imports of the Kongo Free State in 1897 were \$4,266,000, of which some \$3,140,000 came from Belgium. The exports were \$2,950,000, some \$2,500,000 of which were sent to Belgium. The trade has more than doubled since 1893. The imports from the principal foreign countries in 1897 were:

Countries.	Value.	Countries.	Value.
England. Germany Holland France Italy Portugal Portuguese Possessions	225, 810 175, 630 54, 040 46, 320 28, 950	Zansibar Austria Switzerland Switzerland Sweden and Norway Denmark British East Africa colonics Canary Islands	10, 808 10, 615 3, 667 3, 667

The exports to the principal countries, apart from Belgium, were:

Countries.	Value.	Countries.	Value.
Portuguess Possessions England	231, 690 57, 909	Zanziber Germany German East Africa France.	\$28, 950 19, 300 5, 790 2, 702

# The chief imports in 1896 were:

Articles.	Value.	Articles.	Value.
Animals Firearms and accessories Steamers Wood, and articles of Beer and spirits Coal Provisions Flour Grain Fish, dried Rice Drugs Wearing apparel Locomotives Wagons	\$16, 724 100, 158 12, 569 38, 829 213, 844 34, 667 224, 804 48, 947 11, 270 74, 027 71, 550 24, 200 126, 470 52, 909 34, 553	Machinery Parts of machines Tools Articles of metal Building materials Rails Copper and brass wire Furniture and household goods Hardware Textiles: Cotton Wool Hemp and jute Glassware	\$16, 869 45, 151 25, 694 90, 639 40, 581 854, 224 76, 015 15, 453 76, 595 724, 944 52, 643 27, 117 34, 376

# The chief articles of export were:

Articles.	Value.	Articles.	Value.
Rubber	5, 217	Ivory. Palm nuts. Kola nuts	\$738, 480 221, 616 2, 515

In a report published in Consular Reports, No. 221, February, 1899 (Advance Sheets, No. 287, December 1, 1898), Consul-General Lincoln, of Antwerp, says that there are twenty-four commercial companies under Belgian management in the Kongo Free State, with a capital of about \$19,000,000. The colony is developing rapidly, and the establishment of steamship service between Antwerp and the Kongo is discussed. The railway has opened up Africa to Belgian enterprise. Trading posts will now be easily and regularly provisioned, and a number of products which could not be handled on account of the cost of transportation will now become the subject of a remunerative traffic, insuring to African trade an almost unlimited development. Mr. Lincoln gives the following recently published statistics in regard to the Kongo:

Number of Belgian inhabitants, 1,060; acres cultivated by the State, 24,710; under concession to private parties, 79,072,000; coffee trees, 4,000,000; cacao trees, 125,000; tobacco plants, 76,000; steamships on the Upper Kongo, 41; tonnage, 1,060.

### GERMAN WEST AFRICA.

The following details as to trade in Togoland, Kameroons, and German Southwest Africa are taken from a report to the British Foreign

Office by the secretary of the embassy at Berlin:

Togoland.—The imports in 1897 were valued at \$480,796 and the exports at \$187,608. The chief articles of import were: Cottons, \$111,930; stores, \$42,339; spirits, \$90,030; tobacco, \$39,419; linens, \$21,899; powder, \$22,386; iron, \$15,573; firearms, \$9,733; building wood, \$12,166; wine, \$10,220. The principal exports were: Palm nuts, \$103,656; palm oil, \$19,466; india rubber, \$59,371. There are 110 Europeans (102 Germans) in the colony.

United States Consular Agent Harris, in a report dated Eibenstock, December 20, 1898, says that according to a recent memorandum for the Reichstag, the number of plantations in Togoland is steadily increas-

Several capitalists have undertaken to redeem large tracts of arid soil in the interior for coffee cultivation.

Kameroons.—The value of the exports was \$901,748, the principal articles being palm oil and nuts, \$447,718; india rubber, \$199,527; ivory, \$121,663; ebony, \$111,930; cacao, \$38,932. The value of the imports was \$1,434,957. There is no classification of imports for 1897, but the following were the chief articles of import in 1896: Textiles, \$248,192; spirits, \$189,794; preserved food, \$131,396; iron, \$77,864; tobacco, \$72,998; salt, \$68,131; wood, \$68,131; powder, \$38,932; rice, \$38,932.

There are 253 Europeans in the colony, of which 181 are Germans. The rinderpest, according to Consular Agent Harris, has prevented

agricultural prosperity in 1897.

Southwest Africa.—The export trade was valued at \$303,363, of which \$36,499 went to Germany, \$5,353 to Cape Colony, and \$260,358 to England. Of this export, \$267,658 was guano, which went almost entirely to England. Other articles of export were hides, \$973, and ostrich feathers, \$12,166. The total imports were valued at \$1,187,426. Of this, \$335,789 was Government property; \$58,398 beer; \$194,660 preserved provisions, of which \$82,730 was imported by the Government; \$3,309 spirits; \$145,995 stuffs and fabrics. Of the total imports, \$217,046 came from Cape Colony, \$72,998 from England, and \$890,570 from Germany.

The German Colonial Company for Southwest Africa, adds the British report, is occupied in various agricultural and mining undertakings, and is beginning improvements at the port of Swakop Mouth. The projected Angra Pequena Railway has been surveyed. The rinderpest worked ravages, but on the introduction of Dr. Koch's method of inoculation, 80,000 cattle were saved. The European population of German Southwest Africa numbers 2,628, of which 1,221 are Germans.

Germany has about 41 per cent of the total trade of her African

possessions.

#### ANGOLA.

The most recent statistics of trade available, relate to the year 1896, and were quoted in the last edition of the Review of the World's Commerce. The imports in that year were \$4,050,295, against \$4,965,032 in 1895. The exports were valued at \$5,011,829, against \$5,455,331 in the preceding year. The decrease in the trade was due to the fall in the price of coffee. Portugal has the largest proportion of the com-

The following advice to exporters to Angola is taken from a report by the Belgian vice-consul at Mossamedes:

It is worthy of remark that every Boer farm possesses a kind of forge. Anvils of 66 and 110 pounds in weight are the only ones it is recommended to import. \* \* In Angola, as throughout the whole of South Africa, cattle are kept in the open, and often large properties have no fencing. The animals are branded with some distinctive mark, and it is impossible to have branding irons made in the colony. They are usually ordered from Lisbon. In the irons sent from Portugal the letters are fixed to a copper plate; but as they are not cut sufficiently in relief they produce when heated a wound which is unsightly after it has healed. It would be advisable to import iron letters, say initial letters, of from 1.9 to 2.3 inches. These should be made up so as to be attached to a handle made of iron here. chains for ox carts are sold, especially in the centers where the Boers are established. There is a great lack of these chains throughout the whole colony. It is advisable to introduce them in 7-foot lengths. Steel wire chains should be of the same length, and terminate in a well rounded-off eye of 2.3 inches in diameter. nized iron wire is beginning to be used for fencing. The padlocks sold here are small copper ones, imported in cardboard boxes of 1 dozen from Birmingham. There is a great demand for them in all sizes. In common perfumes, there is a splendid

Digitized by GOOGLE

business to be done with the Portuguese trading firms on the coast. The chief demand is for eau de cologne, aromatic waters, and hair oils. Single-burner oil stoves are sold; they are of copper, the upper part being of brass. They should have but one burner. Photograph albums are in great demand among the Boers. Accordious enjoy a considerable sale. The class of plow made in the United States is mostly sold among the Boers in the interior. They come via Cape Town. The most popular is Eagle No. 75, made by Farquhar & Co., of New York. It would be advisable to import No. 25 of the same model, which, being suitable for donkey traction, would have an easy sale. Saws are of great importance in the interior of the country. The following types are recommended: Trimming saws for forest work, triangular teeth, steel sockets, two handles, length of blade, 50 to 72 inches; single-handled saw, length of blade, 1.09 yards; ordinary handsaw, American type, length of blade, 22.6 inches. The last named is the type most frequently found in the interior. Saws with teeth arranged like those of trimming saws will be most in demand.

## SOUTH AFRICA.

Consul-General Stowe gives the imports of all South Africa in 1897 as \$113,529,840, divided as follows: Cape Colony and dependencies, \$77,511,895; Natal, \$27,474,805; Delagoa Bay (Lourenço Marquez), \$8,542,940. The goods imported for consumption were distributed as follows:

Country.	Value.
Cape Colony Rhodesia South African Republic Orange Free State	\$50, 139, 240 2, 028, 710
South African Republic. Orango Free State.	44, 047, 23 4, 933, 11
Natal	11, 525, 23 856, 12

Of these imports, Great Britain supplied some \$38,000,000; the United States \$13,000,000, and Germany \$5,000,000.

The exports of South Africa were \$98,927,325, of which Cape Colony sent \$36,209,660; the South African Republic, \$54,481,510 (including gold); the Orange Free State, \$4,069,300, and Natal, \$3,536,855.

Trade in South Africa, says Mr. Stowe, has untold possibilities, but one of its obvious features at present is the foothold gained by United States goods. While our trade is mainly in food stuffs, other lines have been rapidly coming to the front, and with proper effort, the market can be retained.

In electrical goods and appliances, articles of iron and steel, galvanized iron steam and water piping, tools, shovels, hoes, forks, silverplated ware, hardware, furniture, house furnishings, and window glass, the trade held its own in 1897. An improved demand for drilling and hoisting machinery as well as for oil gas engines, is noticed. England sent more goods in 1897 than ever before. Germany recognizes the importance of the market, and through her new steamship line and low rates of freight is preparing to foster her trade. She is imitating the United States in goods and methods of packing. To show her trade on the east coast, it can be stated that during January, 1898, out of a total tonnage of 22,496 tons discharged at Delagoa Bay, British ships delivered 8,290 tons, and German, Norwegian, and Swedish ships 11,334 tons. Of this, lumber represents 9,878 tons; railway material, 2,034 tons; coal, 400 tons; and general merchandise, 10,184 tons. Germany is sending to South Africa a monthly trade and export journal, the purpose of which is to make German industry known to the world's markets and to prove its ability to compete with all civilized nations.

In the trade with United States, the principal increases in 1897 were:

Value.	Articles.	Value.
\$284, 659. 50	' 011-	
112, 970. 70 12, 519. 36	Mineral Vegetable	841, 606, 46
17, 024, 58 171 per cent.	Tobacco (raw)	98, 630, 84
	\$284, 659. 50 21, 199. 04 112, 970. 70 12, 519. 36 17, 024. 58 171 per cent.	\$284, 059. 50 Clocks and watches

In the first part of 1898, says the consul-general, there was a decrease in imports from the United States, owing to the war with Spain, but an improvement is now visible, and steamers are arriving weekly with full cargoes. The imports of wheat and of preserved meats have increased. Details as to the trade of the different countries are given below.

### CAPE COLONY.

For the twelve months ended June 30, 1898, Cape Colony imported goods to the value of \$82,672,530, and exported goods to the value of \$115,106,458. From the imports, there should be deducted the goods entered for consumption in the Orange Free State, the value of which is not given, and goods entered at the custom-house for removal to states outside the union, the value returned being \$19,536,564. Even with these reductions, the total imports for Cape Colony are high as compared with former years.

The exports of colonial produce proper were \$19,915,348; of diamonds, \$22,467,678; of gold (from the Transvaal), \$64,754,520.

Among the principal imports during the first six months of 1898

were:

Articles.	Value.	Articles.	Value.
Apparel Wheat Cotton goods Haberdasbery and millinery Hardware and ironmongery Machinery Vőhicles Fuel	1, 811, 078 2, 658, 476 2, 781, 769 2, 051, 828 2, 540, 021 583, 274	Drugs Corrugated and galvanized iron Shoes and leather manufacturings Meats, salt and proserved Stationery and paper Sugar, unrefined Woolen manufactures	\$748, 813 583, 396 1, 342, 445 506, 033 671, 431 891, 679 984, 298

#### NATAL.

There was an increase during 1897 in imports of liquor, tobacco, etc., as follows: Ale and beer, 28,533 gallons; whisky, 4,000 gallons; manufactured tobacco, 25,600 pounds; cigars, 2,400 pounds. Imports from Australia decreased 50 per cent, chiefly in flour. Details of some of the imports for the past two years are:

Articles.	1897.	1896.
Plonr	1. 219. 317	47, 298, 962 553, 752 6, 807 643, 000

The value of the goods sent in transit to other countries was:

Countries.	1897.	1896.
South African Republic Orange Free State Griqualand, East Pondoland Bassutoland Mashowaland	132, 860 32, 951 11, 178 3, 747	\$2, 752, 234 147, 791 35, 769 10, 424 6, 842 204
Total	2, 876, 426	2, 953, 264

## The imports from the principal countries were:

	·	
Countries.	1896.	1897.
United Kingdom	\$17, 628, 278	\$20, 305, 549
Austrumsia		329, 623 924, 566
North America		8, 182, 627
South America Continent of Europe	563, 896 2, 671, 145	537, 388 3, 315, 635
Continue of Datope	-, 512, 125	1 4,020,000

There was a decrease in the value of colonial products exported, due to the rinderpest, locusts, and drought.

# MOZAMBIQUE.

Consul Hollis, of Lourenço Marquez, gives the following statement of imports and exports at the ports of Lourenço Marquez, Mozambique, Chinde, Villiman, and Inhambane in 1897:

Imports.	Imports in transit.	Exports.	Reexports.
. \$1, 201, 290	\$42,573	\$183, 982	
2, 465, 185			\$132, 719
_, _, _,	1,	1	,
92, 236	453	382, 607	4, 442
331, 819

			1, 733
	\$1, 201, 290 2, 465, 185 92, 236 331, 819 206, 674 315, 186 60, 720 186, 938	#1, 201, 290	\$1, 201, 290

# Summarizing these statements, we have:

Imports	<b>\$5, 113, 232</b>
Imports in transit	12, 927, 688
Exports	791, 191
Reexports	258, 923

Consul Hollis says that electric lights and railways have been established in Lourenço Marquez. A Canadian firm has secured a concession to operate a flour mill. There is a disposition on the part of financiers to invest money in the colony.

#### SOUTH AFRICAN REPUBLIC.

The Moniteur Officiel du Commerce, Paris (July 21, 1898), says that the import trade is divided as follows: Europe, 63.6 per cent; Cape Colony, 10.5 per cent; Natal, 9.5 per cent; Delagoa Bay, 6 per cent; Orange Free State, 6.4 per cent; other countries, 4 per cent. Consul Hollis, of Lourenço Marquez, estimates the production of coal in 1897 at 1,327,000 tons. According to statistics transmitted by Consul Macrum, of Pretoria, the gold output in 1898 is estimated at about 4,000,000 ounces.

The British vice consul at Johannesburg gives the following details

as to trade:

The import of railway material in 1897 figures at £869,443 (\$4,231,144), an increase of £237,504 (\$1,155,813) over the previous year. Machinery was in 1897, as in 1896, the largest item in the imports, figuring in the former year at £1,876,391 (\$9,131,457). There is a large decrease in this line, however, owing to the fact that the demand for machinery is shrinking on account of the almost entire cessation of the development and equipment of fresh mining properties. The mines that are working are fully equipped, and the current year will probably show a further decrease.

The import of beer in 1897 was £47,108 (£229,251); there has been no material fluctured in the control of the latter of the control of the latter of the control of the latter of the control of the latter of the control of the latter of the control of the latter of the control of the latter of the control of the latter of the control of the control of the control of the latter of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of t

tuation in this item since 1895. The bulk of the beer imported comes from Germany, Sweden, and the United States. There are several local breweries, with a good and cheap product. The importation of liquors has increased during the last three years, amounting in 1897 to £239,900 (\$1,167,473); over-sea imports in this line are chiefly from Great Britain.

The leatherware imported in 1897 was valued at £462,391 (\$2,250,226), showing a decrease of 2.9 per cent from 1896. Boos and shoes are the largest items in this class, and they are mostly of British manufacture. Furniture was valued in 1897 at £317,636 (\$1,545,776), or a decrease from the preceding year of 12 per cent. The figures for 1896 were large, showing the prosperity enjoyed by the State during that year; but house furnishing is now at a standstill, and a large reduction in this article of import may be expected during the current year. The United Kingdom, Germany, Austria, and the United States are competitors in this line.

The importation of butter (including butterine, glee, and margarin) was £158,867 (\$773,123). Imports in this line have steadily increased, and on account of the ravages of the rinderpest there now exists a good market in South Africa for this article. Provisions and groceries include condensed milk to the value of £33,322 (\$162,162) in 1897. Woolen blankets were valued at £164,044 (\$798,320). The Transvaal affords a good market for ready-made clothing, as, excepting the higher class Europeans, the community generally, including the Boers, seem to prefer this kind of garment.

The natives are also extensive purchasers.

German trade decreased in 1897 from 1896. The trade of the United Kingdom with South Africa is increasing year by year, but the United States is making still greater progress. The excellence of American packing is appreciated, and in some lines progress. The excellence of American packing is appreciated, and in some times British goods are being displaced by American; for instance, household pumps, edge tools (including saws), shovels, picks, lawn mowers, and carriages.

The Board of Trade Journal, London, October, 1898, gives the following figures, comparing the import trade in the Transvaal for the half years ending June 30, 1897, and June 30, 1898: General imports in 1897, \$35,425,536; in 1898, \$25,272,800. Decrease for 1898, \$10,152,766, or about 28 per cent. The following table shows the decline in a few articles of import:

Articles.	1897.	1898.
Reer Spirits Wine Musical instruments. Clothing	\$129, 735 860, 207 360, 248 116, 923	\$90, 887 575, 142 198, 918 57, 955 197, 891

### ORANGE FREE STATE.

The Moniteur Officiel du Commerce, Paris, August 11, 1898, gives the following statistics of the Orange Free State as to imports during 1897:

Articles.	Value.	Articles.	Value.
Boverages, wines, liquors Butter and cheese Coffee Cotton and its manufactures. Drugs and chemicals Furniture Grain Iron and hardware Leather and its manufactures Machinery and parts of Maize Mercery	\$165, 536 17, 611 201, 835 483, 113 114, 970 128, 885 251, 754 285, 516 201, 285 219, 977 179, 268 861, 562	Preserved meats, fruits, and vegetables Sheet iron, galvanized Sugar Tobacco leaf and manufactures Wearing apparel Wood and its manufactures Other Total	216, 652 30, 998 367, 906

The Board of Trade Journal, London, December, 1898, says that according to statistics quoted by the Castle Mail Packet Company, the exports of the Orange Free State in 1897 were \$10,877,030. Diamonds figured for \$2,145,951 in the exports. There was an increase in both imports and exports over 1896. The chief destination of the merchandise of the Orange Free State is the Transvaal, the value of goods exported thither having been \$4,242,313 in 1897. The trade last year was greatly interfered with by the rinderpest and drought. The export of wool, hides, cattle, etc., increased; but there was a notable falling off in the value of ordinary agricultural produce.

### BRITISH POSSESSIONS IN CENTRAL AFRICA.

The British Central Africa Protectorate (formerly Nyassaland) imported in 1897, according to official returns, to the value of nearly \$400,000 and exported some \$115,000. Basutoland (northeast of Cape Colony) imported in the fiscal year 1897-98 nearly \$500,000 worth, and exported \$990,000. The imports of Rhodesia through Cape Colony were \$569,000. Railroads and telegraph lines are in operation in Rhodesia and Bechuanaland, and 7,100,000 acres in Chodesia have been registered as farms.

### EAST COAST.

The commerce of the East Coast of Africa is mainly conducted through ports of Madagascar, Zanzibar, Réunion, Mauritius, and German East Africa. Madagascar and Réunion are Freuch colonies; Mauritius is a British colony, and Zanzibar a British protectorate. Mozambique, for trade reasons, is classed with South Africa.

### MADAGASCAR.

United States Consul Gibbs says that the imports in 1897 were valued at \$3,535,199 and the exports at \$823,075. The figures for 1896 were: Imports, \$2,862,975; exports, \$1,156,368. Hides, golddust, ebony, wax, rafia, and rubber were among the principal exports. The chief imports into Tamatave were: Cotton cloth, \$1,090,297; tinware, \$10,345; tobacco, \$20,780; ironware, \$60,162; wines, \$229,046; beer, \$22,477. The increase in the tariff on goods coming from countries other than

Digitized by GOOGIG

France, says Consul Gibbs, has caused depression in trade. Cotton goods have suffered especially, the duties being between 50 and 60 per cent of their value. Efforts are being made to prevent native merchants selling goods of English or American manufacture, and firms at Tamatave take off the American trade-mark from the goods they sell on the coast. There will always be more or less trade in United States cottons, however, on account of the popular demand.

The following details of commercial conditions in Madagascar, from the Revue du Commerce Exterieur, of Paris, will be found of interest:

Most of the Europeans settled in Madagascar are of French origin; nevertheless, for a number of years England has had a more active commerce with the island than France. Apart from the limited number of planters and European officials, the island of Madagascar is peopled all along the seacoast by negroes. In the interior, the Hovas of the Malay branch predominate. The natives on the coast—whatever may be the names of their tribes—have few wants; they ask for nothing more than cotton cloths and rum. The Hovas of Emyrne are more civilized. Besides cotton fabrics (the only material used in the dress of the lower classes) they appreciate silk goods, toilet articles, and other inxuries of European life. But as the rich are a feeble minority, the ordinary textiles, of which the natives make their lamba (cotton pantaloons), form the bulk of importations. In 1896, there were imported 6,252,000 francs' (\$1,206,636) worth of cotton cloths, of which Great Britain and India furnished the greater part. North America exports to Madagascar textiles of soft-finished cotton which are highly appreciated by the natives. In 1896, France imported textiles of cotton to the value of 551,628 francs (\$106,464); and, with the aid of the protecting duties, the French manufactures should replace those from America. The United States exported to Madagascar, in 1896, 2,150,000 francs' (\$414,950) worth of cotton cloth.

Drinks form another important article of importation. Naturally, French productions are first in the market. Wines, especially good brands, are used by the Europeans and by some native dignitaries. At Tamatave, the great port on the castern coast, where the foreign population is relatively large, wine sells for 60 to 75 centimes (12 to 15 cents) per liter (1.0567 quarts). The price in the other ports should be nearly the same, but in the interior, notably at Tamanarivo, to which transportation must be effected on the backs of men, the price reaches 2.40 to 2.50 francs (46 to 48 cents) per liter (1.0567 quarts). The natives are great lovers of a detestable but very cheap rum, which comes to them from Mauritius. Brandies, absinthes, vermouth, bitters, and other liquors are imported from France. Counterfeits of French brands come via Hamburg. Beer is either German or English. At Tananarivo, a brewery supplies a light beer, which is sold for 40 centimes (7.7 cents) a bottle.

The importation of articles of metal amounts to 1,142,000 francs (\$220,406),

divided as follows:

Countries.	Amount.
England France Germany	France. 642,000 \$123,906

Hamburg monopolizes the production of saucepans, an essential article of Malay furniture. French manufacturers should turn their attention to this article, procure models, and profit by the new customs duty. English merchants find ready sale for galvanized sheet iron and tin plate, which are much used in tropical constructions. No other branch of importation reaches 1,000,000 francs. Farinaceous foods, of Farinaceous foods, of which three-fourths come from England, amount to 668,000 francs (\$128,924).

The imports in 1896 were from the following countries:

Countries.	Amount.
England, India, Mauritius, and other British possessions. France United States Germany	Francs. 5,749,000 \$1,109,557 3,280,000 633,040 2,486,000 479,798

Norway, Denmark, Switzerland, Spain, and Portugal figure for some thousands or tens of thousands of francs in the import trade.

### GERMAN EAST AFRICA.

A British Foreign Office report (No. 474, Miscellaneous Series) gives the trade of German East Africa in 1897 as follows: Imports, \$2,330,328; exports, \$1,272,750. Nearly half of the goods imported came from India and Great Britain, about two sevenths from Germany, and the rest from France, Belgium, Holland, America, Arabia, and Zanzibar. The principal articles of import were cottons, rice, and provisions. The exports consisted chiefly of ivory, india rubber, corn, sesame, and copra. Most of the exports went to Zanzibar, Germany following in order of importance.

### ZANZIBAR.

According to a British foreign office report, imports into Zanzibar in 1897 were valued at \$6,808,613—\$601,538 in excess of those of 1896, and the highest ever reached in the country. Exports were valued at \$5,789,519, against \$5,629,329 in 1896. Trade with the principal countries was:

Countries.	Imports.	Exports.	Countries.	Imports.	Exports.
IndiaGreat Britain Gormany	475, 944	162, 400	America Netherlands France	298, 316	\$44, 500 76, 300

Imports from all the above countries show an increase in 1897, except America, which fell off from \$437,985 in 1896 to \$266,198 in 1897. This was chiefly in petroleum, although over \$17,033 less in piece goods was sent in the last named year. Great Britain has the largest share of the import trade, but if the item of coal were omitted, it would be found that the manufactured articles from Germany were slightly in excess of those from the United Kingdom. The value of the piece goods brought into Zanzibar in 1897 was three times as great as that of any other article, and constitutes one-fourth of the entire import trade. The countries which ship this class of goods are British India, Holland, The Brit-Great Britain, America, and Germany, in the order named. ish consul says that the most important class of piece goods is a species of unbleached cloth, which is in universal request throughout the interior, and forms in some parts of the country the only currency. is known as greycloth, and is made in two qualities, the better kind being known as "Americani," from the fact that America was the first country to introduce it. It is an excellent quality of cloth, and is very popular. The cheaper goods are sent from India.

In a report published in Consular Reports No. 217, October, 1898, (also in advance sheets No. 215, September 10, 1898), United States

Consul Billheimer, of Zanzibar, says:

The possessions of the Sultan of Zanzibar now comprise the islands of Zanzibar and Pemba, which are directly under the Sultan's government, and a strip of land on the coast of Africa 10 miles inland from the sea and some 200 miles in length, which is farmed out to the British, and is the outlet for British East Africa and Uganda; also four small districts lying on the coast, known as Magadisha, Merka, Brawa, and Warscheik, leased by the Sultan to Italy.

The people of the rural districts of the islands of Zanzibar and Pemba are Arabs and the natives Swahilli, the Arabs being principally the ruling class and the Swahilli the laboring class. The Swahillis are an inoffensive, half-indolent people, with fair native intelligence, quick to learn, much devoted to their Mohammedan religion, and very loyal to the Sultan and the few white people who belong to his Government and to the English protectorate. These people cultivate the sweet potato, manioc, mohogo, a variety of small indian corn, beans, pease, sugar cane,

rice, pumpkins, yams, tomatoes, mandarins, oranges, bananas, shuck-shuck, cocoanut, and cloves; also some other varieties of vegetables and fruits. They also raise many goats and cattle for their meat and for the milk they yield.

The city of Zanzibar contains a population estimated at 100,000, consisting of Arabs, Swahillis, English, Germans, French, Italians, Portuguese, a few Americans, and a great number of Hindoos of various castes, and all forming an active but quiet and peaceable population. The city is now, and has been for centuries, the great emporium for trade with all central East Africa, being the receiving and distributing point for imports and exports.

point for imports and exports.

The Government of Zanzibar is a sultanate, presided over by a sultan, His Highness Soyyid bin Hamoud bin Mahommed, and his official staff and subordinates. The Government has no currency, the Indian rupee and fractional parts thereof being the medium of exchange, the rupee being at this time worth about 32 cents in United States gold, but continually fluctuating. The revenues of the Government are approximately £600,000 per annum, derived from customs dues, water supply, registration, rents of Government property, port dues, shipping, and the post-office. The expenditures about equal the revenues. Zanzibar has no public debt. There is no tax levied on personal property or real estate.

Zanzibar is practically a free port, spirituous liquor and medicines containing

spirits, fireams and ammunition, opinm, tobacco. rice, and grain being taxed 5 per cent ad valorem. All imports to Pemba pay 5 per cent duty.

Duties on exports from Zanzibar are as follows: Beans, millet, and corn, 25 cents on each 360 pounds; chillies, 10 per cent ad valorem; cloves, 25 per cent ad valorem; sea shells, 5 per cent ad valorem; gum copal, 15 per cent ad valorem; peanuts, 12 per cent ad valorem; goats, 25 cents each; rubber, 15 per cent ad valorem; hides, orchilla weed, and tortoise shells, each, 10 per cent ad valorem.

Foreign purchasers of goods for export, as a rule, are expected to pay cash for the goods when purchased, and foreign shippers are paid cash for goods imported.

Zanzibar has no manufactures or mechanical industries of any kind, except the

making of ornaments from ivory, ebony, and silver, a small amount of rough furni-

ture, and artificial ice.

The only illuminating oil imported is American petroleum. Plain American cotton goods are preferred by the natives to all others, although a great many cottons of Dutch manufacture are imported and worn by the native women. These last are prints in many flashy styles, in fast colors, and should be duplicated by American firms, as I fully believe they would displace the Dutch article, the people taking kindly to everything American.

The internal trade of Zanzibar is quite extensive, but no statistical information is obtainable as to its amount, and nothing like an accurate estimate can be given.

The following ocean lines call at Zanzibar regularly: The British India Steam

Navigation Company, making direct connection with other steamers of the company for points west and London; the Messageries Maritimes de France, between Marseilles and Zanzibar; the Deutch Ost-Afrika Linie, from Hamburg to Zanzibar and the There are also several lines of coasting vessels.

The Moniteur Officiel du Commerce, Paris, July 7, 1898, says that the exports from Zanzibar in 1897 (taking the value of the merchandise at the point of departure) were:

For-	Value.	For—	Value.
England	\$533, 750 256, 200 114, 223	Other European countries	\$12, 810 147, 315

The exports are composed mostly of cloves and copra, the sole agricultural productions of Zanzibar. The first of these products is distributed among England, America, France, and Germany, while France consumes the whole of the production of copra. The quantity exported in the last four years was as follows:

Years.	Pounds.	Years.	Pounds.
1891.	12, 151, 755	1896.	13, 117, 370
1893.	12, 612, 517	1897.	13, 117, 370

#### BRITISH EAST AFRICA.

According to official statistics, the value of exports from Great Britain to the British East African protectorate, in 1897, was \$933,395, and of imports into Great Britain from the protectorate, \$4,238. The Statesman's Year-Book, 1898, estimates the value of the total imports at \$1,256,160, and of the exports at \$375,040. The chief exports are ivory, rubber, animals, copra, gum copal, hides, etc. The imports from Great Britain are Manchester goods, brass, wire, beads, provisions, etc. Consul Billheimer, of Zauzibar, in the report above quoted, adds the

following details:

To some extent, the foreign trade of central East Africa has, in the last two or three years, been diverted from Zauzibar City to the coast towns on the African coast, principally to Mombasa in the British East African protectorate and to Tonga and Dar-es-Salaam, in the German East African protectorate. As these portions of Africa develop, these cities will draw more from the Zanzibar trade.

British East Africa and Uganda, extending from the east coast to Lake Nyanza and beyond, has a great future before it. A land mostly well watered, with good soil, and for the greater part occupying a high plateau, with a pleasant and healthful climate, adapted to the culture of wheat and corn and all kinds of vegetables and fruits—those of the temperate as well as the tropical zone—will develop into a great country. A railroad from Mombas on the coast to a point on Lake Nyanza is now being built. It is now completed a distance of 180 miles, and passes within 40 miles of Mount Kilima-Njaro, the highest mountain of Africa.

#### MAURITIUS.

The imports in 1896 (no later figures than those given in the Review for last year being available) were \$7,534,000, of which nearly \$6,000,000 worth was furnished by Great Britain and British possessions. exports were \$7,914,000, of which \$66,000 went to Great Britain, and \$6,627,000 to British possessions. A report in the Moniteur Officiel du Commerce (Paris, March 10, 1898) says that the United States sent some \$175,000 worth of goods in the year under consideration. The following details of trade are from the same report:

Australia, formerly the greatest market for the sugars of Mauritius, now receives but one-tenth of the exportations; the shipments to the west coast of Africa, on the contrary, increase from year to year. Transactions with the United Kingdom and France have remained nearly stationary for the last twenty years.

Mauritius, producing only sugar, imports from the outside world everything necessary for food, clothes, and the different needs of its 375,000 inhabitants. Below is a

list of the principal imports in 1896:

Articles.	Value.	Articles.	Value.
Grain and flour Groceries and provisions Drinks Oil Coffee. Textiles and apparel Mercery and articles de luxe Leather, and manufactures of Hats and parasols	400, 000 500, 000 350, 000 90, 000 700, 000 200, 000 70, 600	Fertilizers. Drugs and chemicals Coal Metals and machinery Hardware and cutlery Crockery and glass Wood Tobacco Paper and books.	550, 000 250, 000 250, 000 190, 000 40, 000 125, 600 90, 000

The chief exports from Port Louis were:

Articles.	Value.	Articles.	Value.
Sugar	70, 400	Fiber of aloes Vanilla	\$70, 000 30, 000

Sugar may be said to be practically the only production of Mauritius, so unimportant are all other articles.

United States Consul Campbell writes from Port Louis that the sugar industry is suffering severe depression.

### RÉUNION.

According to French official statistics, the imports into Réunion from foreign countries in 1896 were \$1,677,100, and the exports to foreign countries, \$135,100. These figures are exclusive of the trade with France, which was: Imports into Réunion from France, \$2,026,500; exports from Réunion to France, \$3,358,200. The imports from France show an increase of over \$96,500, and the exports to France, an increase of \$6.56,200, as compared with the previous year. The following table will show the chief articles imported from France:

Articles.	Value.	Articles.	Value.
Wines Cotton goods Woolen goods Clothing	\$416, 880 357, 050 92, 640 27, 620	Soaps and perfumes Tools and iron articles Leather, and articles of Machinery	\$63, 690 61, 740 123, 520 65, 620

Sugar was exported to France to the value of \$2,509,000, and vanilla, \$308,800.

# NORTH AMERICA.

## DOMINION OF CANADA.

The trade of the United States with Canada during the last ten calendar years, according to returns of the Bureau of Statistics, Treasury Department, was:

	In	oports from Canada.	Exports to Canada.
889		39, 322, 578	\$40, 973, 31
890		39, 739, 009	38, 629, 367
891		36, 551, 672	41. 686, 883
892		35, 930, 456	39, 564, 40
893		34, 492, 332	57, 121, 170
894		32, 146, 069	51, 294, 199
895		40, 748, 940	58, 398, 609
896		37, 355, 805	62, 335, 303
897		38. 8.19. 873	72, 627, 69
898		30, 450, 208	90, 454, 86

These figures, it should be noted, do not include the trade with Newfoundland and Labrador, which was, in 1898: Imports, \$336,303; exports, \$1,354,731.

Consul Beutelspacher, of Moncton, sends figures showing the imports and exports of Canada in the fiscal years ending June, 1897 and 1898, as follows:

#### IMPORTS.

	1897.	1898.
Total value of goods imported.	\$119, 218, 609	\$140, 305, 956
Total value of goods imported	74, 108, 590	84, 126, 984
Portion free	45, 110, 019	56, 178, 966
Total value of goods entered for consumption	111, 294, 880	130, 678, 807
Dutiable goods imported from Great Britain	20, 190, 468	22, 935, 666
Free goods imported from Great Britain	9, 149, 108	9, 941, 37
Total imports from Great Britain, dutiable and free	29, 339, 576	32, 877, 043
Dutiable goods imported from United States	39, 534, 792	45, 827, 14
Dutiable goods for consumption from United States	30, 482, 509	37, 674, 086
Free goods imported from the United States	81, 231, 524	40, 760, 337
Total imports from United States, dutiable and free	70, 766, 316	86, 587, 48

## Consul-General Bittinger, of Montreal, says:

The course of the trade of the United States with Canada has for some years been one of expansion. Variations in its amount have occurred, owing to tariff changes and the lower or higher capacity of the Canadian people to purchase foreign goods, but these variations have been only temporary in their effect when they restricted the imports into Canada of goods from the United States.

A comparison of the statistics of imports of manufactured goods from the United

A comparison of the statistics of imports of manufactured goods from the United States into Canada from 1893 to the close of the last fiscal year, ending June 30, 1898, with the statistics of imports from Great Britain into Canada for the same period, shows with striking clearness the fact that the United States has been gradually but steadily capturing more and more of this trade, while Great Britain during the same period has been losing its hold.

The following is a list of the goods imported from Great Britain into Canada the import of which in 1897 was less than in 1893, while the import of the same class of goods from the United States exceeded that of 1893:

Articles.	Increase of imports from United States into Canada in 1897 over 1893.		ts from importo d States from Articles.  Great Brit. Articles.  1897 Articles.		Decrease of imports from Great Brit- ain in 1897 from 1893.
Braces and brushes	\$18,500	\$7,500	All other fron goods	1, 541, 000	3, 613, 000
Carpets	31,000	44, 000	Tin goods	61, 000	103, 000
Carriages	1, 800, 000	131,000	Sundry metal goods	310,000	323, 000
Watches and cases	110,700	8, 300	Scientific instruments.	2, 900	37, 000
Cordage	54,000	35, 600	Paints and colors	76,000	79,000
Cotton goods	15,000	752,000	Silks and ribbons	34, 400	146, 400
Glass and crockery	37,000	138, 000	Dress and piece goods.	31,000	171, 100
Hats, caps, etc	176, 000	265,000	Umbrellas	800	173,000
Jewelry, etc	74,000	32,000	Wood, and manufac-		·
.,	·		tures of	735, 000	30,000
Agricultural imple-			Wool and woolen		· .
ments	356, 000	3, 300	goods	18,000	4, 438, 600

The above list practically includes the great bulk of the manufactured goods imported into Canada from the United States and Great Britain. In builders' and cabinetmakers' hardware, the goods made in the United States have almost achieved a monopoly, as have also brass tubing and other brass goods. It is the opinion of importers of such goods from the United States as come more or less into competition with those from Great Britain, that the discrimination in favor of British goods of a 25 per cent reduction in duty will have only a trilling effect, if any at all, upon the volume of imports from the United States. Canadian consumers of the leading articles made of iron or steel, or a combination of them, and of other metallic goods, show such a decided preference for those made in the United States, that they will not take British goods, even if the preferential duty causes them to be proportionately lower in price. At the same time, they consider it would be well for United States manufacturers to avoid presuming upon the advantage they have acquired, by indifference to the quality of the goods they send to Canada, by less careful packing, or by neglecting to keep in close and constant touch with importers, whose ideas as to local tastes and requirements should be carefully studied, and as far as possible, met.

In regard to the effect of the preferential tariff on imports from Great Britain, Commercial Agent Hunt, of Palmerston, sends a newspaper clipping, showing that for the four months ended October 31, during which the 25 per cent preference has been in force, the imports of British goods increased in spirits, wool, linen manufactures, worsted goods, dyed, printed, and bleached cottons. The article continues:

In the exportation [from Great Britain] of iron and steel, and manufactures thereof, there has, however, been a falling off rather than an increase, notwithstanding the operation of the full preference of 25 per cent, while from the United States our imports have noticeably increased. For instance, we received from Britain during the first four months of the past fiscal year but \$17,617 worth, and during the corresponding period of the present year \$18,014, as against \$79,509 during the four months of 1896. During the latter period also, railroad iron and steel exported to Canada from the United Kingdom was valued at \$605,577; during the four months of 1897, the export was \$124,061, and during the four months ending October 31, only \$50,366.

These and similar decreases more than offset the general tendency to increased

export in the lines of goods above mentioned.

The statement is made unofficially, in explanation of this showing, that the disposition to avail of the benefits of the preferential cut is offset by a tendency on the part of the Canadian importers to await the outcome of the present reciprocity negotiations at Washington before transferring orders from the United States to British houses. As for the failure of the preferential tariff to encourage the importation of British as against United States iron and steel, it is candidly enough admitted that even with the 25 per cent advantage, it would be impossible for British manufacturers to compete with the Americans in Canadian markets.

Consul-General Bittinger further says:

The wood-pulp and paper industry of the Dominion of Canada is advancing with giant strides. English and Canadian syndicates are being organized, with immense capital, to erect new mills and purchase vast areas of spruce timber lands. The extent of the pulp-wood resources of this country is enormous. From Hamilton Inlet, on the northeast coast of Labrador, one might travel southwest around James Bay and then northwest to the valley of the Yukon River, and never in that great distance be out of the region of spruce forests. Or a journey might begin near the southern boundary of New Brunswick and continue northwest to Portland Promontory, more than halfway up the east coast of Hudson Bay, and thence across the country again in an easterly direction to Ungana Bay, and still the traveler would never be out of a spruce-bearing territory. In these vast reserves of spruce timber, many citizens of the United States have already secured large holdings and are engaged in the pulp industry, and the water power utilized in connection therewith is unsurpassed in the world.

Consul Ledoux, of Three Rivers, gives the value of the gold mined in Canada in 1898 as \$13,700,000, of which \$10,000,000 represented the yield of the Yukon district.

Consul McCook, of Dawson City, says that platinum has also been discovered in the Yukon. He reports that the prices of provisions are high, and there is much suffering.

Consul Smith, of Victoria, says that, according to a recent law, mining

in the Lake Atlin region is restricted to British subjects.

#### MEXICO.

The Bureau of Statistics of the Treasury Department gives the following figures of United States trade with Mexico in the last ten calendar years:

Year.	Imports from Moxico.	Exports to Mexico.
1889	\$23, 314, 744 23, 327, 396	\$13, 212, 773 13, 822, 796
1891 1892 1893	28, 910, 147 29, 413, 875 32, 372, 998	15, 371, <b>37</b> 0 16, 391, 274 16, 551, 255
1894 1895 1896	18, 207, 433 15, 887, 091	13, 412, 502 16, 696, 225 22, 474, 856
1897. 1898.	19, 650, 099 21, 670, 775	21, 061, 152 23, 106, 018

Consul-General Barlow, of the City of Mexico, in a comprehensive report upon commercial and industrial conditions in the Republic, says that the total imports in the fiscal year 1898 were \$43,603,492, against \$42,204,095 in 1897. The imports from the principal countries were:

Countries.	1897-98.	1896-97.	Countries.	1897-98.	1896-97.
Germany. Austria Belgium Spain United States.	125, 144 590, 196 2, 039, 132	\$4,003,263 128,367 479,850 1,983,794 22,593,860	France Holland England Italy Switzerland	103, 913 8, 105, 696 186, 273	\$4, 989, 082 132, 728 6, 881, 701 184, 186 163, 293

Of the exports, amounting to \$58,166,719 in 1897-98, \$42,833,552 went to the United States, or 73 per cent of the total amount exported from Mexico, as against 77 per cent in 1896-97. Mr. Barlow adds:

The increase of \$2,953,500 in volume is very satisfactory, and, in the face of the higher duties imposed by the Dingley tariff, is the more noteworthy; but, as will be seen, the export business of the United States has not kept pace with the increase in the general exports, whereas some other countries have greatly increased their pur-

chases of Mexican goods.

France, which in 1896-97 bought of Mexico but \$670,743, bought in 1897-98 \$1,904,587. Holland, which is reaching out for trade here, increased from \$20,730 in 1896-97 to \$257,517. Cuba shows the most notable increase, from \$19,155 in 1896-97 to \$770,611 in 1897-98. This is due to the fact that Cuba had to have certain Mexican products, and that the advantage in favor of Spain was greatly diminished. Germany's increase, though large, was not so remarkable, being \$923,278; while the small Kingdom of Belgium about keeps pace with England, since the former increased \$150,992, whereas the latter, with its position of second only to the United States (though at a great distance), increased only \$177,249.

States (though at a great distance), increased only \$177,249.

In spite of the establishment of factories here, there was an actual increase of \$1,399,397 in imports during the fiscal year 1897-98, and this in spite of the fact that \$2,600,268 worth of American corn was imported in 1896-97, owing to the partial failure of the corn crop in this Republic; whereas in 1897-98, only \$43,069 worth of this cereal was brought into the country. The increase might therefore be estimated on the basis of normal conditions as nearly \$4,000,000. As will be noted, 49 per cent came from the United States, showing a decrease of 4 per cent from the

fiscal year 1896-97.

The reason of this decrease, aside from the diminution in corn shipments to Mexico, is that our exporters are not paying the attention to the commercial customs of this Republic that is given by manufacturers of other nations, principally England, France, and Germany. The business conditions of Mexico are noteworthy, and it will be of much pecuniary benefit to our merchants to study them. The standard of commercial credit is high, and the terms of United States merchants are too rigid. The superiority of many kinds of American goods is readily admitted, and Mexican buyers are desirous of dealing with the United States and would do so more extensively than at present, if trading facilities were offered them.

#### CENTRAL AMERICA.

The commerce of the United States with Central American countries during the last ten years (calendar) is shown in the returns of the Bureau of Statistics of the Treasury Department, as follows:

# BRITISH HONDURAS.

Consul Avery, of Belize, gives the imports in 1897 as \$1,462,097, against \$1,462,637 in 1896. The exports in 1897 are not given; in 1896, they were \$1,571,530. The United States has about 55 per cent of the import trade, the principal items of import from the United States being shoes, \$50,000; butter, \$19,000; bacon and hams, \$20,000; beef and pork, \$62,900; corn, \$13,000; cotton goods, \$63,000; beer and porter, \$10,000; flour, \$92,000; hardware and cutlery, \$19,000; lumber, dressed, \$16,000; rough, \$17,000; machinery, \$18,600; mineral oils, \$18,700; provisions, \$64,490; tobacco, raw, \$12,800. Mr. Avery notes that United States enterprise has been in evidence in the colony in the past year, in the construction of an iron bridge over the Belize River, the building of a new post-office, etc. The future of British Honduras, he says, depends upon the extension of railroads and the development of the mahogany and logwood industries.

United States Treasury figures for trade with British Honduras in 1898 are: Imports into United States, \$117,436; exports from United Digitized by GOOGIC

States, \$555,063.

#### COSTA RICA.

The total value of the imports in 1897, according to Consul Caldwell, of San Jose, was \$4,576,446, of which 33.64 per cent came from the United States. The exports, which were valued at \$5,597,727 in 1896, are not given for 1897. The United States has about 38 per cent, England 23 per cent, Germany 15 per cent, and France 7 per cent of the import trade. Mr. Caldwell gives statements of imports from the competing countries in detail, and his report will be found in the proper place in Commercial Relations.

#### GUATEMALA.

Consul General Beaupre says that the imports were \$6,867,857 in 1897, against \$9,143,354 in 1896. He gives the exports at \$19,775,860,

of which coffee represented \$18,875,700.

The United States has maintained her lead in imports into the country during the past year, and in some important lines the gain has been most gratifying. With Great Britain and Germany, she practically controls the foreign trade of Guatemala. In the past four years the imports have been supplied by these nations in the following proportions:

Year.	United States.	Great Ger- Britain, many.
1894	26 36 84	Per cent. Per cent.  24 13 21 23 23 22 21 21

Cotton goods, cloth, and thread are far the most important imports in point of value, and Great Britain has ever maintained first place, Germany occupying second, and the United States third. In 1894, Great Britain's share of this line was 73 per cent of the whole, Germany's 17 per cent, and the United States 6 per cent. In 1895 the ratio stood: Great Britain, 57 per cent; Germany, 21 per cent, and the United States, 8 per cent. In 1896, Great Britain had 58 per cent, Germany 14 per cent, and the United States 10 per cent. In 1897, Great Britain had 58 per cent, Germany 18 per cent, and the United States 15 per cent—showing a continuous gain for our country. A little more attention to the designs and bright colors required by this market and personal attention by traveling men who speak Spanish, and our rank can be easily raised.

The manufacture of sugar is assuming large proportions, and there will be a good market for the requisite machinery. This can also be

said of machinery for preparing coffee.

Almost everything in the line of groceries comes from the United States. There is a large sale for canned goods—vegetables, meats, and preserves. Condensed milk and evaporated cream are increasing in demand. In general, it may be said that the bulk of United States goods are too good for this market. They should be made to sell cheaply, but should be showy with colors and tiusel.

### HONDURAS.

Imports into Honduras in 1896 were given in the Review of last year as \$:76,716, and exports at \$1,253,151. No figures for the entire trade for 1897 are available. The trade of Great Britain with the country

<sup>1</sup>See Commercial Directory of the Bureau of American Republics, 1897-98, Vol. I.

in 1897 was: Imports from Honduras, \$774,000; exports to Honduras,

Consul Johnston, of Utilla, says that the United States has the majority of the imports into Honduras. In some lines, however—for instance, thread, lace insertion, etc.—the English have all the trade. In cotton goods, some English products are sold, but the imports are mostly from the United States, especially in the finer grades. The heavier qualities are not sold in shirtings, but the cottons used for sails and ticking are all American. The market will use twice as much of a first-class article as of an inferior. In woolen goods, the English have the lead. The demand is for fine, light-weight goods, to be used for trouserings, etc. Cottons of heavy weight take the place of the thicker woolens. The finish and style of all United States products are first class. American whisky is always commended, and our beer is sold, so far as Mr. Johnston has seen, to the exclusion of all other.

The great drawback to imports is the duties. The published rates are so much a pound; but there are additional charges which make the tariff about double.

#### NICARAGUA.

A British Foreign Office report (annual series, 2136) gives the imports in 1897 as \$2,571,580 and the exports as \$2,976,025. The imports show a decrease of \$768,907 as compared with 1896. The trade of Great Britain and the United States is growing; that of Germany and France shows a decrease.

United States Consul Donaldson, of Managua, gives the following statement of trade by countries in 1896:

Countries.	Imports.	Exports.	Countries.	Imports.	Exports.
United States England Germany France Italy Austria Peru Columbia	1, 427, 385 929, 939 477, 611 43, 250 6, 960	\$1, 008, 715 729, 696 2, 286, 145 386, 661 273, 627 19, 176	Guatemala Salvador and Costa Rica. Honduras Spain China Chile Mexico E cuador	12, 183 7, 250 6, 963	\$162, 655 619, 667 137, 097 7, 952

The chief imports from the United States in the year under consideration were: Barbed wire, \$25,000; beer, \$19,000; cotton goods, \$18,600; flour, \$155,000; drugs, \$37,000; sewing machines, \$11,600; kerosene, \$47,000; wine, \$60,000; calico, \$11,700; tallow, \$16,400.

Coffee, says the consul, which is the main article of export, has had

Coffee, says the consul, which is the main article of export, has had a very small crop this year. The export of rubber has also greatly decreased, owing to a law enacted in 1897, forbidding the cutting of rubber for ten years on all lands belonging to the Government.

# SALVADOR.

According to Commercial Belations, 1896–97, the imports in 1896 were \$1,650,444 and the exports \$3,690,276. Of the imports, the United States contributed \$457,189, England \$508,377, Germany \$219,962, and France \$244,821. The exports to the countries named were: United States, \$1,190,581; England, \$323,798; Germany, \$2,136,927; and France, \$1,118,711. No figures for the general trade for 1897 are available. British trade in 1897 according to official returns of Great Britain, was: Imports from Salvador, \$749,000; exports to Salvador, \$1,295,000. The trade of the United States in the same year is stated by Treasury returns as follows: Imports from Salvador, \$1,183,301; exports to Salvador, \$1,116,424.

# WEST INDIES.

According to United States Treasury returns, the trade of the United States with the West Indian islands in the last ten years was:

#### BRITISH WEST INDIES.

Rahamas.—According to figures sent by Consul McLain, the imports in 1897 were \$905,217, and the exports, \$725,522. The total trade, \$1,630,739, exceeded that of 1896, the figures for which were \$1,624,176. Considering that 1896 was an exceptionally good year for trade, says the consul, this showing is encouraging. The trade with the United States was also larger than that of 1896, when it was above the average. The total trade with the United States in 1897 was \$1,191,489, which,

as will be seen, represented a large proportion of the trade with all The increase of United States trade in the last four years is shown by the following figures: 1894, \$1,014,757; 1895, \$1,121,655; 1896, \$1,180,682; 1897, \$1,191,489. Among imports from the United States were: Preserved fruit and meat, \$31,000; earthenware, glassware, and furniture, \$94,000; hardware and tinware, \$12,500; meat, salted and fresh, \$38,000; butter, \$22,000; corn meal and hominy, \$28,000; flour, \$124,000; machinery, \$13,000; textiles, \$95,000; oil, \$10,000. Among the general exports of the Bahamas, coffee figured for \$16,700, pineapples at \$119,600, hemp at \$22,000, turtle shells at \$26,900, sponges at \$438,500, oranges at \$16,700, grape fruit at \$16,000, and preserved fruit at \$19,600.

Barbados.—Consul MacAllister says the imports in 1897 were \$5,043,-495, against \$5,244,435 in 1896. In like manner, the imports from the United States show a decrease of \$175,880. Food stuffs came from the United States to the value of \$1,253,895 in 1897, against \$483,755 from Great Britain. On the other hand, Great Britain sent manufactured goods to the value of \$658,785, while only \$116,600 in this line was imported from the United States. Our canned goods, the consul thinks, are not as widely known as they should be. There is a good opening for the construction of an electric railroad, to run around the island, a

distance of about 60 miles.

The exports, says Mr. MacAllister, exceeded those of 1896 by \$90,674. The figures for 1896 were \$3,590,140, which would make the exports in 1897 some \$3,680,000. The output of sugar was fair. The total quantity exported was 67,609 hogsheads. Manyak was shipped to the value of

\$18,800, of which \$12,967 went to the United States.

Bermuda. 1—Consul Greene gives the imports in 1897 as \$1,572,927, against \$1,482,826 in 1896. The exports were \$621,486, against \$528,465 in the previous year. The trade with the United States for the two years is stated as follows: Imports in 1897, \$949,266; in 1896, \$897,328. Exports in 1897, \$587,868; in 1896, \$481,330. The increases in imports were mainly in spirits and malt liquors, fancy goods and groceries, rice, hay, horses, potatoes, and silk goods. Decreases in the imports of clothing and leather manufactures were noticeable.

The trade of the United States with Bermuda in 1898 is given in the Treasury returns as follows: Imports from Bermuda, \$449,218; exports

to Bermuda, \$979,288.

Jamaica.—British colonial returns give the imports in 1898 (fiscal year ended March 31) as \$8,078,390, and the exports as \$7,046,692. Of the imports, Great Britain sent \$3,776,404 and the United States The exports to Great Britain were valued at \$1,547,547, and to the United States at \$4,389,583. Both imports and exports showed a decrease as compared with the previous year, although exports to the United States increased. Among the chief items of import and export were: Imports, shoes, \$214,626; coal, \$272,524; corn, \$145,995; cottons, \$1,012,232; flour, \$788,373; hardware, \$136,262; lumber, \$180,-061; rice, \$194,660; soap, \$92,464. Exports, coffee, \$802,973; bananas, \$2,165,593; oranges, \$652,111; sugar, \$583,980; logwood, \$574,247.

Leeward Islands.—According to figures sent by Consul Hunt, of Antigua, the imports in 1897 were \$528,902, against \$573,345 in 1896. The United Kingdom sent \$205,132 worth of imports, and \$220,186 came from the United States. The total exports were \$562,569 in 1897, against \$629,332 in 1896. Of the exports in 1897, \$491,599 went to the United States. The financial stringency which the colony has been

suffering accounts for the decline in trade. Prospects for the coming year are brighter, on account of help being furnished by Great Britain, and further relief is promised by the establishment of a Government sugar factory. The extent of the commercial depression is shown in the decrease of imports of certain articles. Pork, for instance, fell off \$12,000; beef, \$12,000; butter, lard, dried fish, and groceries in general show a decline. On the other hand, the imports of bread and biscuits, corn meal, rice, hams and bacon, and kerosene increased. Mr. Hunt thinks that the prospects for increased trade with the United States are good. There are already signs of a diversion of imports from Great Britain. One large general store, established during the past year, is purchasing 70 per cent of its supplies in the New York markets. United States butter, meats, groceries, etc., are growing in favor.

Trinidad.—Consul Smith sends figures showing that the imports in 1897 were \$10,517,480, and the exports \$9,708,181. The imports for 1896

were valued at \$10,489,200.

The trade with the principal countries in 1897 was:

Countries.	Imports.	Exports.	Countries.	Imports.	Exports.
United Kingdom British Colonies France Germany Hol and	981, 573 292, 477 159, 621	\$3, 472, 248 200, 986 1, 066, 250 334, 768 168, 381	Spain Portugal United States Venezuela	128, 476 52, 072 2, 192, 845 2, 251, 243	21, 899 6, 813 3, 057, 135 1, 239, 478

Tucks Island.—British colonial returns give the imports in 1897 as \$160,595, and the exports as \$209,260. The figures for 1896 were: Imports, \$151,000; exports, \$150,000. In Commercial Relations, 1896-97, Vice-Consul Jones stated that the United States sent \$110,000 of the imports, and took \$11,000 of the exports.

#### CUBA.

The trade of the principal countries with Cuba and Porto Rico for 1896 and 1897 was:

Countries.	Imp	orts.	Exports.		
	1896.	1897.	1896.	1897.	
United States (fiscal year)	\$42, 314, 600 174, 000	\$20, 587, 000 208, 000	\$9, 632, 574 5, 087, 000	\$10, 248, 000 5, 843, 000

a Not available.

The total imports into Cuba in 1896 were valued at \$66,166,000, and the exports at \$94,395,000. In 1893, the trade of Cuba with the United States alone showed the following figures: Imports, \$78,706,000; exports, \$24,157,000. The trade had fallen off during the fiscal year ended June 30, 1897, to imports, \$18,406,000; exports, \$8,259,000. In the calendar year 1898, the trade was: Imports from Cuba into the United States, \$18,315,193; exports to Cuba from the United States, \$10,750,257. The present industrial and commercial conditions of Cuba are described in a report by Special Commissioner Robert P. Porter, made in November, 1898, from which the following extracts are taken:

#### MANUFACTURING AND SANITARY CONDITIONS.

Manufacturing in Cuba is limited to a few industries in Havana, to the manufacture of sugar and tobacco, and to machine shops and small foundries scattered over the

island for the convenience of the railway companies, sugar centrals, and harbors. There is little hope for industrial enterprise, in the broader sense, until the sanitary conditions have been improved in all industrial centers of the island.

#### LABOR.

That the wounds of Cuba will soon heal with the rapid promotion of work is undoubtedly true. There is at this moment a steady increase in the demand for labor on plantations, and, in Santiago province, labor for the nunes. It is estimated that at least 3,000 additional laborers could be employed in the Santiago mines before the end of the year, if it were possible to send them from the spots where starvation stares them in the face, to the localities where work can be obtained for those able to withstand the hardest toil under trying climatic conditions.

Many Spanish soldiers desire to remain in the island. They have formed alliances in Cuba—some of them have married and have families there. These men desire employment of some kind, either as civil guards, in the mines, or on the plantations. As a rule, they make industrious and faithful laborers. Attention is called to an

extract from a letter written by a prominent business man of Havana:

"I advertised for laborers in the Santiago mines in our principal newspapers, and, in consequence, have had for the last three days at least 120 men calling at my office for situations. They are willing to accept the price offered, but not one of them can

pay the passage from this port to Santiago.

'Lots of soldiers, lots of laborers, many of whom have already worked in the Santiago mines and know all about the work, living, and everything else, but were taken away from there as guerrillas, volunteers, and soldiers of some kind, are willing to go, but, as you will understand, the people here have been without work and

the soldiers without any pay, and therefore nobody can pay the passage.

"While writing these lines several men have called on me, but it is the same thing over and over again; they need work and are willing to work, but they have not got

one cent to save their souls."

It is believed this indicates clearly, and without exaggeration, the present conditions in Havana as regards would-be laborers and their sufferings for want of work. During fifteen years' experience in operating iron mines in Cuba, those who know say the labor question there has always been the unsolved problem, as never during that time have they been able to fully supply their wants in this direction. If the number of laborers has not in normal times been sufficient to satisfy the requirements of all industries in Cuba, how much will it fall short under the existing conditions? The only hope for the renewal of presperity in Cuba is, first, the rehabilitation of the sugar industry; secondly, a revival of work on tobacco plantations; and, thirdly, a full complement of men in the mining districts. These industries are the basis of the prosperity of the island. It is useless to try to create new industries are the basis of the prosperity of the island. tries until the old and strong industries of the Island of Cuba are on their feet again. If it is difficult to secure the necessary labor, after the Spanish soldiers leave, for the plantations, producing, as they will this year, a maximum of 400,000 tons of sugar for export, where are the laborers coming from to produce the highwater mark of 1,100,000 tons of sugar? The process of industrial reconstruction will necessarily be slow, and will depend in a large degree upon the stability of the government and the rapidity with which the people settle down to work. There is no ernment and the rapidity with which the people settle down to work. There is no possibility, however, of a surplus labor supply. Work can be found for all capable and willing to perform hard labor, in repairing the dismantled sugar plantations, etc.

#### RAILWAYS.

The railway system of Cuba, consisting of seven companies, the aggregate length of whose lines is only 917 miles, is entirely inadequate in bringing the extreme ends of the island together, Santiago and Havana in point of time being as far apart as San Francisco and New York, though only separated by a distance of a few hundred miles. The facts gathered on this subject point to the advisability of immediately constructing a trunk railway from ond to end of the island, with branches extending the subject point to the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sales of the sal ing north and south to the important cities and ports. No one enterprise could do so much to improve the situation upon the island. No revolution could have existed in Cuba if such a railroad had been completed by the former government; and nothing will so rapidly tend to the revival of commercial and general business as the facility for quick passage from one end of the island to the other, and from the trunk line over branches to the sea-board cities. All political turbulence will be quieted thereby and prevented in the future. The entire country will be open to commerce; lands now of practically no value and unproductive will be worked; the scaport towns will become active; and commerce between the island and the United States will soon be restored to the former figures of approximately \$100,000,000 per annum. Business enterprise, over alert to conditions such as herein described, has already surveyed the route, and there are several projects on foot looking toward prompt action in this direction. After a careful study of the situation, it would seem

extremely doubtful if such an enterprise could be made a commercial success for many years to come, without material assistance from those responsible for the industrial future of Cuba.

#### PUBLIC SCHOOLS.

There are free public schools in Cuba, but the teachers have the right to take pay scholars, and naturally those who do not pay get little or no attention. In the cities from which data are available, it was found that only a small portion of the school population attend school. There were 888 schools for boys and girls in 1893, and the amount paid for their support was \$775,646. It is impossible to even approximate the situation at the present moment. In a general way, it may be described as simply deplorable. A free public-school system must be immediately established, for much of the misfortune and suffering which Cuba has undergone may be traceable to the neglect of education. The proportion of people who are illiterate is very great. Some statistics show only one in forty of the laboring classes able to read and write. There can be no stable government in Cuba until this has been remedied.

#### TARIFF AND CURRENCY.

The new tariff of Cuba, issued by the War Department, which took effect January 1, 1899, shows reductions in almost every item. Agricultural machinery and apparatus for making sugar and brandy are now taxed 10 per cent ad valorem; weighing machines, steam motors, steam pumps, hydraulic, petroleum, gas, and air motors, boilers, locomotives, and traction engines, velocipedes, sewing machines, and various other machines are taxed 20 per cent ad valorem; the duties on food products are notably reduced.

According to an Executive order, the Spanish centen or alphonsino (25 peseta piece) is to be valued at \$4.82, and the peso at 60 cents.

#### DANISH WEST INDIES.

Consul Van Horne, of St. Thomas, gives the imports at the three ports of entry, St. Thomas, Christiansted, and Fredericksted, during the year 1897, as \$1,142,038. Exports from St. Thomas in 1897 are not stated; in 1896, they were \$45,000; exports from Christiansted in 1897 were \$253,000, and from Fredericksted, \$276,720. The United States, says Mr. Van Horne, leads in the aggregate imports, although in dry goods and hardware, European nations surpass us. With proper effort, the United States could lead in these lines also. Cottons were imported to the value of \$80,000, mostly from Great Britain. Sugar, rum, molasses, bay rum, and turtle shell figure among the exports.

As above stated, the trade of the United States with the Danish West

Indies in 1898, was: Imports, \$388,767; exports, \$644,739.

#### DUTCH WEST INDIES.

Imports in 1896, according to the Statesman's Year Book, were \$2,144,742, and exports, \$1,765,475. Later figures as to trade, unfortunately, are not available. Most of the food supplies, says Consul Smith, of Curação, come from the United States, as well as carriages, bicycles, the cheaper class of furniture, sheetings, canvas, and prints. Fine goods come mostly from Europe. The colony is suffering commercial depression; the crops for this season were bad, and had it not been for the American windmills, would have been much worse. United States exports to the Dutch West Indies in 1898, were valued at \$499,105, and imports therefrom at \$179,357.

#### FRENCH WEST INDIES.

Guadeloupe.—Consul Ayme gives the imports in 1897 at \$3,284,997 and the exports at \$2,471,172. It will be noted, he says, that the imports exceed the exports by the very considerable supports of \$800,000.

The great bulk of the exports go to France or its colonies, the foreign export trade, including that with the neighboring English islands, amounting to the insignificant amount of \$6,496. On the other hand, the greater part of the imports comes from other countries than France. Flour and alimentary grains, kerosene, animal products, live animals, and wood, amounting to over \$1,000,000, come chiefly from the United States, while France sends wine, fish, textiles, etc.

The imports in 1896 were stated at \$1,200,000 and the exports at

· **\$3,600,000.** 

Martinique.—Consul Dart, of St. Pierre, gives the imports as \$9,785,257 and the exports at \$5,863,702 in the year 1897. Commerce with the United States is confined almost entirely to food stuffs, which have the benefit of a special tariff on account of the geographical situation of the colony. Formerly, certain classes of dry goods came from the United States, but they were not adapted to local tastes; the tariff duties upon them also are very high. Agricultural implements, before the new duties took effect, were imported in considerable quantities from the United States; but this line has greatly decreased, and is now supplied by France and Belgium, this country enjoying the rates of the minimum tariff of France. Carriage accessories, in spite of the enormous duty, still come from the United States.

#### HAITI.

Imports in the fiscal year 1897, according to Vice Consul General Terres, were \$5,475,138, of which the United States furnished \$3,489,988, France \$942,683, Germany \$529,259, and England \$309,230. Imports from France during the past year have been less than for any period since 1890. Those from Germany and England, on the other hand, have made noticeable gains. The Germans are supplanting the United States in hardware, but our provisions hold their own, and butter is one of the recently imported articles which has been received with favor. There is no general statement as to exports. In 1896, they were valued at \$2,359,000 and the imports at \$3,900,400. Of coffee, 75,000,000 pounds were exported in 1897, of which 9,300,000 went to the United States, representing a value of \$1,005,000.

Consul Livingston, of Cape Haytien, says that American denims have almost exclusive control of the market. American axes are also

preferred.

The American minister to Haiti, Mr. Powell, says that American capital is about to seek an entrance into Haiti to develop its resources.\* A company is being formed, under a charter of the State of New Jersey, to construct artesian wells and supply water in various localities. Another company proposes to utilize the native cabinet woods, which are susceptible of very high polish, in exportation to the United States and in the manufacture of furniture. It will operate under a charter granted by the State of New York. Another syndicate is being organized to build a railroad to open up the northern part of the Republic. The Government is aiding these enterprises with all means in its power.

#### PORTO RICO.

According to figures published by the Bureau of Statistics of the Treasury Department, already quoted, the commerce of the United States with Porto Rico in the last three calendar years was:

	Imports from   Porto Rico.	Exports to Porto Rico.
1896 1897 1898	. 1, 943, 251	\$1, 955, 814 2, 023, 751 1, 404, 004

The figures of the trade of the principal European countries for the years 1896 and 1897 are included in those for Cuba. The total imports in 1896 were estimated, in a recent bulletin of the Bureau of Foreign Markets of the Department of Agriculture, at \$18,282,000 and the exports at \$18,341,000. The commerce of Porto Rico has increased \$15,000,000 in the last decade. During the three years from 1893 to 1896, Spain had 28.8 per cent of the total trade, the United States 19.94 per cent, Cuba 13.41 per cent, and the United Kingdom 8.34 per cent. Trade with the United States was valued at \$7,300,000 in 1887. Coffee is the chief item of export, amounting in value in 1896 to \$13,300,000. Sugar exports, on the other hand, have declined in value.

By an Executive order of January 20, 1899, the peso is to be valued at 60 cents, as in Cuba. The new tariff for Porto Rico, recently issued by the War Department, imposes even lower rates of duties than those

in force for Cuba.

Consul Hanna, of San Juan, writes under date of October 25, 1898:

I am receiving hundreds of letters from all classes of people in the United States asking about Porto Rico. Most of these persons say they intend coming to Porto Rico for work or to go into business, and they want to know all about the country. I have said to nearly all these inquirers that no American seeking work should come to Porto Rico. I have also said to business men in the United States that in my opinion they would be disappointed if they came here now to establish themselves; that the time had not yet arrived for an American to go into business in Porto Rico. I believe the time will come when this will be a good field for the investment of American capital, and when nearly all kinds of business conducted in an American style will be profitable; but that time will not come until the island has American government and until the laws of the United States are enforced. Most of our business men who have come here simply look the island over, pronounce it rich and possessing golden prospects for the future, but decide that it is too early to invest.

# SANTO DOMINGO (DOMINICAN REPUBLIC).

Consul General Maxwell says that the imports for the fiscal year 1897-98 were \$1,797,279, of which \$1,183,051 came from the United States. Exports in the first six months of 1898 were \$456,542. Sugar, tobacco, cacao, and coffee were the chief articles exported. Although the trade of the United States is large, Mr. Maxwell thinks that with effort it could be improved in certain lines. Drills and cotton goods, for instance, come mainly from England, the prices being cheaper than those asked for the American article. Wardrobes, chairs, and settees are the principal articles of household furniture used in Santo Domingo, and the United States should supply them. The consul-general continues:

A very large majority of the provisions now come from the United States, and with Porto Rico in our possession and our wholesale merchants established there, it would seem an easy matter for them to control this branch of trade. The distance between the nearest points of Santo Domingo and Porto Pico is only about 60 miles, while the distance from New York to Santo Domingo is about 1,260 miles. The same reasoning might apply to other branches of trade, especially the general dry goods and hardware trade, as the habits and customs, wants and likes, of the Porto Ricans and Dominicans are very similar.

The Moniteur Officiel du Commerce, Paris, March 17, 1898, valued the exports from Santo Domingo in 1896 at \$1,395,786, distributed as follows: United States, 87 per cent; France, 7 per cent; Curação and Venezuela, 2.5 per cent. The same publication estimates that 20 per cent of the imports come from Germany and 19 per cent from France.

# SOUTH AMERICA.

The commerce of the United States with South American countries during the last ten calendar years is given as follows in United States Treasury returns:

#### IMPORTS.

Countries.	1889.	1890.	1891.	1892.	1893.

#### ARGENTINE REPUBLIC.

In a comprehensive report from Buenos Ayres, Consul Mayer gives the following statement of trade in 1897:

Countries.	Imports.	Exports.	Countries.	Imports.	Exports.
Germany West Indies Belgium Bolivia Chile United States Spain Italy	50, 260 248, 902 10, 101, 714 3, 245, 646	\$14, 047, 135 206, 817 8, 934, 829 352, 520 1, 977, 398 8, 321, 611 1, 271, 149 2, 964, 616	Paraguay Portugal United Kingdom. Uruguay Various poits Shipments for order. Saudry imports	\$1, 457, 327 71, 588 36, 392, 057 505, 170 199, 196 4, 261, 505	\$158,084 19,562 12,984,690 2,586,203 7,369,905 7,165,911
France Holland	11, 019, 576 80, 055	2, 299, 019 33, 653	Total	98, 288, 948	101, 160, 299

The total imports in 1896 were \$12,058,002 and the exports, \$115,670,964.

The imports for the first six months of 1898 were \$49,553,375, and the exports, \$81,632,825. Wheat exports have increased largely in 1898, demonstrating that the commission appointed by the Government for the purpose of exterminating the locusts was successful to a considerable extent. Imports from the United States in the first half of 1898 were \$4,895,746.

United States manufacturers, says the consul, have not yet realized the value of the Argentine Republic as a market. With branch houses, they could secure a large share of the trade. Consul Ayers, of Rosario, gives advice in regard to packing, etc. Trade with the United States is growing, he says, steadily, if slowly.

BOLIVIA.

Bolivia having no seaport, imports and exports pass through Chile and Peru. The imports in 1894 (no more recent figures being available) were estimated at \$3,000,000 and the exports at \$9,600,000. The imports from the United States (according to the Treasury figures of exports to Bolivia) were \$5,000 in 1897 and \$21,900 in 1896. Imports from Germany for the same year are stated in German official returns at \$390,000, and in 1896 at \$500,000. There have been no exports to the United States since 1893, when they were valued at \$5,400. Exports

Digitized by Google

to Germany in 1897 amounted to \$690,000 and in 1896 to \$250,000. British and French statistics make no mention of trade with Bolivia. Silver is the most valuable article of export.

#### BRAZIL.

No figures as to the general trade of Brazil being available, the following table, showing the commerce with the principal countries in 1897, has been compiled from the official returns of the several countries:

Countries.	Imports from Brazil.	Exports to Brazil.
Great Britain Germany France United States	23, 880, 000 18, 140, 000	\$27, 600, 000 12, 500, 000 11, 600, 000 12, 400, 000

In 1895, the total imports were estimated at \$145,900,000 and the exports at \$171,200,000. (See Commercial Directory of the Bureau of American Republics, 1898, Vol. I.)

Imports, says Consul-General Seeger, of Rio de Janeiro, have decreased in quantity during the last year. This fact is chiefly due to the severe financial crisis through which Brazil is now passing. The serious depreciation in the value of coffee, caused by overproduction, has enforced economy in all branches of trade.

Consul Kenneday, of Para, says:

Commerce at Para has developed enormously within the past few years; the customhouse is overwhelmed with work, and there are not at present enough stores to receive the goods as they arrive, although large additions have recently been made. Both lines of steamships running between Para and New York are increasing the number of their ships, as they are entirely unable to carry the heavy freight billed for this section of the country. A short time ago, the two lines made one trip each a month; later a bimonthly service was established; now three trips are made, and I am reliable in the service was established; now three trips are made, and I am reliable in the service was established; now three trips are made, and I am reliable in the service was established; now three trips are made, and I am reliable in the service was established; now three trips are made, and I am reliable in the service was established; now three trips are made, and I am reliable in the service was established; now three trips are made, and I am reliable in the service was established; now three trips are made, and I am reliable in the service was established; now three trips are made, and I am reliable in the service was established; now three trips are made, and I am reliable in the service was established; now three trips are made, and I am reliable in the service was established; now three trips are made, and I am reliable in the service was established. bly informed that on the 1st of January weekly trips will be made. No better evidence could be brought to show the greatly increased demand for United States goods. I learn from the captain of every vessel coming from New York that it is utterly impossible for any one of the steamers leaving that port to clear the freight billed for Para and the Amazon. This statement is gratifying in the extreme, though it is to be regretted that these goods can not be hauled in American ships.

I am convinced that builders' materials could easily be marketed here; also agricultural implements, such as hoes, shovels, hayforks, spades, hatchets, and axes. Yale locks, hinges, fastenings, and all kinds of cartridges find a ready sale. A general line of household utensils, in my judgment, would quickly get a foothold here. We furnish all the flour to this community, and I am proud to say there is no room for improvement in this particular article. We also supply the bulk of the hams,

bacon, lard, and other articles belonging to this class.

United States boots and shoes are recently securing quite a foothold. German-American agents have just received upward of 9,000 pairs, and one advises me that the attractive finish and superior workmanship enabled him to dispose of all of his consignment, which he had made especially for this market by a Boston house. This same gentleman has gone to Boston to lay in a much larger line of shoes. He intends to open an American shoe house, confining himself entirely to these goods.

There is a broad field for expansion in machinery. This line of industry has made rapid strides in the right direction during the past six months, and would increase much more, if our manufacturers would take advantage of this opening.

Consul Clark, of Pernambuco, says:

If properly handled United States goods will constitute a large share of the imports into Brazil. There are many openings for textiles, hardware, nails, etc. My attention has been called to the necessity of making hinges of a style desired and used in this country. Agricultural machinery should be brought here and introduced by competent people. Our bicycles are being introduced, and all prefer them, though the roads are in such bad condition that there can be no extensive use in this district. Digitized by Google

This is an opportune time for the introduction of United States textiles, dealers preferring them to all others, even on thirty days' credit, as against four mouths' from Europe. A concession in this direction would work well. There is a good opportunity for the introduction of our files and saws, which come here now through English houses.

The opening for American coal was never better, but it should be screened. Spruce and hard-pine lumber, suitable for packing cases and boxes, is in great

demand.

#### CHILE.

According to figures transmitted by Consul Caples, of Valparaiso, the imports in 1897 were \$50,437,160, and the exports \$49,860,682. There was a decrease of some \$6,600,000 in the imports, as compared with 1896, and of over \$7,000,000 in the exports. Mr. Caples gives a general description of the country and its products, in order to inform those exporters who have no clear idea of conditions there. Numerous cases, he says, have occurred in which United States merchants have sent, at a heavy loss, consignments of honey, fresh butter, peaches, apples, canned vegetables, cheese, and beans. All these foods can be produced as well in Chile as in the United States. The same is true of all cereals except oats. American cotton flannels are preferred, and our twills, sheeting, and calicoes would be popular but for the price. Freights from England and Germany are a trifle less than from the American machinery is gradually gaining, and in hardware the United States has almost the monopoly of the trade. There is a good opening, the consul thinks, for the iron trade. Galvanized iron is used largely in the construction of building, for roofing, fencing, etc.

The trade with the principal countries in 1896 was:

Countries.	Imports from Chile.	Exports to Chile.
Great Britain	\$;ty, 600, 000 7, 700, 000 2, 000, 000 1, 600, 000	\$23, 290, 000 15, 460, 000 2, 180, 000 5, 240, 000

# COLOMBIA.

The Commercial Directory of the Bureau of American Republics, Vol. I, 1897-98, gives the value of the imports into Colombia in 1895 as \$11,500,000, and the exports as \$15,000,000. No later figures being available, the following statement has been compiled from the official returns, for 1897, of the countries named:

Countries.	Imports from Colombia.	Exports to Colombia.
Great Britain. Germany United States.	1, 870, 000	\$5, 900, 000 2, 000, 000 3, 890, 000

Consul General McNally, of Bogota, after referring to the commercial depression in Colombia during the past year, on account of the change of administration and the small coffee crop, says:

Careful inquiry points to the encouraging fact that United States manufactures have perhaps suffered less than those of other countries in this market. This is attributed to the acknowledged merit of the American products which have gained a foothold here. In the matter of boots and shoes, a line in which the excellence of our products is admitted, a wider market should be had, and probably could be had, by giving more heed to Colombian taste in this regard. Certain styles are pre-

ferred, and others, though more acceptable in the United States, are not so readily received. It is admitted that American cotton fabrics stand at the head, but as an offset, dealers say that fabrics of less merit but of lower price sell better. There should be a good opening here for the cheap and modern grades of American furniture, since the domestic article, although substantial, is produced by rather primitive methods, and, as a rule, a variety of styles is lacking. Material for furniture is brought from a distance, carrying being done on the backs of natives or mules. The finishing is almost always done by hand, machinery being very little used. I believe that simple and labor-saving machinery would find a ready market here. American silver-plated ware is admitted to be the best that comes to this market, but there are European products in this line that sell at lower prices.

As a rule, United States machinery is preferred, when our manufacturers can be induced to bear in mind the hard transportation conditions, and consent to construct their machinery accordingly. This relates especially to machinery for coffee or sugar plantations. American ranges (steel), with economy of detail and manufactured

with a view to close and safe packing, have found ready sale.

A United States corporation, known as the Colombian Traction and Express Company, has brought into this country a traction engine and train of cars, with a view to operating this system between Bogota and the Magdalena River.

#### ECUADOR.

Vice-Consul-General Reinberg, of Guayaquil, gives the imports in 1897 as \$6,972,394, of which \$2,300,000 came from England. Germany, France, and the United States each contributed over \$1,000,000. Textiles represented \$2,145,000 of the imports; hardware, \$651,000; food products, \$730,000. The total exports were \$4,034,059, of which \$1,184,000 went to France, \$922,000 to Germany, \$733,000 to the United States, \$485,000 to England, and \$340,000 to Spain. Cocoa was exported to the value of \$2,676,000. Rubber, coffee, and ivory nuts were among the other principal articles of export. Mr. Reinberg says that the United States figures only in a passive sense in the foreign commerce of Ecuador. In lines in which United States products are beyond competition, the Ecuadorian consumer has sought our market. Kerosene, lard, lumber, flour, etc., are imported in large quantities. Several million dollars' worth of trade is annually lost to the United States, because our merchants will not emulate European methods of trying to gain foreign markets. The writer gives a table of 17 important articles of import, the total value amounting to nearly \$2,000,000, in which the United States figures for only \$16,000.

Consul General De Leon, of Guayaquil, writes in regard to the railway to be constructed by United States enterprise. The road is to run from Duran, opposite Guayaquil, to Quito, some 350 miles. Work will

be begun in April or May. He continues:

At present, the Ecuador accessible to commerce is a low tropical coast, consisting of 19,725 square miles area, sparsely populated (242,000 inhabitants, Wolf's estimate), exporting principally cacao, rubber, hides, sugar, ivory, nuts, and other tropical productions, but obliged to import almost every manufactured article and temperate-zone commodity needed for consumption. Meanwhile the isolated part of Ecuador, which will be opened up by the projected railway, is an elevated plateau, of temperate and healthful climate, with an area of 20,680 square miles, comparatively populous and inhabited by an industrious people. This section has practically unlimited water power for manufacturing purposes; cotton grows wild on bushes, and the ranges for grazing purposes—production of wool and finest class of meats—are unrivaled. Cereals, garden truck, and fruits of all kinds spring up as if by magic from the grateful soil (volcanic ash), with a minimum of labor. Yet this region, on account of its poor transportation facilities, at present does virtually no export trade. There is, of course, some importation, but the proportion of those who are rich enough to use foreign articles, is very small, and will continue to be so until, with the advent of the railway, wages and standards of living are raised.

\* \* The construction of the road will inaugurate, it is believed, a new era in Ecuador. \* \* As the enterprise is essentially American, there will be an influx of Americans and closer relations will be established with the United States, which

See Advance Sheets No. 314, January 3; Consular Reports No. 221, February, 1899.

should, and doubtless will, enjoy the lion's share of the commerce of the west coast of Ceutral and South America as soon as we build an isthmian canal.

Minister Sampson writes from Quito that the company has also received a concession to establish a bank in Guayaquil, with a capital of \$1,000,000 gold. It is to be in operation by March, 1899.

# FALKLAND ISLANDS.

Consul Rowen, of Port Stanley, gives the imports into that port in 1897 as \$328,431, chiefly in flour, corn, and lumber. Great Britain sent \$264,000 worth of the imports. The exports were \$604,503, of which \$598,000 went to Great Britain. Wool is the principal article of export. Sheepskins and seal skins are also shipped. The trade of the islands, says the consul, is on the increase, and the United States should have a part of it. American trade, so far as he can estimate, amounts to from \$10,000 to \$12,000 per annum, but it is all done through England. Terra del Fuego is being largely settled from the Falkland Islands, and the trade of that country promises to develop in a way that will make it worth while to try to gain it.

# THE GUIANAS.

British Guiana.—Consul Moulton, of Demerara, says that the imports in 1897-98 were \$6,158,283, against \$6,440,207 for 1896-97. The United Kingdom sent to the value of \$3,556,214 in 1897-98, and the United States, \$1,640,346. It is noticeable that although the imports from almost every other country have decreased—those from Great Britain to the value of over \$200,000—imports from the United States increased during the year from \$1,438,805 in 1896-97 to \$1,640,346. The exports in 1897-98 were \$8,101,579, against \$8,604,712 in the preceding fiscal year. Nearly all countries seem to have shared in the decrease of exports. To the United Kingdom, goods were sent to the value of \$4,809,930 in the fiscal year under consideration, and to the United States, \$3,371,381. The principal articles imported are breadstuffs, pickled beef and pork, lard, butter, cheese, fish, and preserved meats and fruits, animals, corn meal, hay, oats, tobacco, petroleum, lumber, paper, staves, soap, hardware, a little cutlery, a few carriages and bicycles. The consul thinks there is an opening for rattan furniture, office furniture, men's furnishings, hats, and cotton goods. Each year shows an improvement in the rice industry.

Dutch Guiana.—Consular Agent Deyo, of Paramaribo, reports that imports from the United States consist mostly of foodstuffs. Prices ruled higher than usual during the early period of the war with Spain, but these conditions were of brief duration. Manufactured goods come mostly from England and Germany, as these countries keep in close touch with the market. Something may be done in the way of machinery for gold mining and the preparation of coffee for the market. Once a year, the Government invites bids for the supply of coal—2,500 to 3,000 tons per annum. The English have heretofore secured the contract. The kind used is Cardiff double screened. Exports consist of cocoa, sugar, balata gum, coffee, timber, rum, and gold. The cocoa and sugar go chiefly to the United States. Coffee is sent to Holland, and the industry is increasing. A loan of \$1,200,000 has been obtained for drainage and general improvements in the colony.

No figures as to trade are supplied. In 1896, the imports were valued at \$2,134,070, of which the United States furnished \$439,000. The value of the principal articles exported in 1896 were, balata, \$167,000; cocoa, \$620,000; sugar, \$382,000.

French Guiana.—According to French official returns, the commerce of France with French Guiana in 1896 was: Imports into French Guiana, \$1,790,000; exports from French Guiana. \$410,000. The value of the trade with other countries was divided as follows: Imports, \$50,0.0; exports, \$43,000. The principal articles imported from France were, wines, \$328,000; cottons, \$115,000; leather manufactures, \$154,000; clothing, \$15,000.

Consular Agent Lelanne, of Cayenne, states that United States food products are the only ones which can be transported to the gold diggings in the interior without spoiling. In spite of the preferential tariff for French products, the United States has a large trade in flour, salt beef, pork, lard and its compounds, oleo, butter, corn, hay, oats, lumber, petroleum, and sewing machines. Placer gold mining is the only

industry in the colony, and gold is the chief export.

### PARAGUAY.

Consul Ruffin, of Asuncion, estimates the imports in 1897 as \$2,211,465, against \$2,780,000 in 1896; the exports at 14,467,771 pesos (paper), against 12,292,000 pesos in 1896. The principal articles of export are hay, cotton, huts, pineapples, rice, bananas, coffee, bark, hides, woods, fruit, etc. Mr. Ruffin notes the establishment of a commercial organization to give information, collect statistics, settle debts, report prices current, etc.

A correspondent of the British Trade Journal, London, October 1,

1898. savs:

English manufacturers are apt to overlook Paraguay, owing to the fact that the apparent amount of its foreign trade is small. This is, in a great measure, the result of the inland position of the country and the import and export trade being done mainly through Argentina or Uruguay, figuring as the commerce of those countries, which appears so much larger at the expense of Paraguay. I would call attention to the following lines of trade:

Sewing machines are in great demand throughout Paraguay, as, indeed, they are in every part of South America I have visited. The cheapest kinds are the most salable, though a considerable number of high-class machines could also be placed. Most of those in the market are of German manufacture.

Stills.—There are a large number of stills in use, the greater part of those imported being of French make. Small sizes are most in demand, capable of distilling from 50 to 200 gallous per day, of a strength of 18° (Cartier). They may be either simple or for continuous (or semicontinuous) distillation, but should be as little complicated as possible. By advertising and pushing their sale, a considerable quantity might be disp sed of. There is little wine made in the country or any other liquor than "cana" (white rum).

Chemicals.—For such chemicals as are generally sold by druggists, there is a good demand. In this line, English manufacturers seem to secure a fair share, though few local dealers order direct, generally placing their orders in Montevideo or Bucnos Ayres. The same remarks apply to surgical instruments and appliances. Muneral

waters are in fair demand in Asuncion and the larger towns.

Sujar-making machinery.—A considerable number of portable iron mills, suitable for working with oxen, might be placed. A good deal of sugar (unrefined) is made in Paraguay, but nearly all on a small scale. The quantity produced is, however, insufficient to meet the demand, and a good deal is imported from Argentina, where there are some very large sugar works in the Chaco, just across the river from Paraguay. There is no demand for large plants in Paraguay; indeed, I only know of one large sugar factory in the whole country, and I am told it is not prosperous. In Paraguay, it should be noted, like many new and thinly populated countries, small industries pay well, while the success of large ones is more problematical.

Textile fabrics.-For textile fabrics, especially cheap cotton goods, there is a large demand. Cheap cottons are sold by retailers at little or no profit, to push the sale of other wares. In this line, English firms still hold their own, though competition is "Ponchos," such as are made in England for the South American market, are

<sup>&</sup>lt;sup>1</sup>In a previous report (see "Notes from Paraguay," Consular Reports No. 215, August, 1898, Mr. Ruffin estimated the value of the exports in 1897 at \$1,955,000 gold.

also sold largely. They are practically the same as those sold in Argentina, though the heavier woolen sorts are not in so much demand, as the winter here is somewhat warmer.

Foreign competition is keen in Paraguay, German, French, and Italian houses being comparatively numerous. Those English firms who have any dealings with Paraguay seem to be content to work the country through an agency in Buenos Ayres, yet there is an opening in Asuncion and other towns for enterprising firms, who make a specialty of the products of the country.

#### PERU.

The Moniteur Officiel du Commerce, Paris, April 7, 1898, gives the exports in 1896 as \$12,533,042, and the imports as \$8,612,533. The statement of the value of imports on the consular invoices, says the article, do not agree with those published by the Government. A table giving the imports through the custom-house of Callao from January 1 to February 28, 1895, and the imports for the rest of the year, as shown in the consular invoices, is as follows:

Countries of production.	statistics from <b>Mar</b> . 1	Customs statistics of Callao, Jan. 1 to Feb. 28.	Total for 1896.
Great Britain		\$281, 126 140, 733	\$4, 377, 095 1, 792, 918
France Chile United States	937, 651	64, 982 103, 572 44, 262	1, 11d, 054 1, 041, 223 940, 240
BelgiumItaly	466, 751 359, 809	23, 166 17, 092	489, 317 376, 901
Brazil	75. 077	4, 650 1, 430	200, 817 79, 727 57, 557
Portugal Salvador	46, 648 35, 262	65	46, 648 35, 262
Total		681,078	19, 927

The value of the imports as shown by this table are nearer \$11,000,000 than \$8,000,000. A comparative table of the official values of imports and exports during the five years from 1892 to 1896 is as follows:

Years.	Imports.	
1892 1893 1894 1895		\$13, 060, 800 11, 240, 850 7, 275, 900

The Belgian consul at Lima gives the following estimate of the share taken by the principal competing countries in the trade of Peru:

Countries.	Imports into Peru.	Exports from Peru.
England	Per cent. 39. 3	Per cent. 55. 7 6. 4
Chile. France United States Belgium	10. 2 9. 2 7. 5	11.0 3.0 5.3
Dialiti	zed by G	noole

The following extracts are from a British Foreign Office report (annual series 2117):

Gold.—The late discoveries of quartz and placer gold mines in the districts of Sandia and Carabaya have induced many persons to prospect during the year, but as a rule they express themselves disappointed on their return, chiefly owing to the many difficulties they have to contend with, outside of the natural ones arising from want of roads and the action of the local authorities, who do not seem to encourage the development of that part of the country as they should. Revolvers and shotguns are admitted, but no rifles. Those who come as pioneers, with the intention of going to an outirely unexplored region abounding in savages and wild beasts, naturally want better arms to defend themselves with than revolvers and shotguns. Again, when the explorers get to the confines of civilization and reach their starting point for the further interior where gold is found, they fall into the hands of men who speculate on the labor of the Indians. The houses of the labor contractors are probably the only ones inhabitable in the village, and there travelers are obliged to stay, for a consideration generally about ten times whatitshould be. To them you must apply for Indians, mules, llamas, or donkeys to carry your provisions, etc.. a part of the way in (beyond a certain point it will not admit of animals), and as no Indian will dare treat direct with a foreign traveler, these contractors will put every obstacle in the way of procuring Indians and animals so as to prolong the stay in the village. The Indian will receive, say, 1s. (24 cents) a day from the contractor for the services of himself and his animal, and the traveler will have to pay at least 4s. (97 cents) a day to the contractor; and at length, when able to start, so many days' hire of the Indians must be paid in advance. All this makes an expedition in search of gold too expensive to be undertaken by the class of men best able to accomplish the object of developing an unexplored country, on the chance of some good finds of the precious metal. Still, there is no dou

Copper.—Veins of copper, abundant and rich, have been found in the Cerro do Pasco silver mines. Ores containing 30 to 40 per cent of copper are remitted in their crude state to Lima for shipment to Europe, those of lower grade being deposited until furnaces can be built to concentrate them. The copper industry would be very profitable should the railway from Oroya be continued to this place, or a light line constructed. The distance is about 65 miles, over level country, and the cost would be small. The quantity of ore that might easily be produced would be at least 2,000 tons per month. The capital required to carry out this work would not be large,

and would be a very good investment.

Petroleum.—There are three companies engaged in extracting this article in the department of Piura—one British, one Italian, and one French. The British concession covers 600 square miles, and the output averages 800 tons a month of crude oil. This is pumped (no flowing wells existing) into a deposit tank with a capacity of 15,000 barrels, and thence through a pipe to the tanks at the seashore, where it is loaded directly into the vessels. The Italian company has wells yielding some 1,200 tons per month. The French company has only six wells, the work being in its infancy. The kerosene can not compete in quality with that produced in the United States, the oil being of an asphaltum nature.

Industries.—A manufactory of cotton goods, principally unbleached, and another for woolen fabrics have been opened during 1897, the former, worked by water power, on the road to Arequipa, and the latter in the city itself. Both are turning out good work and are able to compete successfully with European manufactures, but the output is small as yet and has not sensibly affected imports of similar articles from Europe and the United States. Cuzco, a city of about 20,000 inhabitants, 400 miles in the interior, has also a large manufactory for woolen cloths, blankets, etc. Although not of fine quality, these goods are of pure wool and well suited for the climate of the interior towns that, ranging at from 8,000 to 12,000 feet above the level of the sea, are sufficiently cold to require warm clothing.

### URUGUAY.

A British Foreign Office report (annual series 2097) gives the total imports in 1897 as \$19,352,216, against \$25,529,735 in the preceding year. The exports in 1897 were \$28,427,937, also showing a decrease as compared with the figures for 1896, which were \$30,389,092. The decrease in trade was due to the civil war, which lasted from March to November. Great Britain has 28 per cent of the imports and 6 per cent of the exports.

Digitized by Google

Consul Swalm, of Montevideo, gives the following statement of imports and exports in the first six months of 1898:

Articles.	Exports.	Articles.	Imports.
Live stock. Slaughterhouse products Agricultural products Other products. Various. Provisions for vessels	14, 922, 467 2, 957, 412 100, 907 1, 507	Drinks in general Comestibles, cereals, and spices Tobacco Stuffs and woven goods Clothing Raw materials and machinery Various articles Live stock	3, 136, 235
Total	18, 250, 026	Total	13, 246, 372

Exports of products of the slaughterhouse, says the consul, are steadily decreasing. This has been attributed to the war between the United States and Spain, but Mr. Swalm says that American products are supplanting competitors in the Cuban and Brazilian markets. In the exports of wheat and corn, there has been a corresponding increase. Although no figures as to imports from the United States during 1898 are available, the consul says that lumber, oil, agricultural implements, etc., are increasing. Canned goods are appearing in the market in larger quantities, although the heavy duties prevent general use. United States manufacturers are winning their way slowly but surely in Uruguay.

#### VENEZUELA.

In a British Foreign Office report (annual series 2094) the imports into Venezuela in 1896-97 were estimated at \$13,241,000. The imports from the United States, England, and Germany represent, respectively, about 41, 31, and 21 per cent of the total. The following details as to trade in 1897 are taken from the official returns of the countries named:

Great Britain.—Imports from Venezuela, \$291,000; exports to Venezuela, \$2,725,000. Principal articles of import, feathers (\$175,194) and rubber (\$58,398). Principal articles of export: Cottons, \$1,806,605; manufactures of jute, \$116,796; linen, \$111,930; woolens, \$121,663; tools and machinery, \$121,663; iron and articles of, \$136,262.

Germany.—Imports from Venezuela, \$2,558,000; exports to Venezuela, \$1,358,000. Principal imports: Dividivi, \$107,100; skins, \$81,158; rubber, \$50,932; coffee, \$1,748,110; cacao, \$305,164. Exports: Cottons, \$128,758; hosiery, etc., \$52,360; iron articles and machinery, \$168,980; cement, \$29,274; beer and malt, \$114,716; porcelain, \$60,452; clothing, \$29,750.

France.—Imports from Venezuela, \$5,025,000; exports to Venezuela, \$978,000. Chiefarticles of import: Coffee, \$4,250,000; cacao, \$1,620,000. Exports: Tools and articles of iron, \$436,000; wines, \$97,000; cottons, \$87,000.

The United States imported from Venezuela in 1897 to the value of \$9,543,572 and exported products worth \$3,417,522. The trade by articles is not stated for 1897, but according to United States Treasury figures for 1896 the chief articles of import and export were: Imports: coffee, \$8,128,254; cacao, \$125,478; skins, \$1,107,411. Exports: Flour, \$812,192; cottons, \$668,306; machines and articles of iron, \$471,417; illuminating oils, \$142,053; lard, \$452,870.

# ASIA.

The commerce of the United States with the countries of Asia during the last ten calendar years, is shown in the following tables, compiled by the Bureau of Statistics of the Treasury Department:

#### ADEN.

Consul Cunningham, of Aden, says that in the fiscal year 1897–98, the imports were \$12,713,865 and the exports \$11,171,855. Of the exports, \$1,754,095 went to the United States. There has been a decrease in the exports of coffee. Skins represent an important and growing value in the export trade. Ivory, mother-of-pearl shells, feathers, gum arabic, and curios are also exported. Imports from the United States amounted to \$799,122—practically the same as for the previous year. The chief article is cotton goods; the United States has two-thirds of the entire trade in this line. These cottons are sent up and down the Red Sea coast and into the interior of Arabia; they also cross to Abyssinia and are transported into the interior of that country. The next most import ant import from the United States is petroleum. Liquors, tobacco, preserved fruits, canned meats, bicycles, and a few shoes are also imported.

#### BRITISH INDIA.

Consul-General Patterson, of Calcutta, gives the following table of trade for the fiscal year 1897-98:

Articles.	Imports.	Articles.	Exports.
Merchandise. Gold Silver. Total	22, 571, 788 40, 904, 698	Foreign merchandise reexported Indian merchandise Gold Silver Total	290, 738, 913 7, 355, 472 4, 760, 451

The imports for 1896-97 were stated at \$263,469,000 and the exports at \$337,404,000. The consul-general says:

The total value of the trade—imports and exports together—was higher by 0.38 per cent than in 1896-97, and only 3.28 per cent less than in 1895-96, which was a year of good trade. In this calculation, the transactions in treasure, which amounted to 14.2 per cent of the total trade, are included; but excluding them and dealing with merchandise only, the trade of last year shows a decrease of 5 per cent compared with 1895-96. The decline in imports of merchandise is 3.5 per cent compared with 1895-96. The serious decline in the trade of the year occurs in the exports of merchandise, the value of which was 6.1 per cent less than in 1896-97, and 14.6 per cent less than in 1895-96. The contraction in 1896-97 was clearly traceable to the failure of the crops in 1896

Digitized by GOOGIC

and the outbreak of the plague in western India, with the consequent disorganization of trade. These two calamities have also had a marked effect on last year's trade.

of trade. These two calamities have also had a marked effect on last year's trade. The total value of imports of foreign merchandise in the last three years was distributed among the principal countries with which the trade was carried on, as follows:

Countries.	1895 <del>-9</del> 6.		1896–97.		1897 <b>-9</b> 8.

Ceylon	1, 679, 487	0.8	2, 161, 193	0.9	3, 320, 540	ī.
France	3, 034, 807	1.4	2, 852, 397	1.3	2, 736, 667	î.

The principal clothing of 250,000,000 of the population of India is cotton, and the value of cotton goods imported in 1895-96 represented about 37 per cent, in 1896-97 11 per cent, and in 1897-98, 38 per cent of the value of all imported merchandise. I have already, in previous reports, stated the immense demand there is here for cotton goods, and the opportunity for the manufacturers of the United States to get their share of the trade by making proper efforts. The door is open, and our manufacturers have only to walk in and take possession of the market.

There is a steady increase in the demand for bicycles, and the better qualities from

the United States are generally preferred.

#### CEYLON.

Imports in 1897, says Consul Morey, of Colombo, were \$28,580,000 (exclusive of specie), an increase over the previous year of \$2,880,000. Of this increase, \$1,560,000 is credited to the United Kingdom, \$180,000 to Germany, and \$33,500 to the United States. There were decreases from France, Russia, and certain Asiatic countries. The increase was largely in arms and ammunition, cotton goods, earthenware, fish, grain, hardware, haberdashery and millinery, metals, etc. The exports to all countries amounted to \$25,270,000. These consist of coffee, einnamon, cocoanut oil, einchona bark, plumbago, tea, etc. The greatest decrease in value was in cinchona bark. Coffee also decreased, but tea, the new product of the island, increased notably.

#### CHINA.

In the report of the inspector-general of customs for China for the year 1897 Mr. F. E. Taylor, the statistical secretary, says:

In comparing the foreign trade during 1897 with that of the preceding year, it must be remembered that the aggregate value of imports and exports during 1896 exceeded the total of any previous year. A further advance in the total value of the trade is to be recorded, but the improvement is chiefly in exports. The total value of the trade was 336,329,983 haikwan taels (\$271,002,603).

Considering how imports were checked by the low exchange, this result is encouraging. Probably the most noticeable feature in the trade is the continued advance

made by Japan.

The net value of the import trade exceeded that of all other years, being 202,828,625 haikwan taels (\$149,890,353), as compared with 202,589,994 haikwan taels

<sup>&#</sup>x27;From the quarterly valuations furnished by the United States Director of the Mint, the average value of the haikwan tael in 1897 was 73.9 cents.

in 1896, which held the record. This result, in view of the difficulties with which

importers had to contend, comes rather as a surprise.

The trade in cotton piece goods, as was expected, shows a falling off from the figures for 1896. American goods, however, continue to increase in favor, drills showing an improvement of over 300,000 pieces, jeans of over 15,000 pieces, and sheetings of nearly 170,000 pieces; but these are almost the only exceptions to the general decline. Shirtings of all kinds, except plain dyed, fell off. Drills, except American, show a heavy decrease, while jeans improved. Of sheetings, except American, less were imported by over half a million pieces. On the whole, the year, owing to the full in exchange and the heavy stocks carried over from 1896, was one owing to the fall in exchange and the heavy stocks carried over from 1896, was one of the worst on record for the piece-goods trade. The favor which American goods find in the Chinese market is due to their cheapness. Freights from America are lower than from Europe. The importation of inferior qualities of plain goods seems likely to cease, the products of Chinese mills gradually taking their place. While the importation of English and Indian cotton yarn fell off in 1897, that of Japanese yarn more than doubled.

All kinds of woolen piece goods, except lastings, show a decrease, while miscel-

laneous piece goods slightly improved.

With a decline in piece goods and metals, we have to look for increases in sundries to explain the satisfactory total of foreign imports, and we are at once struck by the astonishing progress made in the importation of kerosene oil, the total increase for all kinds amounting to over 32,000,000 gallons. American oil is finding vigorous rivals in Russian, and especially Sumatran, oil. To go back three years for purposes of comparison: In 1894 the figures were, American, 61,670,853 gallons; Russian, 17,500,283 gallons; Sumatran, 534,280 gallons; while in 1897 they were, American, 48,212,505 gallons; Russian, 36,924,125 gallons; and Sumatran, 14,212,278 gallons. The importation of raw cotton, a significant item, jumped from 99,129 piculs (13,217,200 pounds) in 1896 to 166,256 piculs (20,707,466 pounds), and, while European matches fall to about helf the figure for the preceding year. matches fell to about half the figure for the preceding year, Japanese matches rose from 7,793,000 to 8,974,000 gross. Sugars of all kinds show increases, which are also noticeable in brass buttons, window glass, and umbrellas.

Exports.—Low exchange is evidently causing a steady increase in the export trade. In spite of a further falling off in the shipments of tea, the value of the exports exceeded that of 1896 by over 32,000,000 tacls. The year 1895 held the

record with a value of 143,293,211 tacls, but 1897 has beaten this easily and stands at 163,501,358 taels (\$120,950,130). Almost every item except tea has shared in the

Consul Fowler, of Chefoo, in a report published in Consular Reports No. 215, August, 1898, says:

From the abstract of statistics for 1897, I have compiled the following as of interest to the United States:

Countries.	Imp	orts.	Exp	orts.	To	tal.
Great Britain United States Continent of Europe (Russia excepted) Japan (excluding Formosa) All the Russias Hongkong All the rest of the world	Hk. tasls. 40, 015, 587 12, 440, 302 8, 565, 807 17, 564, 284 3, 442, 449 90, 125, 887 35, 120, 678	\$29, 571, 519 9, 103, 383 6, 330, 131 12, 980, 006 2, 542, 971 66, 603, 030 26, 954, 181	Hk. taele. 12, 945, 229 17, 828, 406 25, 878, 118 15, 832, 034 16, 410, 439 60, 402, 223 13, 410, 206	89, 566, 524 13, 875, 192 19, 123, 929 11, 719, 873 12, 127, 314 44, 637, 243 9, 920, 142	Hk. taels. 52, 960, 810 30, 208, 708 34, 443, 925 33, 396, 318 19, 852, 888 150, 528, 100 48, 530, 884	\$39, 128, 043 22, 358, 574 25, 454, 061 24, 679, 879 14, 671, 284 111, 240, 273 35, 864, 323

Value of trade by countries in 1897.

Comparing these figures with those for 1890, it will be seen that, while Great Britain has not quite doubled, the United States has trebled, her exports to China in the last eight years; that Great Britain's purchases have decreased, while those of the United States have more than doubled; that the value of United States exports to China is greater than those of all continental Europe and the Russias, European and Asiatic. The United States bought more of China than either Great Britain, Japan, or all the Russias, and more than the combined purchases of India, Singapore and Straits, Australia, New Zealand, etc.; South Africa, including Mauritius; British America, South America, Macao, l'hilippine Islands, Cochin China, Annam and Toukin, Siam, Java, Sumatra, Turkey in Asia, Persia, Egypt, Algiers,

Aden, etc. (these divisions I have set in the above table as "all the rest of the world"); and could we get the statistics of our trade passing through Hongkong, I think we would be able to show that we sold at least 10,000,000 taels more than the customs tables account for. It is also known that a very considerable part of the imports from England—at least to the value of 8,000,000 taels—are really United States goods, shipped via London, and more or less merchandise is sent via British America. I firmly believe that our trade sales to China last year amounted to nearly 30,000,000 taels (\$22,170,000).

In his annual report, dated October 24, 1898, Mr. Fowler adds:

Statistics for the first six months of this year seem to show that when the books for 1898 are balanced the value of American merchandise imported at Chefoo will lead all others. It will possibly equal, if not exceed, the values for all Europe.

The value of American flour imported during this period was greater than for the combined years of 1894, 1895, 1896, and 1897, if we take the only fair standard—the customs tael. The gold value for the four years (averaging the haikwan tael for that period at 79.3 cents) was \$43,470.67, against \$41,393.87 (at 68.5 cents) for the dullest six months of the year 1898. This is truly a wonderful increase. No doubt, the presence of the great military camps of Russia, Great Britain, and Germany in this vicinity has had considerable to do with this increase. Further, this is the first year that the customs reports for Chefoo make mention of American flour. American ginseng also makes its first appearance this year. This is all the more remarkable, because hitherto Chefoo has always been the entrepôt for Korean ginseng entering China.

It is also shown that in 1897 the imports of all our goods were four times as large as those for 1893 (excepting oil, which was a little more than doubled); that the imports for the first six months of this year exceeded those for the entire years of 1893 and 1894 in the case of drills, and in the case of jeans and sheetings, every year

excepting 1897.

Of the 76 classes of imports enumerated in the table of imports for 1897, 46 show a gain over 1893—25 from gold-standard countries, of which 3 are from Japan, 4 from the United States, while the only gain from England is cotton yarn. Of the 32 decreases, 8 are from silver-standard countries and 24 from gold-standard countries, of which Great Britain (England and India) suffered losses in 7 classes; Russia, 1;

Japan, 1.

The value of the foreign imports into Chefoo in 1897 was 11,625,004 haikwan taels (\$8,602,547 gold), while the value of those goods specifically classed as American was While this is almost one-fourth of the entire 2,813,086 haikwan taels (\$2,081,684). value of foreign imports, it is not to be supposed that it represents all our trade; for, as repeatedly stated in previous reports, the data for all the other unenumerated American imports are not obtainable. In the customs classification of foreign imports, the great majority comes from Hongkong, Japan, and other Asiatic countries; and there are many classes of produce—opium, seaweed, etc.—in which we do not compete. The value of Asiatic goods imported was 2,137,111 haikwan tuels (\$1,579,325).

The value of known English imports in 1897 was 288,203 haikwan taels (\$213,270). In other words, the value of imports into Chefoo in 1897, specified as American, was almost ten times greater than those specified as from Great Britain. Of the 86 political divisions enumerated in the Review of the World's Commerce, 1896-97, pages 26-27, only 29 show a greater value of our exports than this single Chinese port of Cheroo; and if the returns here could be had as accurately as those given in the Review, perhaps not more than 20 would exceed Chefoo. If we take the value of the imports especially classed American for the three northern ports of China-Tientsin, Niuchwang, and Chefoo-for 1897, as given in my report of the trade of North China, as \$8,360,561 gold, our sales in North China were exceeded only by 14 entire divisions, and exceeded our combined sales to all the Central American States. The sales of American cotton manufactures in Chefoo alone in 1897 (2,058,274 haikwan taels, or \$1,523,022.76) exceeded those to any country or colony in the whole world, were greater in value than our sales in this line to Great Britain and Ireland and all Europe combined, and represented one fourth of the entire sales to China. Of American kerosene oil, Chefoo bought 5,281,060 gallous, valued at 739,287 haikwan taels (\$547,072.38), or more than all the Central American States and British Honduras, all the West Indies, and one-sixth of the sales in this line to all China.

Consular Reports No. 215, August, 1898.

The trade for the first six months of this year is shown below:

Description.	Quantity.	Val	ue.
Total value of foreign imports into Chefoo from Jan. 1 to June 30, 1898 Direct imports from—		Haikıcan taels. 7, 387, 338	\$5, 067, 726. 43
Great Britain		714, 880	97, 775. 49 489, 692. 80
United States		4, 918	31, 294, 23 8, 368, 73
Japan Taiwan (Formosa) Europe (excepting Germany)		53, 744	844, 739, 16 36, 814, 66 99, 606, 91
American sheetingspieces American drillsdo	230, 180	805, 630 196, 069	551, 856. 55 134, 307. 2
American jeansdogallonsgallons	2, 720 1, 475, 770	7, 112 209, 561	4, 873. 60 142, 549. 29
Flourpounds	133	60, 429 124	41, 393. 8' 84. 94

Thus, while the total value of foreign imports for the six months ended June 30 was \$5,067,726.43 gold, the value of only five classes of American merchandise (including the direct imports for the same period) totaled \$875,087.60 gold, or \$184,643.67 more than the total value of the combined imports from Great Britain, Hongkong, and all Europe, including Germany; while the direct imports (i. e., merchandise making first entry into China at Chefoo) from Germany are valued at \$3,368.73 gold, or only about a tenth of the direct imports from the United States. I have not included anything in the American totals except goods classed American, no account having been taken of the thousands of dollars' worth of provisions, canned goods, machinery, lumber, etc., which would bring the total value up to the first rank. There is not the least doubt that our trade in the north of China is of paramount importance. It is known that over six ships are under charter with Oregon lumber for work being done by the Russians near here, and already there is a five-masted American schooner discharging lumber at Kyaochau.

schooner discharging lumber at Kyaochau.

The custom-house jetty is always crowded and piled high with American merchandise. One of the greatest needs of the American merchant is an American bank in China. There is a large field for it, and I feel confident that if one of our New York banking houses established a branch in Shanghai, they would reap a handsome reward. There are in China, French, Russian, German, and several English banks; and it is through these that all United States trade is conducted, involving a great loss to our commerce. I have hopes that ere long, some one will prove enterprising enough to enter this field. There is none more profitable in the world. The Hongkong and Shanghai banks' shares sell at 215 per cent premium. There is also a most

promising opening for fire-insurance companies.

Consul-General Goodnow, of Shanghai, says that the fact that tradewith the United States has increased, in spite of the decrease of shipping consequent upon the war with Spain and the disturbed political conditions in China, shows the solid basis of mutual demand. The great staples of export from the United States to China—kerosene and cotton goods—were in greater demand in 1897 than in 1896. The imports from the United States into Shanghai in 1897 were valued at about \$8,000,000. He continues:

We do not advertise enough here. I do not mean by this, newspaper advertising or advertisement by circulars. These appeal to only the few thousand foreigners sojourning here, but do not reach the hundreds of millions of Chinese. They will learn to appreciate our goods only by seeing them. I do not know to-day where in Shanghai I could buy an American hat, or shoe, or underwear, or collars, or furniture, or a telephone of improved quality, or a magazine. I might make this list much longer. What goods we send here are usually put into the hands of people of other nationalties, who do not exploit them. I hope to see an exposition of American goods here in Shanghai, managed by Americans. It would pay to put one also in Canton and one in Chefoo or Tientsin.

In the next piace, we do not cater to the trade here. Our steel mills have not supplied the rails for the railways in northern China, because the pattern is English and to make them would necessitate new rolls. The cotton men are just beginning to inquire if the widths, etc., they have been accustomed to make in America are what are really wanted in China. Only one American life insurance company has

reached out for this trade with any vigor. If this trade is to be taken and kept by America, its needs, customs, and superstitions must be studied on the ground by

experts in each department.

In the third place, our merchants must be willing to settle disputes in regard to damages in shipment and disagreements as to quality and breaches of contract, as is done by English and Germans. The average dealer here will pay a higher price for an article, if he knows that a cheap and speedy method of settling any possible dispute can be had.

Consul Johnson, of Amoy, in a report appearing in Consular Reports No. 218, November, 1898, says:

There is an unlimited market in China for any article of food the price of which can be brought within reach of her countless millions. An article, even a little beyond the reach of the masses, still finds an ample market with other millions of people who compose the middle classes. In this connection, I wish to call attention to the recent efforts to introduce maize into foreign countries as an article of food. With the price of corn flour always 50 per cent less than that of wheat flour, it is possible to find a market here for the surplus corn of the Western States.

American canned goods are slowly gaining a foothold. The difficulty encountered

here, as in other lines, lies in the scarcity of American merchants and special advertising agents, and the lack of a disposition on the part of our manufacturers and exporters to cater to the peculiar wants of the Chinese trade. There is a certain superior quality recognized in many kinds of canned goods which reach the Far Eastern market from the United States, but this is too often counterbalanced by higher prices, and these prices are frequently open to the suspicion of having been made by the local dealer or middleman, rather than justified by the exporting price.

What is especially needed in Chinese ports is sample mome, where specimens of American cotton fabrics of all kinds would be displayed, where canned fruits, vegetables, meats, and other articles of current demand could be inspected, and prices given, together with the names of exporters. There is such a sample room here at Amoy, in connection with the Japanese consulate. The expense is nominal and the results beyond comparison.

In a letter to the Secretary of the Treasury recommending the appointment of a commercial mission to China (House Doc. No. 536, Fifty-fifth Congress, second session) the Secretary of State, referring to the trade openings in the Far East, said, under date of June 9, 1898:

The value of these markets is sufficiently exemplified by the eager rivalry of the European powers in obtaining the largest possible spheres of influence in them, which has been one of the most striking features of diplomatic effort in recent years. Without reference to schemes of this character, it would seem to be obvious that the United States has important interests at stake in the partition of commercial facilities in regions which are likely to offer developing markets for its goods. Nowhere is this consideration of more interest than in its relation to the Chinese Empire. As is well known, three great European powers have established themselves at points of vantage in that Empire which will enable them to exercise a direct influence upon its commercial destiny

The United States, though it has made no acquisition of Chinese territory, is in a position to invite the most favorable concessions to its industries and trade. much as our commercial relations with China are already most friendly, and the existing trade between the United States and China is in actual process of development, it would seem to be clear that the present is a golden opportunity for enlarging the channels of commercial intercourse with the Empire. Not ealy in China itself, but in the contiguous possessions of Russia, the markets for American products seem to be capable of easy enlargement, provided the conditions are thoroughly understood and proper advantage is taken of the present situation.

The Chinese Empire has an area about one-half that of the United States, exclusive of Alaska, with a population of over 400,000,000. Its foreign commerce amounts to about \$200,000,000. In 1896, Great Britain had more than two-thirds of China's commerce, Japan ranking second with about one-eleventh, and the United States third with one-twelfth. In other words, the United States has already a larger share of Chinese trude than any European country other than Great Britain. Chine's industrial development is in its infancy, but within the last few years, a number of cotton mills have been built and railroads projected, largely with the aid of American enterprise and industry. The Empire has numerous deposits of coal, iron, copper, and other mineral products, affording an unlimited field for development.

The total trade of the United States with China is difficult of accurate determina-

tion, for the reason that a considerable part of it is transacted by way of the British colony of Hongkong; but from the best information obtainable, it may be said to approximate \$35,000,000.

#### HONGKONG.

# Consul-General Wildman, of Hongkong, says:

A careful survey of the economic conditions of Hongkong during the first half of the year 1898 reveals two facts: First, a general, permanent increase of trade; second, unusual activity in mercantile circles, owing to the great demands made on the local market by the large American squadron and army on this coast. While this second condition may be temporary and may carry with it corresponding depression in some lines, I predict that it will be of great permanent benefit to American exporters. Nothing that could have happened to this coast would be of so great a help in the introduction of American goods into these markets, as the presence of so large a body of American consumers in our midst. Our forces of occupation have done more than conquer a country; they have made an impression on Asiatic markets that can never be effaced. When our fleet first arrived here (in February, 1898), there were a few sample cases of American tinned milk, fruits, meats, whisky, beer, etc., in the big English and German wholesale houses. The imports from America were made up almost wholly of California flour and American kerosene. To-day, every steamer and ship from America brings cargoes of American goods. While their ultimate destination is Manila, they are handled by European firms here and come before the public in such imposing quantities that, first, curiosity is aroused, and demand follows. The great difficulty in the past has been to get the great body of Chinese consumers to sample our manufactures. Even if this were possible, the goods came over in small consignments and at prices which were prohibitive to all but those who could afford to pay for luxuries. With the infinx of the Americans into Manila, American firms have found it to their advantage to send out men to study the needs of this climate. Already, one house has been established in Hongkong, with a branch at Manila, which is meeting with gratifying success. I am informed that there is a shipment of 45,000 bales of upland cotton from Texas on its way here, whi

The trouble with the introduction of cotton hitherto has been that American producers have tried to place on the market the lowland cotton, which is too heavy a staple, besides being too expensive. Even our upland cotton is superior to the best Indian growth. The new cotton-spinning mill, regarding which I wrote on January 15, 1898, is nearing completion, and it is hoped will be in operation early in the year. It will create a new market for cotton in this colony. If our upland cotton can continue to compete with the Indian and Chinese growths, the demand will be almost unlimited, as Hongkong is the feeder for three of the richest provinces of

southern China, with a population of over 80,000,000 people.

A representative of a cotton-spinning works in Connecticut is expecting, in a few days, to receive a full line of samples which were made according to specifications sent from here. He told me that the managers had never understood this market before, and, now that they did, they would find no difficulty in introducing their goods. He has also solved a problem regarding which every consul in the East has been reporting for the last decade—that is, that it is impossible to obtain the same prices for the same quality of goods on the Asiatic coast that you do in America. Our merchants never seem to realize that Hongkong (the feeder of southern China) is an absolutely free port, and that goods manufactured in the United States come from a country in which a tariff prevails. If the American manufacturer wishes to compete in these markets, he must deduct from the price of his goods the extra amount he usually adds on account of this protective tariff.

Since the arrival of the American squadron, at least three brands of American beer have firmly established themselves here, and one brand of whisky. Canned meats and fruits have also come to stay. Our bicycles are favorites, but as the opportunity of using them is restricted, the demand can never be great or worthy of serious competition. Within the last three months, the agent of an American sewing machine obtained an order for 1,200 machines from an English firm and at the same time an order for a considerable number of bicycles, which his company makes with the same plant that they use for the sewing machines. There will be an increasing demand for cheap sewing machines among the Chinese, and energetic

measures ought to be taken to control the market.

The trade with the Chinese is a peculiar one, requiring much patience, tact, and perseverance. Generally speaking, the class of goods most in demand is of a cheap, flashy nature, commonly known as Birmingham wares, and those of a kindred class, "made in Germany," in imitation. The Germans are the sole importers of the latter, and their small commissions and methods of doing business enable them to com-

<sup>&</sup>lt;sup>1</sup>See Advance Sheets No. 59 (March 12); Consular Reports No. 211 (April, 1898).

pete keenly with the former. The method of carrying on business is peculiar to the East. Credit of from three to four months is usually given, but it is worthy of note that its observance is oftenest respected in the breach. In consequence of keen competition the agreed term is often disregarded, the Chinaman taking delivery and paying for his goods in installments to suit his convenience. In spite of this, fresh sales are successively made with him on same terms, until this style of trading has now become generally established. A trade-mark, or "chop," after it has secured popularity, is of far more importance than the quality of the article itself. A marketable article bearing anything but a favored chop will often prove unsalable, almost at any price, and the Chinese not unfrequently use this as a pretext for depressing the market and refusing t take delivery of orders, when the slightest shade or shadow of a difference, either in size, color, or design of a chop can be detected.

It must be borne in mind, however, if one accepts their methods of doing business and grants long credits, that, generally speaking, the Chinese merchants are reliable and trustworthy, large transactions being often successfully financed with nothing stronger as a bond than their word or a book record of the facts, written and retained by the principal.

by the principal.

These facts about the Chinese should be borne in mind by American merchants who contemplate doing business not only in China, but in the Philippines, as in the latter place the Chinese are not only doing important business, but are controlling

Regarding our principal imports from America—kerosene oil and flour—there is a steady demand. During the two weeks ended September 27, Shewan, Tomes & Co. report the arrival from the Pacific coast of seven steamers, carrying 527,132 sacks of flour, at a selling price varying from \$1.40 to \$2.35 Mexican per sack.

For the half year ending September 30, 1898, the exports from this colony to the United States, as invoiced in this consulate, amounted to \$4,843,016 Mexican.

The following imports of the colony are of interest to the United States:

Articles.		Quantity.
Flour	tons	85, 90-
Cotton warm and cotton	do 1	30, 58
Hemp	do	43, 36
Kerosene	· · · · · · · · · · · · · · · · · · ·	,
In bulk	do	47, 78
In cases		1, 689, 68
Lead	tops	5, 49
Sugar Timber	do	211, 77
Timber	do	64.86

All of these items show an increase over the year 1896.

#### DUTCH INDIA.

The total imports into Dutch India in 1895, according to official returns, were \$68,308,000, and the exports \$95,000,000. No later figures for the total trade are available, but the following table has been compiled from statistics of the several governments represented, showing the trade of the principal countries with Dutch India in the last years for which they have been published:

Countries.	Imports from Dutch India.	Exports to Dutch India.
Great Britain (1897). Netherlands (1896). France (1896) Germany (1897). United States (1898).	14, 034, 860	\$10, 090, 565 21, 211, 932 501, 500 8, 667, 342 1, 222, 282

A British foreign office report (annual series 2095) gives the following table of the principal imports into and exports from Java (including Madura) in the year 1897:

#### IMPORTS.

Articles.	Value.	Articles.	Value.
Cotton goods, unbleached: Holland. England. Cotton goods, bleached: Holland. England. Cotton goods, printed and colored: Holland. England. England.	3, 231, 356 1, 532, 948 1, 518, 348	Cotton goods, printed and colored— (continued): Other countries	\$564, 514 321, 189 773, 774 1, 795, 739 452, 585 223, 859

#### EXPORTS.

Articles.	Quantity.	Articles.	Quantity.
Sngar tons Coffee do Tobseco pounds Tes do Arrack gallons	45, 000 30, 200, 000 11, 200, 000	Indigo pounds Hides pieces Cinchons bark pounds Pepper do Cocoa do	435, 000 8, 450, 000 12, 400, 000

United States Consul Everett, of Batavia, notes an improvement in the sugar industry. Coffee, however, is suffering from Brazilian competition. The oil trade is in a depressed condition, owing to the declining supply. There is much undeveloped ground, but capital is lacking, and the consul thinks that there is an opening for American enterprise.

# FRENCH INDO-CHINA.

According to French official statistics, the commerce of the French possessions in Asia, in 1896, was:

# IMPORTS.

Countries.	From foreign countries	From France.	Total.
French India. Cochin China, (including Cambodia). Anam, Tonkin.	\$496, 000 6, 523, 400 3, 243, 000	\$135, 100 } 4, 496, 900	\$631, 100 14, 263, 300

#### EXPORTS.

Countries.	To foreign countries.	To France.	Total.
French India Cochin China (including Cambodia) Anam, Tonkin	\$3, 441, 190 13, 529, 300 1, 659, 800	\$443, 900 } 3, 242, 400	\$3, 885, 090 18, 431, 500

A British Foreign Office report (2060, annual series) gives the following details of trade in Cochin China in 1897:

The export of rice was 593,000 tons, an increase over that of 1896. Other products exported were fish, 22,480 tons; salt, 15,000 tons; hides, 2,690 tons; copra, 1,940 tons; cotton, 4,600 tons, etc.

The foreign trade is largely with France. Cotton goods and wine are imported from that country to the annual value of some \$34,000 each. The area and population of the several colonies, etc., are given by the Statesman's Year Book as follows:

		Population.
French India. Anan Cambodia. Cochin China Tonkin	Sq. miles. 197 81,000 46,000 22,950 122,000	286, 910 6, 000, 000 1, 500, 000 2, 035, 000 12, 000, 000

#### JAPAN.

Consul-General Gowey, of Yokohama, gives the imports in 1897 as \$109,650,000, and the exports as \$79,694,000. Imports of merchandise for the first seven months of 1898, according to Japanese official returns, were \$88,182,852, and exports, \$40,930,018. The principal imports and exports for the period were:

# IMPORTS.

Note by Bureau of Foreign Commerce March 20, 1899: According to figures just received the value of imports into Japan in the calendar year 1898 was \$138,196,000 and of exports \$82,745,000. These figures include the transit trade.

The trade with the principal countries, in 1897, is stated by Consul-General Gowey as follows:

Exports.	Imports.
\$10,662,000	\$14, 632, 00 6, 013, 00
2, 781, 000	14, 887, 00 4, 432, o0
93, 000 4, 240, 000	1, 337, 00 32, 703, 00
18, 106, 000 1, 103, 000	2, 573, 00 9, 071, 00 13, 515, 00
	\$10, 602, 000 12, 695, 000 2, 781, 000 2, 598, 000 93, 000 4, 240, 000 18, 104, 000

A British Foreign Office report (No. 2109, annual series) says that as compared with 1896, Great Britain's imports into Japan increased by about 5 per cent; British India and Hongkong also show a satisfactory improvement; imports from British America and Australia have likewise grown. Germany has only 8 per cent of the import trade, as compared with 10 per cent in the previous year. The United States has acquired a very largely increased share of both the import and export trade, the values having risen to no less than 57 and 55 per cent, respectively.

The following extracts are from the annual report of Consul Lyon, of Hiogo:

In the year ending December 31 last, the United States exceeded all other countries in exports to and imports from Japan, of the commodities named in the following tables. The declared values of the same are stated, together with those of the chief competitors for this foreign trade.

All other countries, \$30.

Railway locomotives.—England started the railway system of Japan, and was thus given a natural precedence in the railway development of the country; but, as may be seen by the foregoing table, she has not maintained her lead. The United States has proved its ability during the last three years to compete with and outdistance its great rival. In 1895, England exported locomotives to Japan valued at \$380,935, against \$142,165 worth from the United States. This year, exportations of locomotives to this country stand thus: Great Britain, \$899,130; United States, \$1,191,906.

This is a field of industry which has been properly worked, and in which the superior merits of American locomotives have been recognized, or no such results

could have been obtained.

Railroad iron.—The contest for supplying Japan lies between England and the United States, and it is likely that it will continue. In 1895, Great Britain furnished nearly all the railroad iron imported into this country, a very small quantity having been exported from Belgium and Germany; the United States supplied none. In 1896, the United States exported only a little more than one-sixth as much of railroad iron to this country as England did; but in 1897, a very notable increase took place from the United States in such shipments, and exportations from the two countries stood thus: Great Britain, \$810.110; United States, \$615,018.

At this rate, another year will show the United States to have left its competitor

in this export far behind.

Iron—bar and rod, plate, sheet, and pig.—During 1895-96 the United States exported none of the above-named manufactures to Japan. The following table, however, shows our country to have been one of the principal exporters in this line in 1897:

Countries.	Iron, bar and rod.	Iron, plate and sheet.	Pig iron.
Great Britain United States Germany Belgium	66, 893 145, 278	\$493, 655 622 22, 884 68, 066	\$397, 155 29, 312 38, 383

Iron nails, bolts, and screws.—In 1895, the United States exported to Japan but \$33 worth of iron bolts and screws and \$2,521 worth of iron nails, against which we exported last year iron bolts and screws valued at \$5,262 and iron nails valued at \$463,689. Germany was the largest shipper of nails to Japan in 1896, sending an amount equal to \$469,485, against \$116,160 worth from the United States; but last year, as shown by a preceding table, these two countries changed places, the United States having shipped a large amount, while Germany dropped to less than one-half her former export.

Cotton-spinning machinery.—The United States does not materially help to supply the vast quantity of spinning machinery required in Japan. This field is one in which England seems to have always had a monopoly. Her exports here of such machinery during the last year amounted to \$2,632,509, against \$4,557 worth from

the United States and but little from any other country.

This state of affairs should be looked into carefully by enterprising American manufacturers of machinery, as cotton spinning in Japan is rapidly on the increase, involving a brisk demand for equipment.

Japanese agencies for the purchase of spinning machinery are established in New York. Osaka is the chief cotton spinning and weaving district, and manufactures immense quantities of cotton cloth, not only for home use, but for export to China,

Korea, and Hongkong.

Dynamo electric machinery.—The United States is well ahead in this export and should strive to maintain its lead, as there is no doubt that with the opening up of Japan consequent upon the operation of the new treaties in 1899, the demand for this machinery will be greatly stimulated, as will also be the case with many other foreign inventions and productions.

The following table names the principal countries exporting this machinery and the value exported from each, during the last three years:

Countries.		1896.	1897.
United States Great Britain Germany	86, 854	\$148, 143 131, 306 80, 643	\$341, 154 92, 161 83, 095

Mining machinery.—This is used for the mining of coal, silver, copper, sulphur, and autimony. The imports were:

Countries.	1896.	1897.
Great Britain. United States Germany	12, 533	\$119, 231 31, 250 7, 860

Flour.-Flour is a growing import into this country, and the United States supplies most of it, a very small quantity being shipped from British America and China. The United States more than doubled its export of flour to Japan in 1896; but during the last year, the exports of this article gained only about 17 per cent, in consequence of its enhanced value at home, cheapness being an indispensable condition to ready sale in this country. When the price of flour in the United States again becomes normal, it will no doubt soon be much more extensively exported to this country.

Raw cotton.—Since 1895, British India has gained largely in the exportation of raw cotton to Japan, having more than trebled its shipments in three years, while China

has fallen behind about 50 per cent.

The United States gained more than 80 per cent in 1896 over the preceding year and more than 70 per cent in the year under review. In commenting on the increased import here of American cotton, the annual report of the foreign chamber of commerce at Kobe states that from October to December last, 120,000 bales were contracted for, and that in consequence spinners would, in the near future, be using 40 per cent of American cotton against 12 to 15 per cent in former years. It was also stated in the report that the working of American cotton both reduced the running expenses of the mills, and increased their capacity to turn out the finished product.

A British Foreign Office report (annual series 2189) on the trade of Osaka and Hiogo in 1897, has the following additional details, the values being stated in United States currency:

To the English manufacturer, by far the most satisfactory feature in last year's trade was the improvement in the import of metals, machinery, and railway material. The machinery imports in 1897 and 1896, compared, were approximately as follows:

Articles.	1897.	1896.	Remarks.
Spinning and weaving ma-	\$2, 014, 731	\$1, 265, 290	Practically all British.
Electrical, mining, paper- making, printing, sewing, and other machine tools.	1, 299, 35 <b>6</b>	554, 781	British, 56 per cent; United States, 28 per cent; German, 12 per cent; Franch, 2 per cent; other countries, 2 per cent.
Steam vessels	983, 033	399, 053	Practically all British.
Locomotive engines and parts.	515, 849	316, 323	United States, 57 per cent; British, 43 per cent.
Steam boilers, engines, and pumps.	296, 856	291, 990	British, 80 per cent; United States, 16 per cent; other countries, 4 per cent.
Watches and fittings	257, 9 <b>24</b>	316, 323	Swiss, 78 per cent; United States, 13 per cent; German, 6 per cent; French, 2 per cent; British, 1 per cent.
Clocks and parts	116, 796	126, 529	German, 51 per cent; United States, 38 per cent; French, 8 per cent; other countries, 3 per cent.
Parts of railway and other carriages.	87, 597	535, 315	British, 80 per cent; United States, 14 per cent; German, 6 per cent.
Implements for farmers and mechanics.	535, 315	43, 799	British, 75 per cent; United States, 25 per cent.
All other machinery	214, 126	214, 126	Comprising chiefly: Munitions of war, \$82,730; scientific and musical instruments, \$58,398; fowling pieces and parts, \$28,332; field glasses, etc., \$4,866, etc.
Total	5, 839, 800	3, 581, 744	

While the figures are approximately correct for this port, the percentages of the articles imported from the different countries are calculated on the total figures for the goods imported at all the open ports of Japan, figures showing the country of origin for the goods imported at each open port not being available.

Consul Lyon, in the report previously quoted, continues:

Nothing serves better to illustrate the progressive spirit of the Japanese than their great anxiety for the introduction of foreign capital for business purposes. The efforts in this direction by the business classes are strongly supplemented by the vernacular press and by the Japanese chambers of commerce in Kobe and elsewhere.

The foreign and Japanese chambers of commerce lately held an informal joint meeting in relation to this subject, at which time it was plainly pointed out by the foreign chamber that the capital sought, being necessarily timid, required to be properly safeguarded by a more liberal display upon the part of the Government, such as, for instance, the equalization of foreigners with Japanese in regard to the holding of shares in stock companies and in reference to the ownership of land.

Japanese business people are slow, methodical, and cautious in their dealings, and it is characteristic of them to protect themselves at every point. Business must be done carefully with them, as well as with others; their responsibility must be thoroughly investigated, and also their general business reputation. There are mercantile agencies in this country which furnish financial ratings, and some of the representative Japanese houses have branches in one or more of the leading American cities.

The Japanese have no prejudice against American goods or manufactures; on the contrary, their superiority is freely admitted in many lines. As an illustration, there was recently made at Tokyo, by the authorities of the locomotive department, a critical test of English and American locomotives, and it resulted in favor of those made in America. The American locomotives were pronounced superior in all respects, and it was especially noted that they worked more economically. Tests have also been made of American machinery and many other manufactures from our country, and in regard to their quality the results have proved most satisfactory. The chief difficulty in the way of the greater introduction here of American goods lies in the fact that our merchants and manufacturers are not putting forth the same degree of effort for the Japanese markets, as exporters from other foreign countries.

#### KOREA.

The imports in 1897, according to Consul-General Allen, of Seoul, were, in round numbers, \$5,000,000, and the exports (including gold) were \$5,504,600. He says:

Despite the Japan-China war, waged largely on Korean soil, the trade of Korea increased from \$3,000,000 (in round numbers) for 1893 to \$5,000,000 in 1894—the year of the war—and \$6,000,000 in 1895, maintaining this figure for 1896, but jumping to nearly \$11,000,000 in 1897. This increase is accounted for by the fact that during the years of the war and consequent occupation of Korean territory by Japanese troops, the latter spent large amounts of money here, which furnished the Koreans a purchasing medium. Then the scarcity of rice in Japan at a time when the Korean harvests were good, together with the large influx of Chinese merchants after the war and the unprecedented expenditure of money by the Korean Government in 1897 for public works, caused a great increase in trade for last year.

United States trade with Korea is chiefly in kerosene, machinery, flour, provisions, and bousehold and personal articles. The import of American kerosene amounted in 1897 to \$232,386. Of machinery, mostly for the use of the mines and railroads, we imported to the amount of about \$100,000, and the figures for the present year will greatly exceed those for 1897. Of flour, the total import for 1897 was \$24,000. As much flour was imported under the head of provisions and not separately named, the amount so imported will probably cover the import from Japan; so that I regard the above figure as roughly representing the import of American flour alone. Of provisions, household supplies, and small manufactures, the import from the United States may be roughly estimated at \$25,000, with the prospect of a steady increase. I think, therefore, that the total import of goods from the United States to Korea for 1897 must have been at least \$400,000 gold.

Mr. Allen speaks of the growing importance of the ports opened to trade last autumn-Chenampo and Mokpo. A concession for a railroad to connect Seoul and Fusan has been granted to a syndicate of Japanese capitalists. Much of the equipment, it is said, will be purchased in the United States. The railroad from Seoul to Chemulpo is being built by Americans. The constructor of this road is also building trolley electric street railways in the city of Seoul. Americans are operating the principal gold mines of Korea.

The Korean Government has announced its intention to shortly open to foreign trade four new ports, as follows: Sungchin, on the northeast coast near the Russian frontier and in the province of Ham Kyung; Kuhnsan, in the North Culla Province, on the southwest coast, about midway between Chemulpo and Mokpo; Masampo, in the South Kyung Sang Province, on the south coast, near to Fusan; and the northern

capital, Pengyang.

#### PERSIA.

A British Foreign Office report (annual series, No. 2186) gives the value of imports into ports on the Persian Gulf in 1897 as \$14,424,306, and the exports as \$10,497,041. The chief articles of import were cotton goods, \$4,559,424; arms and ammunition, \$885,216; grain and pulse, \$1,388,412; pearls, \$1,446,810; tea, \$494,436; metals, \$239,918; sugar, indigo, spices, dates, and coffee were also important items. India sends the largest proportion of the imports, \$5,635,407, England following with \$4,195,896.

The Statesman's Year-Book, 1898, estimates the value of the total

trade of Persia in 1896-97 as \$36,498,750.

The United States minister resident and consul-general, Mr. Hardy, says:

Of the total foreign trade of Persia, estimated on the basis of returns from the following places, about 27 per cent of the imports come via Bushire, 18 per cent via Lingah (on the Persian Gulf), 15 per cent via Bonder Ahbas, 4½ per cent via

Digitized by GOOGLE

Mohammerch, 1½ per cent via Meshed, 9 per cent from Tabriz, and 18 per cent from Resht. In other words, of the total value of exports and imports, about two-thirds is by way of the Persian Gulf and the remainder through the northern cities of Meshed, Tabriz, and Resht. The foreign trade of Resht is almost exclusively Russian; this is also true to a considerable extent of Meshed and Tabriz.

Mr. Hardy urges the opening of an agency in Teheran as the best and almost the only means of extending American trade. He thinks there would be an opening for petroleum heaters, coal stoves of an inexpensive variety, sewing machines, knitting machines for socks, shoes of a certain make, canned goods, leather, photographs, drugs, clocks and watches, safes, harness, wall paper, stationery, cotton goods, locks, door and window fasteners, air-motor pumps, and carriages. The special needs of the market, he says, must be studied.

#### PHILIPPINE ISLANDS.

The following statistics in regard to the imports and exports of the Philippine Islands have been compiled from official publications of the various countries mentioned. In the first table, in which an effort has been made to show the trade by countries of origin and destination, the figures for 1897 are given, except in the case of France, Germany, Spain, Belgium, India, the Straits Settlements, and Victoria. For these countries, the latest figures available relate to 1896:

Countries.	Imports from Philippines.		Countries.	Imports from Philippines.	
Great Britain	\$6, 223, 426	<b>\$2,063,598</b>	India	\$7,755	\$80, 156
France	1, 990, 297	359, 796	Straits Settlements .	274, 130	236, 001
Germany	223, 720	774, 928	New South Wales	119, 550	176, 858
Belgium	272, 240	45, 660	Victoria	180	178, 370
Spain	4, 434, 261	7, 972, 637 92, 823	United States		94, 597
China		97, 717	Total	19, 317, 736	12, 173, 141
	·		'		

The average value of the trade of the Philippines is greater than indicated in the above table, having suffered in the past few years on account of political conditions. Great Britain imported from the Philippines in 1893 to the value of \$10,607,000, and exported nearly \$1,500,000 more than the shipments in 1897. France imports three times as much as she did in 1893, but her exports have diminished in an even larger proportion, from over \$2,000,000 to \$350,000. China imports more than twice as much, but exports considerably less than in 1893; and United States commerce, which was \$9,314,235 in 1893, fell to \$4,478,337 in 1897. Our trade in the calendar year 1893 was: Imports from Philippines, \$4,099,525; exports to Philippines, \$147,846.

The following statements show the principal articles of import and export:

Principal imports from Philippines.

Countries.	Hemp.	Tobacco.	Cocoanuts and copra.	Sugar.
Great Britain France. Germany Japan	76, 754 166, 600	\$716, 767 86, 451 31, 654 64, 477	\$222, 404 1, 787, 198	\$1, 512, 703

It must not be inferred from the absence of statistics in regard to some of the above articles that there are no imports into the countries mentioned. They are either covered in the general heading, "All other imports," or are classified in some other way.

Principal exports to Philippines.

The chief products of the island are sugar, rice, hemp, coffee (reduced of late years), tobacco, cocoa, bamboo, baskets, hard woods, mangoes, bananas, pineapples, cotton, etc. Gold, coal, copper, lead, and iron are found.

Consul Williams writes from Manila, under date of October 10, 1898, that during the quarter ended September 30, 1898, the declared exports from that consular district to the United States was: Hemp, 4,000 bales, \$57,503.35; hats, 19,803, at 20 cents, \$3,960.60; cigars, 34 cases, \$1,329.92; grass cloth, \$156.41; total, \$62,950.27.

#### SIAM.

A British Foreign Office report (2190, annual series) gives the total value of the imports into the port of Bangkok in 1897 as £2,485,000 (\$12,093,253), and of the exports as £2,203,000 (\$10,720,900). There was a large increase in both imports and exports—the first amounting to 13 per cent—over 1896. The chief articles of import and export are stated below:

Exports.	Va	lue.	Imports.	Val	ne.
Rice	116, 500 84, 800 39, 100	\$11, 600, 263 1, 382, 086 566, 947 412, 679 190, 280 109, 983	Treasure	£874, 300 237, 200 91, 500 75, 600 75, 400 62, 300 68, 800 39, 900 29, 900	\$4, 254, 781 1, 154, 334 445, 285 367, 907 366, 934 303, 183 334, 815 194, 173 145, 508

A large proportion of the trade is with Hongkong and Singapore. The value of the direct trade with Europe in 1897 was: Imports, \$1,373,000; exports, \$1,440,000.

## STRAITS SETTLEMENTS.

Consul-General Pratt, of Singapore, gives the imports in 1897 as \$95,681,799, and the exports as \$83,118,757. The figures for 1896 were: Imports, \$98,395,038; exports, \$85,483,888. The chief articles of export are gambier, gutta-percha, coffee, hides, rattans, sago flour, pepper, tin, tapioca, copra, nutmegs, gums, mother-of-pearl, etc. Imports consist principally of cotton goods, provisions, coal, rice, hardware, and cutlery, handkerchiefs, twist, paper, liquor, flour, petroleum, tobacco, etc.

The value of the imports in the first six months of 1898 was \$47,813,302, and of exports, \$42,596,805. Both imports and exports show an increase,

as compared with the corresponding period of 1897.

Imports from the United States in 1897 were valued at \$1,180,000; flour was valued at \$898,000, petroleum at \$48,000, machinery at \$68,000, and carriages at \$8,900. In the annual report for last year, Mr. Pratt estimated that Great Britain had over 12 per cent of the trade; British possessions, 20 per cent; Dutch India, 17 per cent; the United States, 4 per cent; France, 3.3 per cent; Germany, 2.5 per cent, etc.

# TURKEY IN ASIA.

#### ASIA MINOR.

Consul Jewett, of Sivas, estimates the imports at that place for the fiscal year 1897-98 as \$809,500, and the exports at \$763,000. The imports at Samsoun in 1897 are estimated at \$3,199,400, of which the United States sent \$5,000. Exports were \$4,111,400, of which \$12,700 went to the United States. The feature of the import trade, he says, is the competition of Germany, which is seriously injuring the English exports to Turkey. Cotton goods are generally known as "Manchester goods," but it is interesting to note that unbleached cotton sheetings are universally called "American cloth." One special variety of sheeting has a large sale all over Asia Minor, and the demand is increasing as its superior quality becomes recognized. A British consul reports that \$12,000 worth was sold at Angora last year. Cheap grades of cutlery, lamps, clocks, and some silver plated and enameled ware might find a market.

Consul Madden, of Smyrna, estimates the imports at \$11,257,000, of which cotton goods represented nearly half; petroleum, \$332,000; sugar, \$638,000; woolen goods, \$339,000; lumber, \$248,000; glassware, \$218,000; iron, \$175,000, etc. Germany, says Mr. Madden, is rapidly superseding all other nations in supplying Turkey with manufactured products, except muslins, calicoes, and agricultural implements. She has accomplished this by furnishing "shoddy" goods at ruinous prices, and by giving credits of from four to six months. The United States still leads in plows, harrows, reapers, and binders. Farmers object to our thrashing machine for the reason that it breaks up the straw too much. More American plows have been sold this season than during any preceding Food supplies are mostly produced in the country, except sugar, which comes from Germany, and rice, which is supplied by India. American hog products are prohibited entrance, but the consul thinks many hams find their way in under English brands. On account of an edict by the Sultan forbidding the cutting of timber, there is an opening for petroleum stoves.

 $\mathsf{Digitized}\,\mathsf{by}\,Google$ 

#### SYRIA.

Consul Washington, of Alexandretta, estimates the imports for the fiscal year 1897-98 as \$8,819,750, of which \$4,837,000 came from England, \$411,900 from Frauce, \$297,800 from Italy, \$753,900 from Austria, \$300,000 from Russia, \$245,000 from Belgium, \$185,400 from Germany, and the rest from Turkey and Egypt. The exports were \$4,712,615, of of which \$328,000 went to England, \$1,040,000 to France, \$317,000 to Italy, \$150,000 to Germany, \$1,552,000 to Turkey, \$463,000 to the United States, etc.

Imports at Beirut, says Consul Ravndal, during the fiscal year 1897-98, were valued at \$8,258,300, and exports at \$5,164,200. Of the imports, \$3,041,500 was in Manchester goods, \$392,000 in other cottons, \$488,000 in silks, \$330,000 in woolens, etc. The exports consisted mainly of raw silk (\$709,000), wool (\$179,000), soap, tobacco, cotton goods, etc. Imports from the United States were valued at \$47,540, and exports at \$106,732. Sewing machines figured for \$43,000

among the imports.

Mr. Ravndal says that although local trade with the United States is growing, outside of sewing machines, the imports are not of great importance. This is not due to a lack of appreciation of the excellence of American goods, but to the higher prices, which are the result of the cost of transportation and transshipment. With direct steamship facilities, many lines of American products would find ready sale in Syria; especially hardware, tools, pumps, corn shellers, fanning mills, cotton prints and drillings, canned provisions, furniture, watches and clocks, leather and saddlery, drugs and paints, kerosene and flour.

Palestine.—A British Foreign Office report (annual series, No. 2050) gives the imports in 1897 as \$1,492,215, an increase of \$243,325 over the preceding year. The exports were \$1,505,208, a decrease of \$311,456 from the figures for 1896. The share of the various coun-

tries in the import trade is stated as follows:

Countries.	1897.	1896.	1893.
Great Britain	Per et.	Per ct.	
		10.8 22.7	10.5 22.6
Egypt Turkey	15. 2	17. 3	17.1

Italy	5.0	5.7	6.8
America	1.2	. 83	.83
	1		1

# United States Consul Merrill, of Jerusalem, says:

A German merchant here imports American tools, but buys them in Hamburg, whence they are reshipped to Jaffa. At present, the amount is limited, but he assures me that they are favorably received and that there is an increasing demand for them. He mentions especially machinists', carpenters', and blacksmiths' tools.

He also imports some carriage wheels ready made.

This leads me to remark upon a branch of business which ought to be in American hands, namely, carriages and carriage supplies. Ten years ago, there were very few carriages in Jerusalem, but now that the Jaffa road is in good condition, and the road to Jericho, the Dead Sea, and the Jordan is opened up—also that to Bethlehem and Hebron—there are scores of carriages, and the number is constantly increasing. A carriage road has recently been constructed from Jerusalem to the top of the Mount of Olives (for the German Emperor, it is said), and in a few years one will be built between Jerusalem and Nablous; hence it is reasonable to suppose that the demand for carriages will increase. The carriages should be made in the United States—at least the wheels and running parts—and shipped in that form. Some good workmen

Digitized by GOOGLE

should be sent here to establish repair shops, since all work of that kind is done in a rude manner by natives.

No one can say that direct communication with New York by steam would at first be a paying investment, but it would be welcomed by the merchants of this country; and the representatives of the United States in this part of the world see reasons convincing them that the outcome of such an undertaking would, in time, be highly satisfactory.

Only a few years ago, there was no direct communication by steam between the United States and Egypt; but the North German Lloyd Company made the experiment, and now the steamers between New York and Alexandria are, during the season of travel, frequently crowded with passengers. The success of the enterprise showed that a certain field had previously been unoccupied which was ready to reward

anyone who should venture to work it.

Our vice-consul here, who was born in New England, but has lived nearly all his life in this country, is of the opinion that if a purely American store were established in Jerusalem, it would very soon create a considerable demand for American goods. He believes that such a store would be a profitable investment. It should be stocked with a variety of goods, and reference always had to the actual and possible needs of the people. Such canned goods as corned beef, ham, tongue, salmon, lobsters, oysters, milk, sweet corn, lard, berries, and such other fruits as do not grow in Palestine; also furniture in pieces to be put together here, window frames, blinds, doors, etc., ought to be sent here from the United States. This is, of course, only a partial list. Personal testimony is to the effect that English prepared ham, tongue, fruits, and some other goods that come in cans, are not so good as similar articles that are prepared in America. So much fruit is preserved in this country for winter use, that the introduction of American glass jars would be a be a large demand. Fifty to sixty thousand bottles of beer are imported into Jerusalem every year, and a large part of this trade might be in American hands. One merchant ventured to import a small invoice of American-made ladies' shoes; they were taken at once, and there is a call for more. English ladies who tried them were highly pleased with them.

In every case when I introduce the subject of American goods to the merchants of this city, it is admitted that in general they are superior to those of the same kinds from other countries, and the merchants say they would like to keep them for sale, but the expense of getting them to Jerusalem is the great barrier. The consulis not the person to remove this barrier; this should be done by action taken in the United States. Occasional visits to this coast of American steamers, and a central store with branches, as suggested, seems to be one way of securing to the United States its share of the trade of this country.

# AUSTRALASIA AND POLYNESIA.

According to United States Treasury returns, the commerce of the United States with Australasia and Polynesia in the last ten calendar years has been: IMPORTS.

# AUSTRALASIA.

## NEW SOUTH WALES.

Consul Bell, of Sydney, says that the trade, in 1897, with foreign (i.e., non-British) countries was \$48,471,488, of which \$21,141,953 was with the United States. In 1896, the total trade was \$43,378,820, and the share of the United States was \$18,412,888. Manufactured goods were imported in 1897 as follows: United States, \$6,986,000; Germany, \$4,068,000; France, \$97,900.

Official statistics of New South Wales show that the total imports in 1897 were \$105,818,879 and the exports \$115,584,592. Of the imports, \$36,776,141 came from Great Britain, \$46,718,000 from other Australasian colonies, \$5,425,845 from Germany and possessions, \$9,183,086 from the United States, and \$1,172,827 from France, including New Caledonia and Tahiti. The exports were divided as follows: Great Britain, \$42,474,812; Australasian colonies, \$39,778,771; United States, \$11,981,323; France and possessions, \$8,175,720; Germany and possessions, \$4,355,518.

## NEW ZEALAND.

Consul Dillingham, of Auckland, sends figures showing that the total imports in 1897 were \$39,200,743 and the exports \$48,747,696. Of the imports, \$26,124,759 came from the United Kingdom, \$3,056,376 from the United States, and all the rest (with the exception of about \$3,000,000) from British possessions. The exports were: To United Kingdon, \$39,750,171; to United States, \$1,825,405; to China, \$32,961; to other foreign (non British) ports, \$57,297; islands in the Pacific, \$571,157, and the balance to other colonies of Australasia. The total imports in 1896 were \$33,500,000 and the exports \$45,900,000. Apparel figured for \$1,761,673 in the imports, cotton goods for \$2,014,731, drapery for \$1,674,076, woolens for \$1,425,885, hardware and ironmongery for \$1,109,562, steel and steel rails for \$1,790,872, iron rails and railway bolts for \$437,985, and iron—pig, wrought, wire, etc.—for \$2,574,379.

The increase in imports into Auckland from the United States, says the consul, was \$112,167 over 1896. It is gratifying to note that the

trade between the United States and New Zealand is steadily growing, the imports covering many new articles.

# QUEENSLAND.

The consular agent at Brisbanc, Mr. Weatherill, reports the imports in 1897 as \$26,420,000, of which \$12,175,983 came from the United Kingdom, \$11,304,880 from Australasia, \$1,289,623 from the United States, etc. The exports were valued at \$44,241,352, over a third going to the United Kingdom and \$27,471,393 to other colonies of Australasia. The United States received but \$8,569. Large quantities of Queensland produce are sent via New South Wales, and appear as exports from that colony. Among the principal imports were: Manufactures of metal, including machinery, hardware, etc., \$4,185,190; cotton, woolen, silk, and linen goods, \$2,413,784; clothing, hats, etc., \$1,481,648; acids, chemicals, drugs, etc., \$875,970; paper, stationery, printing materials, \$856,504; spirits, wine and beer, \$1,158,227; oils, \$496,383; flour and grain, \$2,788,505. The exports comprise gold, in dust and bars, \$12,497,172; preserved meat, \$5,002,762; wool, greasy, \$7,659,871; wool, clean, \$4,545,300; live stock, \$4,058,671.

## SOUTH AUSTRALIA.

According to official statistics, the imports in 1896 (the latest year for which they have been issued) were: South Australia proper, \$34,844,140; northern territory, \$496,383; exports, \$36,956,200 and \$725,000, respectively. Of the imports into South Australia proper, 31 per cent came from the United Kingdom, 55.08 per cent from the Australasian colonies, and 13.91 per cent from other countries. The proportion of the total exports to the United Kingdom was 30.11 per cent; to Australasian colonies, 46.85 per cent; and to other countries, 23.04 per cent. Among the principal articles of import figure refined sugar, \$1,182,560; haberdashery, \$1,221,490; apparel, \$851,638; machinery and tools, \$837,305; coal and coke, \$1,177,693; wool, \$2,905,300; silver ore and silver lead, \$8,270,050; cotton and linen piece goods, \$1,382,086; woolen piece goods, \$783,500; iron, bar, sheet, etc., \$1,133,895; drugs, \$530,500.

#### TASMANIA.

Consul Webster, of Hobart, gives the imports in 1897 as \$6,652,000, of which \$1,934,000 came from the United Kingdom, \$4,524,000 from Australasian colonies, \$68,000 from Germany, and \$93,654 from America. The imports from the Australasian colonies mainly consist of British, American, and other goods, transshipped there or purchased from colonial importers. American goods are chiefly obtained through the latter source. Tobacco and kerosene alone were imported to the value of \$236,000, and as these items, says Mr. Webster, would be almost exclusively American, it is clear that the statistics give no idea of the country of origin.

The exports for 1897 amounted to \$8,379,000, and consisted mostly of fruit, wool, and minerals. The mining industry is developing, though the districts where it is carried on are difficult of access. American manufactures, especially agricultural machinery, tools, bicycles, and

shoes, are becoming better known.

#### VICTORIA.

Consul-General Bray, of Melbourne, says that both imports and exports showed a substantial increase in 1897, the trade amounting to \$75,200,000 for imports and \$81,400,000 for exports, against \$70,800,000 and \$69,000,000 for 1896. The trade with the principal countries was as follows:

Countries.	Imports.	Exports.
Australasian colonies.		\$24, 182, C00 46, 520, 000
Great Britain. United States Germany	2, 874, 000	2, 088, 000 2, 340, 000
Unitaly India China	1, 865, 000	1, 873, 000 245, 000
France Belgium	695, 000	3, 604, 000 966, 000

The chief articles of import were coal, \$1,112,000; cotton goods, \$4,475,000; books, \$822,000; apparel and slops, \$830,000; bags and sacks, \$832,000; gold (exclusive of specie), \$10,131,000; haberdashery, \$1,177,000; hardware and ironmongery, \$730,000; hides and skins, \$1,388,000; hosiery, \$700,000; iron and steel (exclusive of rails, wire netting, etc.), \$2,606,000; machinery (including steam engines and boilers), \$1,024,000; sheep, \$1,157,000; oil of all kinds, \$1,160,000; paper, \$1,318,000; silks, \$1,485,000; spirits, \$1,217,000; sugar and molasses, \$3,823,000; tea, \$1,330,000: timber, \$1,223,000; tobacco, \$988,000; wool, \$9,581,000; woolen goods, \$2,943,000.

The export list comprises butter and cheese, \$4,461,000; wheat, \$1,098,000; leather, \$1,803,000; hay and straw, \$943,000; wool,

\$19,465,000, etc.

The principal articles imported from the United States were bicycles, \$30,000; clocks, \$18,000; barley, \$65,000; hardware and ironmongery \$126,000; iron wire, \$68,000; lamps, \$29,000; agricultural machinery, \$79,000; sewing machines, \$30,000; maizena and corn flour, \$37,000; oil, \$775,000; printing, uncut, \$204,000; timber, \$276,000; tobacco, \$600,000; tools, \$84,000; wooden ware, \$46,000. Wool was exported

to the United States to the value of \$2,042,000.

While the exports to the United States, says Mr. Bray, snow a decrease of \$442,000, due to the bad wool season, the imports have increased \$346,000, with every prospect of a further gain in 1898. The consumption of United States products in Victoria was greater, during 1897, than any previous year since 1890. This improvement in the trade of the two countries is doubtless due to the recovery of the colony from the effects of the collapse of the land boom, and to the renewed activity of American business houses in pushing trade. Representatives of United States manufacturers in Victoria are more numerous and better equipped than of recent years, and splendid results are following their efforts. The geographical position of the Australian colonies must make them large purchasers of our products, and the present volume of trade between the two countries will unquestionably grow to vast dimensions. It is pleasing to note, continues the consul-general, the acceptance by the Victorian railway commissioners of the tender of a Pennsylvania steel company, for the supply of rails, to the value of \$500,000. Other American tenders for the supply of engines, etc., have also been successful against keen foreign competition.

#### WESTERN AUSTRALIA.

The imports in 1896, according to official returns, were \$31,599,185, and the exports \$8,029,725. The trade was distributed as follows:

1	Countries.	Imports from.	Exports to.
A	Inited Kingdom	63. 22	30. 83 58. 35
1	Other countries	5. 10	10. 82

In Consular Reports No. 219 (December, 1898) appears an account of the exposition to be held at Coolgardie in March, 1899, under the patronage of the government of Western Australia. A pamphlet accompanying the programme of the exposition, has the following description of the resources of the country:

Gold.—In 1886 the output of gold was 302 ounces, valued at \$5,581. In 1897, the output was 674,993 ounces, valued at \$12,482,445, while the returns for the eight months of this year ending August 31, are 637,069 ounces, worth \$11,781,024. The total output to date is 2,279,689 ounces, or 69 tons 6 cwt. 2 quarters and 25 pounds (avoirdupois) of gold, valued at \$42,156,148. It is estimated that the yield for 1898 will be fully 1,000,000 ounces.

Western Australia has attained the leading position as a gold producer in Australia.

Western Australia has attained the leading position as a gold producer in Australasia, and, as her great auriferous resources are further developed and better goldsaving methods are adopted, she anticipates taking the first place among the gold-

producing countries of the world.

Coal.—Large areas of carboniferous country have been discovered in the colony, the principal of which, up to the present, are situated about 25 miles east of Bunbury and connected by a branch line with the Southwestern Railway. The coal has

been tested, with highly satisfactory results.

Timber.—There are over 20,000,000 acres of forest land in Western Australia, or between 30,000 and 40,000 square miles—the area of Great Britain. The matured and marketable timber in these forests is estimated to be from 60,000,000 to 70,000,000 loads, valued at \$583,980,000. Jarrah, the paving wood par excellence, occupies an area of some 8,000,000 acres, while karri, only second in importance and value,

covers 1,200,000 acres.

Agriculture.-Western Australia contains millions of acres of land suitable for cultivation. The following returns, recently issued by the agricultural department, show the productiveness of the soil: Wheat averaged in 1897, 10.44, barley 13.63, and oats 17.44 bushels to the acre; while potatoes gave 3 tons 15 cwt. to the acre. Some of the farms have been cultivated for many years without any dressing beyond ordinary stable manure. The area of arable land for 1897 was 65.67 per cent greater than that of 1896, while the expansion of agriculture this year promises a still larger percentage over 1897. The rainfall for 100 miles or more from the coast is sufficiently acres. ciently large and constant to insure successful agricultural operations; so that for thirty years or more, while the seasons have varied, a failure has not been known. Large areas of land may be cleared at a comparatively small cost; but in most instances, as in some of the lands of the southwest division, the heavier the cost of clearing, the more valuable the soil.

# POLYNESIA.

# HAWAII.

According to a British Foreign Office report (No. 2205, annual series) the value of imports into Hawaii in the first nine months of 1898, was \$7,360,580, against \$5,980,257 in the corresponding period of 1897. Imports from the United States are increasing. The United States Treasury returns of trade with Hawaii, in the calendar year 1898, are: Imports from Hawaii, \$16,587,317; exports to Hawaii, \$6,827,848.

The following tables of trade in 1896 and 1897 were taken from official publications of Hawaii:

A British Foreign Office report (No. 2193, annual series) says that the imports into the Hawaiian Islands in 1897 showed an increase in almost every article on the list, especially in provisions, wearing apparel, hardware, agricultural implements, and machinery. There was also an increase in exports, due mainly to an increased output of sugar, of which, according to the customs returns, 232,334 tons were exported, all to the United States, during the year.

Of the imports, the United States contributed 76.94 per cent; Great Britain, Canada, and the Colonies together, 11.85 per cent; and the balance was distributed about equally between Germany, China, Japan, and other countries. Of the exports, 99.62 per cent went to the

United States, and sugar represented 96 per cent of the total.

The report assigns as the reasons why the United States has such a large proportion of the trade (apart from the difference in tarif rates) the adaptability of American goods for the Hawaiian market, the reduced rates of transportation and consequently cheaper prices, the excellent packing of cotton, etc. The following articles are still imported from Europe: Cement, crockery, corrugated iron, oils, paints, bags (though most of these now come from India), tin plates, twine, jute manufactures, fire bricks, and certain kinds of brushes.

The machinery used in the sugar factories is largely of local manufacture, the Honolulu Iron Works being an up to date institution, capable of turning out excellent work. The plows and farm implements, as well as the small locomotives on some of the estates, come almost

invariably from the United States.

Although the soil of the islands is undoubtedly rich and fertile, the demand made upon it by almost continuous harvests without any alternation of crops renders the use of fertilizing agents a necessity. There are two local factories, which manufacture 10,000 tons per annum. One is of considerable size, making its own sulphuric acid and pro-

ducing an excellent fertilizer. There is also a large importation of

fertilizers from the United States and Europe.

Coal for steamer use to the extent of 70,000 tons was imported, principally from British Columbia, Australia, and New Zealand. About 700 tons of hard coal for smithy purposes came from the United States.

In cotton goods, the United States already has a large proportion of the trade, and a monopoly of boots and shoes, felt hats, and the better

class of straw hats.

The sugar industry of the islands prospered in 1897, all the plantations paying dividends. Intelligent systems of cultivation are in vogue. The sugar planters have formed themselves into an association and have established a laboratory and experimental station, from which much benefit has been derived. The crop for the year was the largest yet reached—251,126 tons of 2,000 pounds. The 1897–98 crop will probably be under this, owing to the dry weather last year. There are 56 sugar plantations on the islands.

The cultivation of coffee is extending, but up to the present, no large estates have been opened, the area planted being made up of a number of small holdings. It is difficult to obtain exact information as to the area under cultivation, but the following figures are approximately

correct:

	Acres.
Trees over 3 years old	550
Trees from 1 to 3 years old	1.050
Trees under 1 year old	400
Total	2.000

In addition, there is a fair area of what is known as wild coffee—that is, coffee which has not been scientifically planted or subjected to the more approved methods of pruning, etc., but which has been allowed to grow almost entirely wild.

The export of coffee in 1897 was 337,158 pounds, or nearly double

that of 1896.

#### FIJI.

According to British official figures, imports into Fiji in 1897 were valued at \$1,210,532 and exports at \$2,101,646, sugar representing \$1,575,919 of the exports. Over 90 per cent of the total trade of the colony was transacted with New South Wales, New Zealand, and Victoria. Many of the importations, however, are of German origin, and there has been an increase in prints, glassware, sewing machines, and enameled ware.

Imports in 1896 were valued at \$1,178,500 and exports at \$2,105,700.

# NEW CALEDONIA.

Imports in 1897, says Commercial Agent Wolff, of Nouméa, were \$1,675,000 and exports \$1,359,000. The figures for 1896 were \$1,774,000 and \$1,109,000, respectively. The imports from the United States (chiefly through houses at London, Bordeaux, and Sydney) comprise lumber, petroleum, tobacco, sewing machines, agricultural implements (which find a steady market), canned goods, wheat, and machinery. Owing to the want of direct communication, the United States has participated little in the trade of New Caledonia. Many of our products, especially machinery, are appreciated.

The exports consist of nickel ore, which is sent to France, Germany, and England; chrome ore, to England, and thence to the United States; cobalt, to Germany and England; mother of pearl shells, to France; pearls, to European markets; copra, to France, Germany, and Australia; coffee, to France. Indigo, vanilla, and maize are also exported.

# SAMOA.

Consul-General Osborn, of Apia, says that the total value of the imports in 1897 was \$329,630, of which nearly half (\$157,695) came from Australian colonies. The United States sent goods to the value of \$53,415; Great Britain, \$13,322; Germany, \$83,562; Fiji, \$3,757; Tonga, \$12,642; other South Sea islands, \$4,518; New Britain, \$580, and Hawaii, \$884. The exports amounted to \$239,198, of which \$125,380 went to Europe, \$54,305 to the United States, \$51,473 to Australasia, \$14,223 to Hawaii, etc. Of copra (native product), 10,691,520 pounds were exported from Samoa. The consul-general adds that a large percentage of the goods from Australia are of American origin. It is stated that all goods originating east of California are sent to the Atlantic seaboard, thence to Sydney, and from Sydney to Apia, and are delivered there cheaper than they can be obtained directly from San Francisco.

# SOCIETY ISLANDS.

Vice-Consul Hart, of Tahiti, writes:

As usual, the United States heads the list of both imports and exports in 1897, showing that the bulk of the trade is still ours, notwithstanding the strong efforts made by the Australian colonies, more particularly New Zealand, to secure a share; efforts which have met with a certain measure of success, owing to the excellent transportation facilities provided by the latter countries. Australian trade with this colony is next to that of the United States, and the two combined absorb more than one-half of the entire trade. The United States has so long enjoyed the benefits of the trade of these islands, that our merchants have become apathetic and do not show the energy displayed by our British and colonial cousins, who more than ten years ago subsidized a steamship line, to which in a great measure the increased trade is to be attributed. There can be no doubt that the proposed communication offered by the Polynesian Steamship Company between San Francisco, Honolulu, and Tahiti, will give the necessary impetus to our trade.

The imports from foreign countries in 1896, according to French official returns, were \$482,500; the exports \$617,600. The trade with France was: Imports into France (special commerce), \$6,716; exports from France, \$103,622.

# EUROPE.

United States Treasury returns give the trade of the United States with Europe, in the last ten calendar years, as follows:

# IMPORTS.

# TRADE AND INDUSTRY OF PRINCIPAL COUNTRIES.

A report from the British consul at Stockholm (No. 467, miscellaneous series) quotes the following statements from a Swedish statistical publication:

The average annual value of the commerce (imports and exports taken together) of the four greatest trading countries of the world for the periods 1881-1885, 1886-1890, and 1891-1895 was:

Countries.	1881-	1885.	1886–1890.		
Great Britain and Ireland	£573, 888, 888 306, 611, 111 318, 222, 222 302, 333, 338	\$2, 792, 830, 273 1, 492, 122, 972 1, 548, 628, 443 1, 471, 305, 165	£568, 222, 222 325, 888, 888 306, 000, 000 301, 611, 111	\$2, 765, 253, 443 1, 585, 939, 273 1, 489, 149, 000 1, 467, 790, 472	
Countrie	òs.		1891-	1895.	
Great Britain and Ireland Germany France. United States.		• • • • • • • • • • • • • • • • • • • •	£589, 166, 666 352, 777, 777 296, 833, 333 347, 333, 333	\$2, 867, 179, 580 1, 716, 793, 051 1, 444, 539, 415 1, 690, 297, 560	

rates Thus, during this period, Great Britain's trade has increased by slightly more than 2½ per cent, that of Germany and the United States each by 15 per cent, while the trade of France has steadily declined. The volume of trade has, of course, increased to a much greater degree than is indicated by these figures; but, owing to the almost universal fall in the prices of commodities, the increase in value of exports and imports has been less than might have been expected.

The most striking fact brought into relief by the statistics is the rapidity of Germany's industrial development since the Franco-Prussian war. The sudden increase many's industrial development since the Franco-Prussian war. The studen increase of her great coal, iron, and iron-ore producing industries, the extension of her rail-way system, and the quick growth of her foreign trade have placed her in a much stronger position than she occupied previous to 1870. The standing of Great Britain (considered apart from her colonies) has retrograded in relation to the other great nations within the last twenty-five years. In nearly every important department of industry, her proportional share has much diminished. As to shipping only is the early supremacy fully maintained. Her position, however, when considered in conjunction with her colonies is very different as will be seen, when considered in conjunction with her colonies is very different as will be seen. junction with her colonies, is very different, as will be seen from the following table, which shows the average annual imports and exports of British colonies and dependencies and the United States of America for the period 1890-1895, and the imports and exports for 1895 of Germany and France:

Countries.	Imp	orts.	Exp	orts.	Total.
Germany France United States British colonies	£203, 516, 666 148, 794, 444 161, 350, 000		£163, 866, 666 134, 950, 000 167, 544, 444	\$797, 457, 130 656, 734, 175 815, 355, 037	£367, 383, 332 \$1, 787, 870, 976 283, 744, 444 1, 380, 842, 337 328, 894, 444 1, 600, 564, 812
and dependen- cies	192, 488, 888	936, 747, 173	211, 671, 111	1, 030, 535, 447	404, 249, 999 1, 967, 282, 620

Thus the sum of the imports and exports of the British colonies and dependencies exceeds the total amount of the exports and imports of the United States by nearly one-fourth, that of Germany by about one-tenth, and that of France by more than one-third.

The production of iron ore is given as follows:

Countries.	1871-1875.	1881-1885.	1886-1890.	1891-1895.
Great Britain and Ireland Germany United States France Spain Other countries	5, 262, 000 4, 532, 000 2, 651, 000 613, 00)	Tons. 17, 154, 000 8, 557, 000 8, 516, 000 3, 018, 000 4, 119, 000 4, 578, 000	Tons. 14, 250, 000 10, 183, 000 12, 988, 000 2, 850, 000 5, 766, 000 5, 467, 000 51, 504, 000	Tons. 12, 249, 000 11, 679, 000 14, 288, 000 3, 651, 000 5, 346, 000 9, 068, 000

Thus, during the period between 1871-1875 and 1891-1895, the annual production of iron ore in Great Britain is estimated to have decreased from 16,087,000 tons to 12,249,000 tons. Germany's output more than doubled within the same period and that of Spain increased nearly ninefold. The production of the United States has more than tripled. Sweden has also taken an important position as an iron-ore producing country. It is noticeable that Great Britain's production has decreased absolutely, and not merely relatively as regards that of other countries.

The average annual output of pig iron is stated in the following table:

Countries.	1871-1875.	1881~1885.	1886–1890.	1891-1895.
Great Britain and Ireland	1, 946, 000 1, 265, 000 2, 284, 000	Tons. 8, 227, 000 8, 411, 000 1, 899, 000 4, 370, 000 2, 780, 000	Tons. 7, 883, 000 4, 215, 000 1, 693, 000 7, 193, 000 3, 298, 000	Tons. 7, 361, 000 5, 082, 000 2, 006, 000 8, 263, 000 4, 038, 000

During this period, it appears that Great Britain's share in the world's production of pig iron has shrunk from 46.3 per cent to 27.5 per cent; while, on the other hand, the United States increased its proportion from 16.1 per cent to 30.9 per cent. The rapid development of Germany in this line of production is also striking.

The production of coal was:

Countries.	1871-1875.	1881-1885.	1886-1890.	1891-1895.
Great Britain and Ireland	44, 680, 000 15, 862, 000 45, 283, 000	Tons. 161, 470, 000 68, 630, 000 20, 250, 000 94, 130, 000 52, 175, 000	Ton v. 172, 335, 000 81, 228, 000 22, 838, 000 125, 214, 000 63, 445, 000	Tons. 184, 819, 000 97, 008, 000 26, 658, 000 160, 832, 000 78, 832, 000
Total	266, 770, 000	396, 665, 000	465, 060, 000	548, 149, 000

During the early period, it appears that Great Britain supplied 47 per cent of the world's output of coal, but at the present time, only 31 per cent; Germany advanced from 17 to 18 per cent, and the United States from 17 to nearly 30 per cent. Figures as to the consumption of raw cotton show that since 1870, Great Britain's

consumption has increased by one-fourth, and that of the rest of Europe and of the United States has doubled. As to the production of wheat, the United States contributes one-fifth, the British colonies about one eighth, and Germany less than one-twentieth of the total production. The United States and the British colonies together produce somewhat more than half of the total annual output of gold and nearly half of the annual output of silver in the world. The cattle in British colonies together produce somewhat more than half of the total annual output of gold and nearly half of the annual output of silver in the world. The cattle in British colonies together these of the United States the colonies together the second that the second the second that the second the second that the second the second that the second the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the second that the se nies and dependencies outnumber nearly twice those of the United States; the number of horses in the British colonies and dependencies is about one-third that in the United States and one-fourth more than that of Germany; and the number of sheep in the British colonies is nearly four times that of the United States and eleven times as large as that of Germany.

The percentage of increase of population within the last ten years is stated as follows: British colonies and dependencies, 12 per cent; United States, 24 per cent; Russia, 11 per cent; Germany, 11.95 per cent; France, 0.78 per cent; Great Britain and Ireland, 8.77 per cent.

The development of Russia and the opening of Siberia will probably mean a rapid increase of population in those regions in the near future.

## AUSTRIA-HUNGARY.

The imports in 1897, says Consul-General Hurst, of Vienna, were valued at \$302,103,900 (exclusive of specie), and the exports at \$306,497,600. Imports for 1896 were \$282,314,900, and exports \$309,-601,500. The trade with the chief countries in 1897 was:

	·	
Countries.		Exports.
United States. Belgium France. Germany Great Britain	\$22, 301, 900 5, 394, 500 9, 641, 100 107, 924, 200 27, 667, 000	\$6, 721, 400 2, 644, 200 11, 012, 200 148, 481, 700 28, 108, 900 10, 509, 900
Great Britain	27, 667, 000	

# The imports and exports of some of the principal classes were:

# IMPORTS.

Articles.	1896.	1897.

The trade for the first six months of 1898 was: Imports, \$175,112,500; exports, \$149,034,200.

Consul Hossfeld, of Trieste, in a report published in Consular Reports No. 216 (September, 1898), says:

That the manufacturing industry of Austria-Hungary (or rather that of Austria, for Hungary has always been solely an agricultural State) is losing ground, there can be no doubt. There are many causes which combine to bring about this result.

Among the principal ones, may be mentioned the following:

(1) The conservatism of the people. While the English and German manufacturers are largely cosmopolitan, the Austrian remains provincial and strongly conservative. Innovations are still painful to him. He accordingly fails to keep abreast of the times, and is distanced in the race for industrial and commercial supremacy.

(2) High railroad rates. This is a mountainous country; the construction, as well as the operation, of railroads is expensive, and rates are correspondingly high. Austria's manufacturing centers, lying in the very heart of the European continent, are favorably situated with respect to inland traffic, but are at a great disadvantage in export trade. Moreover, while Austria furnishes Germany with a great deal of through traffic, and thus lowers the general cost of transportation in the latter country, she receives very little through freight from Germany in return.

(3) There is a lack of mechanical skill in the southern and eastern portions of the

Monarchy, and, as such skill is largely the product of evolution, manufacturers have

found that they can not afford to train a race to the manual arts.

(4) High taxes. It is said that industrial enterprises are taxed more heavily in Austria than in Germany; and, as capital, like water, always follows the course of least

resistance, it is not strange that movable plants occasionally cross the frontier.

(5) Internal dissensions. Much of the energy of Austria which might be used in the development of her industries and foreign commerce, seems to be consumed in race animosities at home. While in the German Empire we find new industrial and export associations daily springing into life, the people of Austria seem to be absorbed just now in founding German, Slavic, or Italian clubs. Moreover, in the industrial centers of Bohemia, there is constant friction between the German manufacturer and his Slavic workmen, greatly impairing the efficiency of both.

There is now a movement on foot in Hungary to bring about her "economic eman-

cipation" from Austria. It must be remembered that since the "Ausgleich" of 1867 the tariff union of the two halves of the Monarchy rests only upon the precarious foundation of a treaty. Should the Hungarians refuse to continue the present arrangement, Austria's industries would doubtless sustain a terrible loss, and many now flourishing establishments would be crushed. The agricultural products of Hangary would in a measure have to find a new market, and the industrial interests of the two countries would probably suffer.

# Consul Mahin, of Reichenberg, writes:

Most of the cotton used here comes from the United States. During the six months ending June 30, 1898, the United States sent to Austria three times as much cotton as the country—British India—which sent the next largest quantity. American grain of various kinds (especially maize) is found in all the markets of this American petroleum is also imported to some extent. Formerly, it controlled the market, but with the appearance of Russian petroleum and the eroction of oil refineries in Austria, the importation of American oil has almost entirely ceased.

American lard and bacon are brought here in large and increasing quantities. Fully nine-tenths of the imports in this line are from the United States. During the six months under review, 19,112,700 pounds of lard were imported into Austria, of which 18,608,200 were from the United States. Of bacon, 2,211,000 pounds were imported, of which the United States furnished 2,100,000 pounds. American lard and bacon have practically a monopoly of this market; with well directed efforts, the same could be said in future of other American food products—notably butter, the native article being of poor quality and high price. American oatmeal affords a case in point. By systematic and judicious efforts to introduce it, coupled with persistent advertising in the local press, all the grocery stores in this section have been induced to handle American oatmeal, and it has become as popular a breakfast dish here as in almost any community in the United States.

Consul Donzelmann, of Prague, says that there are great possibilities for the introduction into Bohemia of corn, meal, corn starch, oats, shoes, rubber boots, heating stoves (self-feeders), furniture, agricultural implements, green and dried fruits, salt and canned meats, leather, photographs, organs, electric machinery, watches, clocks, and type-The market, however, must be studied. Our exporters can not expect to get their share of the business by relying upon commission houses. Personal representation is necessary.

Consul Hossfeld, of Trieste, in his annual report, says that Bosnian prunes were formerly exported to the United States, but California

prunes have driven them from the market. In fact, California prunes

are now imported into Austria.

Imports from the United States to Trieste have increased 350 per cent in three years—from 1.8 per cent of the total imports in 1894 to 8.2 per cent in 1897.

#### BELGIUM.

Consul Roosevelt, of Brussels, says that the commerce between Belgium and foreign countries for the year 1897 exceeded that of the pre-The importations and exportations comceding year by 3 per cent. bined for 1897 were \$1,144,123,300, of which \$596,524,000 were imports and \$547,598,000 were exports.

According to the Board of Trade Journal for March, 1899, the imports into Belgium in 1898 were valued at \$375,625,059 (in the special trade) and the exports at \$349,325,546. Both imports and exports

show an increase of about 7 per cent as compared with 1897.

The trade with the principal countries in 1897 is given by Consul-General Lincoln, of Antwerp, as follows:

Countries.	Imports.	Exports.
France England Gormany Netherlands United States	Dollars. 57, 240, 498 42, 569, 158 45, 136, 587 29, 856, 371 44, 718, 110	Dollars. 57, 501, 986 58, 302, 441 70, 108, 192 35, 528, 083 11, 664, 146

Speaking of imports into Belgium from the United States, Consul-General Lincoln says:

The quantity of starch and nonedible farinaceous substances exported from our country into Belgium during the first six months of 1898 was 5,206,253 pounds, as against 2,608,462 pounds in the first six months of 1897 and 169,973 pounds in the first six months of 1896.

The importations of certain kinds of timber from the United States increased in a notable manner during the first six months of 1898. Thus the imports of oak and walnut boards for the first six months of 1898 were 1,830 cubic feet, as against 961 feet in 1897. The increase in the import of sawed oak and walnut for the same period of time was also notable, the figures in 1898 being 104,546 cubic feet, as against 66,190 cubic feet in 1897.

Belgian wheat imports for the first six months of 1898 from the United States were 292,582,000 pounds, as against 143,584,570 pounds for the corresponding period in 1897. The amount of the import of rye for the first six months of 1898 was 86,198,510 pounds, as against 25,368,797 pounds for the first six months of 1897 and 16,868,496 pounds for 1896, a very notable increase. The import of indian corn for the same period of 1898 was 317,655,600 pounds, against 207,004,143 pounds in 1897.

The import of wheat flour for the first six months of 1898 was 2,555,018 pounds,

against 882,803 pounds for the corresponding period of 1897.

The import figures for malt were 1,024,711 pounds during the first six months of 1898, against 495,007 pounds in 1897, a notable increase.

The import of vegetable oils was 11,992,413 pounds, against 8,431,256 pounds for the first six months of 1897.

One of the most notable increases in imports from the United States is lard, the importation of which for the first six months of 1898 amounted to 18,543,477 pounds, against 7,568,431 pounds in the corresponding half year of 1897. The increase in the importation of other animal substances, such as fish and fat other than lard, is also noteworthy, the import being twice as large in the first six months of 1898 as in 1897, the figures being 3,379,468 pounds for 1898 and 1,551,694 pounds for 1897.

The import of raw cotton rose from 29,627,447 pounds during the first six months of 1897 to 49,405,242 pounds in 1898. The import of raw silk for 1898 also shows a considerable increase over 1897, the figures for the first six months being 38,434

pounds, against 12,189 pounds in 1897.

The import of steel in bars, sheets, or wires, not classified, was 153,049 pounds for 1898, against 6,067 pounds in 1897. The import of raw copper and nickel was 8,601,132 pounds in 1898, as against 5,248,471 pounds in 1897. The import of old iron likewise rose from 34,171 pounds in the first six months of 1897 to 468,153 pounds in the corresponding period of 1898. In wrought iron (not classified), the import for the first six months of 1898 was 38,172 pounds, against 14,124 pounds for the corresponding period of 1897. One of the most noteworthy developments in Belgian imports from the United States was in pig lead, the import of which in the first six months of 1896 amounted to 1,590,365 pounds, against 3,833 pounds for the corresponding period of 1897. sponding period of 1897.

The imports of canned fish, tobacco, wood for dyeing purposes, smoked ham, tongne, and lard show notable increases, while the item of oleaginous grain substances rose from 609,461 pounds for the period under discussion in 1897, to 5,816,616

pounds in 1898.

# Consul Morris, of Ghent, says:

During the past six months, a marked tendency has appeared to discuss the development of Belgium as a maritime and colonizing nation and the expansion of its influence in Africa and Asia. On account of the intensity of its industrial production and the importance of its export trade, the population of Belgium exercises more influence abroad, in proportion, than any other similarly neutral nation. Naturally enough, with this capacity to produce, there exist also aspirations for acquisition and development. Not only must Belgium secure a market for its production. ucts, but it must also provide for the ever-increasing surplus of its children. The Kongo Free State is destined to develop as a result of these conditions; a colony in China may be another result.

The establishment of possessions beyond the sea involves the ownership of a merchant marine, and a merchant marine means a navy to protect it. Belgium, the fourth or fifth economic power of the world, does not possess 100,000 tous of deepsea shipping. Of the arrivals at Belgian ports in 1897, the Belgian flag did not count for 10 per cent. The matter is being agitated, and it is probable that the next few years will see marked expansion of Belgium in this direction.

#### BULGARIA.

The Revue du Commerce Extérieur, Paris, September 19, 1898, says that the foreign commerce of Bulgaria for 1897, as given by official statistics, is valued at \$27,750,456, divided as follows: Imports, \$16,210,888; exports, \$11,539,568. As regards imports, there is an increase of \$1,440,544 over those of 1896. On the other hand, the exports have suffered during the same period a diminution to the extent of \$9,447,247. The failure of the harvest in 1897 brought about this result, the exports from Bulgaria being chiefly agricultural.

The imports of merchandise by articles are given as follows:

Articles.	Value.	Articles.	Value.
Food products, animal.  Cereals, rice, etc Fruits and vegetables Colonial products. Wine, beer, and liquors Preserves and sweetmeats Fate and waste of animals Kuel Chemical products. Dyestuffs, paints, and varnishes Rosins mineral oils, and glues Oils, grease, wax, etc Drugs and medicines Perfumes	287, 154 139, 125 1, 038, 743 150, 630 141, 654 84, 466 145, 395 130, 456 255, 950 509, 332 640, 107	Stones, crockery, glass.  Metals and products  Woods and their industries. Paper and its manufactures Hides and leather. Textiles of silk, wool, and cotton. Rubber, gutta-percha Machinery, tools, etc. Hardware, zinc, toys. Books, articles of plastic art. Live animals Wagons Articles not specified.	\$534, 178 1, 833, 447 538, 851 381, 449 953, 833 6, 191, 211 80, 081 833, 686 121, 012 39, 850 43, 896 62, 024 490, 765

#### IMPORTATIONS BY COUNTRIES.

Countries.	Value.	Countries.	Value.
England Austrin-Hungary Germany Turkey Russia France Italy Belgium Roumania	4, 171, 572 2, 050, 366 1, 831, 284 812, 340 795, 083 600, 039 456, 966	Servia Switzerland Greece United States Sweden and Norway Netherlands Countries not specified Total	\$209, 589 180, 706 90, 341 63, 405 14, 416 10, 829 28, 632

The above table gives England the first place in the commerce of importation. Statistics during the last four years show that imports from Austria-Hungary have diminished \$2,603,845.

France ranks first in importations of silk, eggs of silkworms, morocco leather, prepared skins (goat and kid), toilet waters, wine in bottles, hydraulic lime, tiles, earthnuts, cochineal, almonds, and preserved fish.

# DENMARK.

The total trade of Denmark in 1897, says Vice-Consul Blom, of Copenhagen, was valued at \$194,836,000, against \$179,024,000 in 1896, \$169,376,000 in 1895, and \$164,016,000 in 1894. It is evident that the gain is not due to accident, but to the efforts of all interested in developing the resources of the country. New direct steamship lines have been established, not only to neighboring countries-Norway, Russia, Germany, and England—but even to distant parts of the world—to the United States and the far East. Of the trade in 1897, \$108,272,000 represent imports and \$86,564,000 exports; of the latter, about twothirds was in farmers' products. American corn was imported to the value of \$7,128,000; iron and iron goods represented \$6,513,000; woolen goods, \$4,464,000; lumber and wood, \$4,766,000; leather goods, \$2,071,000; coal, \$6,003,000, etc. Bacon was exported to the value of \$15,000,000; butter, \$31,984,000; eggs, \$3,515,000; grain, \$2,202,000; horses, \$3,493,000; cattle, \$3,875,000, etc. During the first six months of 1898, there was an increase in the imports of breadstuffs, coffee, cotton and woolen goods, fertilizers, iron and steel goods, oil cake, petroleum, and sugar.

The trade of the United States with Denmark, says Mr. Blom, is very large. It is, unfortunately, impossible to give exact figures, as many goods are sent via Hamburg, Bremen, Hull, London, etc., and are credited to those ports. Imports from the United States are increasing fast.

## FRANCE.

Consul Skinner, of Marseilles, says that the special trade in 1898 was: Imports, \$834,955,635; exports, \$676,122,231. The trade was divided as follows:

Articles.	Importations.	Exporta- tions.
Food products Materials for industry Manufactured objects Postal parcels	\$284, 006, 834 429, 864, 268 121, 084, 533	127, 163, 261 177, 340, 716 831, 546, 401 40, 071, 853
	gitized by <b>G</b> C	

The imports in the general commerce (i. e., including goods in transit) in 1897, according to Consul-General Gowdy, of Paris, were \$991,634,000, or \$40,337,000 more than in 1896. The exports amounted to \$926,979,000, an excess of \$40,337,000 over the preceding year. The total trade was \$107,694,000 above the average for the fifteen years'

period prior to 1897.

In the special trade of 1897, the imports were valued at \$763,508,000 and the exports at \$694,414,000. The United States is third on the list of imports into France in the general commerce, with \$159,456,000,

list of imports into France in the general commerce, with \$159,456,000, being preceded by England with \$405,415,000 and by Belgium with \$180,995,000. In the special commerce, the United States comes fourth on the list, being preceded by the countries above named and Germany.

The Bulletin de la Société de Géographie Commerciale, Paris (Vol.

The Bulletin de la Société de Géographie Commerciale, Paris (Vol. XIX), in a résumé of the commercial progress of France in thirty years, says:

Since 1869, the postal traffic has nearly tripled; the telegraphic net is almost nine times greater; the tonnage of the railroads has doubled; the number of travelers has tripled; the receipts of the railroads, which were \$135,328,000,\* have increased more than \$96,500,000; interior navigation has doubled; the production and consumption of coal has increased from \$4,053,000 to \$7,334,000. The production of cast iron has advanced 33 per cent. The discounts at the Bank of France have risen from \$1,279,204,000 to \$1,663,853,000. Personal property has increased immensely. Deposits in the savings banks, which in 1869 were \$144,750,000, exceed \$572,000,000. The number of account books (8,000,000) was never so large. The deposit of funds in banks and societies of credit exceeds \$289,500,000. France since the war has been able to pay \$6,176,000,000 for the public debt and donations; \$4,825,000,000 for the army, navy, and colonies; \$386,000,000 for public instruction, and \$965,000,000 for public works. This does not include the expenditures of private companies. The \$2,316,000,000 which the war of 1870 and the commune of 1871 cost, have been paid. No country has given such marvelous proofs of activity and of progress, notwith-standing the heavy taxes.

Consul Covert, of Lyons, says that American goods are popular in France. Merchants say they are packed better than those received from other countries. Care should be taken, however, to mark the country of origin on goods shipped to France, as otherwise they are likely to be held at the frontier. Goods coming through another country are subject to a warehouse tax. Direct shipments from America to France would cause a substantial increase in the volume of

exports, and would avoid many difficulties.

Fruit is transported from the Australias to London in six weeks, but it takes seven weeks to carry pork from Cleveland, Ohio, to Lyons. The first voyage is about four times as long as the second. The fruit is carried in cool chambers and sold at Covent Garden. California oranges, peaches, apples, plums, and perhaps melons would find hosts of buyers. They ought to reach Lyons in twelve or fifteen days, and would be in good condition, if stored in cool chambers with a temperature not more than 2° or 3° above freezing. Silk buyers arrive in Lyons from New York in eight days. If fruits and meats could be transported in that time, there would soon be a steady demand for them. The same applies to Spain and Italy. Mr. Covert continues:

Shooks for silk boxes and stave wood for wine and liquor barrels would find a good market in Lyons. A number of establishments are engaged all the year round manufacturing boxes for packing textiles.

manufacturing boxes for packing textiles.

At the recent agricultural fair held in Lyons, the American visitor felt quite at home. Excepting the wine presses—capacity from a half bushel of grapes to tous, prices ranging from \$8 up to \$1,000—almost every implement bore an American name. The churns, cultivators, hayrakes, mowers and reapers, counshellers, sulky

<sup>\*</sup>The values, stated in the original in france, are here expressed in the equivalents in United States currency.

rakes, steel tedders, plows, thrashers, binders, and other implements were nearly all of American pattern. They were generally manufactured in France and were noticeably less neat and artistic than the American make. I heard farmers congratulate themselves on possessing some implement actually manufactured in the United States, purchased through an English house.

People over here prefer articles made in the United States to those of other countries. American inventive skill is well known, and is expected to maintain its reputation by keeping some new and useful contrivance always before the world. Our manufactures are known to be so superior in finish, in smooth and easy working,

that Europeans willingly accord them the palm of superiority.

# Consul Tourgée, of Bordeaux, writes:

The decided increase in the importation of dried apples and pears should call the attention of the shippers of these commodities to the necessity of keeping this market well supplied with information in regard to the trade. This consulate was overrun during last autumn and early winter with applications for the addresses of shippers of dried fruits in the United States. I found it very difficult, from the resources at my command, to answer these inquiries. In a general way, this difficulty exists in regard to all lines of trade. At one time, whou a change in the French law left an opportunity during a brief interval to import flour on peculiarly advantageous terms, I had perhaps a hundred applications for the addresses of parties who might be relied upon to ship flour promptly in order to take advantage of this opportunity. There was not in this consulate the address of, a single commission merchant or exporter of flour in the United States. I might just as well have undertaken to reply to inquiries regarding any particular traffic in the planet Jupiter. It is so with almost all other branches of trade. Except lawyers, it is impossible to refer a foreign inquirier to a man pursuing any line of business in the different cities of the United States. There are at least a half dozen legal directories furnished this consulate; why not directories of other lines of business as well? Indeed, I would suggest to the exporting associations of the United States that instead of making the consuls answer an impossible mass of absurd detail questions, in regard to the traffic of his district, they would be accomplishing much more for the export trade of the United States, if they furnished the consuls of Europe with a ready method of answering inquiries in regard to American exporters.

#### GERMANY.

Official statistics for 1898 (quantities only being stated) show that the imports of Germany were 427,180,754 metric tons and the exports 300,862,280 metric tons. The imports show an increase, as compared with the same period of 1897, of 25,557,586 tons and the exports an increase of 20,662,794 tons. Exports in the first nine months of 1898 were valued at \$652,596,000.

In his annual review of the trade of Germany for 1897, Consul-General Mason, of Frankfort,\* says:

The year 1897 in Germany has been characterized as "another twelvemonth during which every chimney in the Fatherland was smoking, every wheel turning." The industrial and commercial activity which began so notably in 1894 was continued throughout the year, and the statistics of foreign commerce show a notable increase in both the bulk and aggregate values of imports and exports over those of the last preceding or, indeed, any previous, year. The foreign trade of the five years ending with 1897 is thus synopsised, it being premised that the values here given are those supplied by the imperial bureau of statistics, and are not actual, but estimated officially by taking as a basis the average market value of each class of merchandise during the year under consideration:

Year.	Imports.	Exports.	Total.
1893	1, 010, 574, 418 1, 088, 480, 624	\$772, 205, 756 726, 252, 240 814, 977, 450 874, 287, 702 906, 335, 178	\$1, 756, 114, 416 1, 746, 209, 194 1, 825, 551, 868 1, 962, 768, 326 2, 056, 563, 236
Increase in 1897 over 1896	61, 747, 434	<b>32, 047, 4</b> 76	93, 794, 910

There is thus shown a net gain of more than \$93,000,000 over the aggregate foreign trade of 1896, which, in respect to both imports and exports, had surpassed the record of every previous year. The excess of imports over exports amounts to \$243,892,880, which would be considered in the United States a somewhat serious adverse "balance of trade." But it must be remembered that the relative situations of Germany and the United States in regard to supplies of food products and certain raw materials of manufacture are essentially different. Germany, with 52,000,000 inhabitants, is unable, under present conditions, to raise either meats or breadstuffs in sufficient quantity to supply the wants of her people, and must import heavily, not only food, but several staple raw materials.

Statistics of Germany's trade by countries are unfortunately, for some reason, always greatly delayed; the Imperial Statistical Yearbook for 1897, which has just

appeared, contains only the geographical tables for the foreign commerce of 1896.

From these, it appears that Great Britain holds the first and the United States the third place in both the import and export trade of Germany. Of the forty six countries named in this exhibit, the five leading ones are as follows: Great Britain contributed to the imports of Germany in 1896, 14.2 per cent; Russia came second, with 13.9 per cent; the United States third, with 12.8 per cent; then Austria-Hungary, with 12.7 per cent; and France fifth, with 5.1 per cent of the whole amount.

In respect to German exports, Great Britain took 19 per cent of the whole; Austria, 12.7 per cent; the United States, 10.2 per cent.

It is interesting to note, year by year, the fluctuations in imports of the several classes of products which form the staple of American export trade to Germany, and which show, in the aggregate, to what extent this country is dependent upon our own for not only cereals and meats, but for some of the essential raw materials of its manufactures. The record of 1897 shows the following notable items:

Articles.	Quantity.	Value.	Articles.	Quantity.	Value.
D	Metric tons.		g .	Metric tons.	
Raw cotton		\$40, 475, 600	Copper	50, 420	\$12, 114, 200
Raw tobacco		1, 856, 400	Resin and turpentine.	94, 952	2, 023, 000
Hides and skins		4, 771, 400	Pig iron	18,034	100, 400
Lumber and timber	186, 854	3, 546, 200	Fruits:	· 1	•
Leats	27, 276	5, 117, 000	Fresh	10, 337	618, 800
Buckwheat	16,008	404, 600	Dried		2, 284, 800
Barley	118, 928	3, 165, 400	Cotton-seed oil		999, 600
)ats	96, 009	2, 213, 400	Oil cake		4, 331, 600
orn		12, 709, 200	Machinery		1, 190, 000
Wheat	207, 261	7, 544, 600	Furniture	361	119, 000
Кую	142, 997	3, 308, 200	Bicycles		523, 600
Flour		190, 400	Butter	1, 122	380, 800
etroleum	837, 659	10, 234, 000	Dutter	4,144	200, 000

Among the more noticeable fluctuations in the above list may be cited the import of indian corn, which, in 1896, was 553,981 tons; so that the receipts of 1897 showed an increase in one year of 422,053 tons, or 76 per cent. Wheat, on the contrary, declined from 266,875 tons in 1896 to 207,261 tons in 1897; but it is to be remarked that, notwithstanding this difference in quantity, the wheat imports of 1897 were valued at \$7,544.600, against \$8,139,600 for those of 1896, a difference of only \$595,000. The greatly increased import of corn shows, therefore, that the people of Germany are beginning to realize the economy of corn as a breadstuff. While they have not yet, to any great extent, accepted corn bread as a substitute for the heavy, sour, black loaf made from a mixture of rye and the lowest quality of wheat, corn meal is now used to a greater degree than hitherto for mixing with wheat and rye, and it is, moreover, in constantly increasing demand as food for cattle and horses and for distillation.

Another surprising item is the import of 204 tons of American caviar, against 221 tons of the same product from Russia, although here, as well as in other European countries, all caviar is popularly supposed to be of Russian origin and paid for accordingly. 1 \$975,800. Finally, there were imported last year 5,918 American horses, valued at

Among the steadily growing exports from the United States to Germany, is leather. Notwithstanding the rapid rate at which German tanneries are being equipped with American machinery, and the eagerness with which the more advanced tanners are learning and adopting American methods, especially relating to the chrome process, there is a large and steady export from this district to the United States of calf and goat skins, which come back as shoe and glove leather. Frankfort is the principal mart of this trade, and there are now in this city eleven firms which import and deal almost exclusively in American leather, which finds a ready sale among the shoe and leather-goods manufacturers of Germany, Austria, and Switzerland.

#### GENERAL PROSPERITY OF GERMAN INDUSTRIES.

Notwithstanding all complaints of increased competition abroad, the stringency of hostile tariffs, and the growing cost of living at home, the year under consideration was one of uniform prosperity and activity in all fields of German industry. The consumption of coal, which forms an accurate index to manufacturing and commercial activity, increased at the usual rate, the product of German mines being, in 1895, 30,100,000 tons; in 1896, 33,000,000 tons; and in 1897, 35,700,000 tons. Besides the domestic supply, Germany imported 6,072,028 tons of coal in 1897, against 5,476,752 tons in 1896 and 5,117,356 tons in 1895; as well as 8,111,075 tons of brown coal and 435,160 tons of coke, which helped to meet the steadily increasing demand for fuel. In the district of Dortmund, the number of men employed in coal and iron works increased from 159,915 in 1896 to 172,768 in 1897. Fifty-two of the principal works and collieries paid dividends averaging 10.68 per cent in 1897, against 7.59

per cent during the fiscal year 1894-95.

Other great industries, like the manufacture of coal-tar dyes and chemicals, paid dividends ranging from 18 to 28 per cent, and the electrical manufacturing companies have worked literally night and day through months of phenomenal activity. It is stated upon direct authority that the General Electrical Company, of Berlin, entered upon the present year with orders on its books amounting to 95,000,000 marks (\$22,610,000), against 65,000,000 marks (\$15,470,000) on the first day of 1897; and that the great Schilckert Company, of Nuremberg, had in June, 1897, orders on hand aggregating 96,000,000 marks (\$22,848,000)—more than double those of the same date in 1896. American experts, whose testimony is entitled to credence, have repeatedly stated, after careful examination of the subject, that the prices obtained for electrical machinery of all kinds in Germany are nearly or quite double those which prevail in the United States; and it is both natural and gratifying that the opportunity thus offered has been utilized, at least to some extent, by American machinists.

The year 1896 saw organized in Germany 182 industrial companies with 268,580,000 marks (\$63,922,040) of capital, while 1897 brought forth 254 new companies, whose aggregate capital reached 380,470,000 marks (\$90,551,860). Of these, not less than 11 were electrical companies, with total capital of 96,310,000 marks (\$22,207,780). Nearly all these investments were taken at home. The Germany of to-day has become a country wealthy enough to invest its own money, wherever it can see a

fair prospect of a profitable return.

The phenomenal industrial development of Germany during the past twenty years has been the combined result of a national policy, under which the skill and enterprise of manufacturers and merchants have been directed, encouraged, and sustained by every resource of the Imperial and State governments. From the Chancellor of the Empire down to the lumblest tutor in a commercial or technical school, Germany has been organized, educated, trained, and devoted to the task of becoming an industrial nation in the broadest, highest sense, and in marketing its surplus products among the nations of the earth. The ablest judgment, the profoundest learning, and the most consummate technical skill have been brought to the study and perfection of every detail in the entire system, and the result has thus far justified every effort and fulfilled all reasonable expectation.

There are, however, not wanting in this country economists who think that they recognize on the horizon the rising of a cloud of ominous portent. As an incident and condition of Germany's perfect organization and rapid industrial growth, its leading productive interests have been syndicated to an extent probably unknown in any other country. The remarkable efficiency of these syndicates, in promoting exports of manufactured products, has been largely due to the power which they exercise in maintaining the home price of any given class of merchandise at such profitable figures as to enable the same manufacturer to sell for export at whatever

discount may be necessary to secure the contract.

From the reports of several chambers of commerce in Western Germany, there have come recently signs of impending revolt on the part of the German public against being further compelled to pay the cost of establishing and maintaining markets abroad. It is also pointed out that one result of the system—the object of which was to retain in the Fatherland by very effective means the work of manufacture, and thus give the largest and most lucrative employment to labor—has been to defeat this end by promoting the export of German raw and partially finished materials, to be worked up to completed manufactures in Belgium, France, and Switzerland. It is, in other words, asserted by the complainants that the syndicates have become too efficient, too consummate in management and potent in the control of vast resources, and that the interests of the general public are thereby made to suffer.

There is perhaps nothing new or surprising in all this, nor is it apparent that any protest or complaint will avail to change the policy of the Government, or to restrain

the efforts of the syndicates to extend their foreign trade, so long as results like those garnered in 1897 can be pointed to as the fruit and vindication of the present system of protection and development.

The report for 1898 of the Hamburg Chamber of Commerce (see advance sheets of Consular Reports No. 366, March 6, 1899) says that European industry may be prepared for the fact that in many articles which have hitherto been imported the United States will become a sharp competitor, especially in the iron and steel industries. The reason for the strength of the American industry, the report says, is found in the capacity for production on a large scale of certain commodities, in comparison with which the German facilities, with only a few exceptions, are far inferior.

As to the inspection of foreign meats the report adds that injustice has been done the American product, as not one case of trichinæ poisoning from the consumption of American pork has occurred in Germany since the importation was again allowed. The danger of the San Jose scale, continues the report, was exaggerated, and much damage thereby

done to trade.

# GREECE.

According to the Annales du Commerce Exterieur, Paris, No. XII, imports into Greece in 1897 were estimated at \$22,156,000 and the exports at \$15,575,000. Consular Agent Harris, of Eibenstock, sends the following details in regard to the trade for the first eight months of 1898:

	Imperts.	Exports.
First 8 months of 1898.		_

Consul McGiuley, of Athens, gives tables showing how the trade was divided in 1896:

Countr es	Imports	Exports	Countries	Imports	Exports
Engiand Turkey Be.g.om Russia Austria Hungary France Italy	3 343 000 538 000 5 615 000 2 645 000 1 728 000	\$3 568 000 1 665 000 1 643 000 1 493 000 1 363 000 1 276 000 778 000	Holland Germany Egypt United States Rommania Other countries	978 ((0)	\$661, 000 657, 000 548, 000 525, 000 160, 000 62, 000

Mr. McGinley reports an improvement in trade. Although official statistics for 1897 have not yet been issued, there was unquestionably a large increase in imports during the year, over 1896. Referring to the table of trade by countries, it will be seen, says the consul, that six countries furnished more of the imports than did the United States; England sent seven times as much and Russia more than six times as much. The United States should have a larger share of the trade. American machinery and goods are much sought for in Greece, and many of our products reach the consumer through England and other countries. Sewing machines and watches from the United States are for sale in Athens. Canadian cheese is imported, and Mr. McGinley thinks the United States should compete in this line. American bicycles, windmills, and various kinds of machinery and tools can find a ready market; only the best, however, should be sent.

A report from the consular agent at Piræus, Mr. Sourmely, on the advisability of establishing direct communication with Eastern Mediterranean ports (published in Consular Reports No. 218, November,

1898), says:

Pircus is the chief Hellenic port for imports. Nearly 65 per cent of the goods ported into Greece pass through the Pircus custom-house. The transportation of imported into Greece pass through the Piræus custom-house. these goods is effected by the weekly service of the following regular steamship lines (which enjoy, through conventions with the Greek Government, sundry privilines (which enjoy, through conventions with the creek government, sundry privi-leges and reductions of port dues, etc.): 4 Italian steamers, 4 Austrian steamers, 2 French steamers, 2 German steamers, 2 Russian steamers, 2 Egyptian steamers, 1 English steamer (Johnston Line). The following give fortnightly service: 1 English steamer (Prince Line), 1 Dutch steamer, 1 Danish steamer. That is, there are about 74 regular arrivals from abroad monthly, besides the numerous irregular

Greece imports nearly all manufactured goods. England sends machinery, iron-mongery, steel articles, chemicals, crystal, glass and earthen ware, groceries, coal, raw cotton (chiefly New Orleans), colonial produce of all sorts, potted and tinned goods, oils, paints and varnishes, stationery, cloth, watches, clocks, etc.; from Belgium come hides (chiefly of Buenos Ayres origin), skins, window glass, arms, bar and sheet iron, machinery, ironmongery, and hardware; from France come the renowned specialties of Paris and Lyons, machinery, ironmongery, cloth, and some colonial produce; from Germany and Austria come chemicals, stationery, machinery, hardware, and imitations of nearly all English and French articles and specialties; Italy

sends sulphur and a limited amount of manufactured goods; from Russia come corn, dried fish, butter, caviar, and cattle; from Turkey and the Danube are imported corn and other agricultural produce, and from Egypt, raw cotton.

Most of these articles are produced or manufactured under favorable circumstances and at low cost in the United States, as is proven by the numerous American exports that come via London, Liverpool, etc., where the wholesale stores offer to Greek and Levantine merchants the advantage of quick execution of small orders, and also of liberal credit terms. It is therefore evident that an American steamship line, trading regularly between the United States and Greek ports, would immensely assist American manufacturers and producers in supplanting the middlemen and gradually opening important outlets in these markets. The English, German, and they scan steamship lines began with monthly (and by no means regular) voyages; but they scon organized regular weekly service at Pireus and other Levantine ports, and have found that it pays them well. The German line is now sending here two steamers per week. It may therefore be presumed that, with intelligent study, combined action, and perseverance on the part of American manufacturers and producers, assisted by a well-organized steamship line, the time will soon come when American articles will be freely imported into these important consuming markets, and the American maritime flag will secure its due share of the freights, both of the import and the export trade.

#### ITALY.

Italian official returns show that the imports for the first eleven months of 1898 were \$234,500,000, and the exports \$197,800,000. The imports in 1897 were \$230,000,000, and the exports \$210,800,000, divided as follows:

Articles.		Exports.
Raw material for industries.  Worked-up material  Manufactured products  Food stuffs	\$90, 689, 909 47, 470, 647 49, 080, 556 42, 841, 503	\$37, 533, 482 67, 222, 711 42, 594, 656 63, 543, 918

There was a large increase over the previous year in the import of raw and partly worked material for the use of the national factories. Coal showed an increase of 178,000 tons; raw hides, timber, dyeing and tanning materials, and minerals also showed notable gains. There was a decrease in imports of raw cotton, silk cocoons, scrap iron, etc.

Consul Cramer, of Florence, says that, although it is impossible to

Consul Cramer, of Florence, says that, although it is impossible to give statistics of imports from the United States into that district, it is fair to say that each year shows an increase in the quantity and variety imported. Illuminating oil, tobacco, brandy, canned fruits, meats and vegetables, bicycles, pumps, machines, clocks, watches, locks, leather, chemicals, typewriters, agricultural implements, railroad cars, hardware, musical instruments, etc., of United States origin are sold in Florence. Cotton cloth of American manufacture is not yet on the market, and its introduction might be profitable.

Consul Caughy, of Messina, after speaking of the uselessness of catalogues as a means of advertising, says that United States exporters should learn from the example of an English bicycle vender, who took passage with 150 wheels on one of the Liverpool boats, which stops a couple of days at each of the principal Mediterranean ports. The agent would take one of his wheels ashore at each place, visit the dealers, invite them aboard, and display his stock. When he reached Messina, he had sold for cash over 100 of various grades, and in that city he sold 11. He intends to adopt the same methods on a trip to South America.

Consul Jarvis, of Milan, also referring to the importance of personal representation in business, instances the visit to that city of an agent of a Chicago camera firm. He could speak only English, says the consul, but he had American energy, and soon every camera dealer in the city had samples of the article in his windows. It is too early to judge of sales, continues Mr. Jarvis, as the visit was recent, but that is the correct way to introduce goods.

The following advice to British manufacturers seeking Italian trade, published in a recent Blue Book, will be of interest to United States exporters as well:

Figures give a clear indication of the loss to British trade in manufactured articles during the last ten years. Part of the loss in total value of imports is due to the general fall in prices during the period, and part to the development of Italian industries having diminished the demand for foreign manufactures; but these causes of decrease in total values do not account for the increase of German trade at the expense of British, which is noticeable in many directions, and particularly in some

<sup>&</sup>lt;sup>1</sup>See Competition with British Trade, Consular Reports, No. 219, December, 1898. (Advance Sheets No. 260, October 29, 1898.)

of the more important classes of worked iron and steel and chemicals. Other causes must be sought, and certainly exist, though apparently they are of so complex a nature that there is some risk of error in attempting to define them on broad, general lines. As the result of careful inquiries, I would venture to suggest that the following are among the more important factors favoring German competition: Zeal in seeking orders; readiness to conform to the wishes of customers; offering quotations in Italian currency, the seller taking the risk of exchange; quoting for delivery at the place of consumption, all charges, including duty, paid; systematic inquiry concerning the commercial standing of all likely buyers, so that credits are given with fair security; rapidity and certainty in date of delivery; and, finally, lowness of quotations.

England was probably the first country to appreciate and manufacture good agricultural machines, and the deserved reputation of English agriculturists was such that enterprising foreign landowners naturally looked, in the first instance, to England to supply them with agricultural machinery. Today, however, with the important exception of portable engines and steam thrashers, England has practically lost the trade in such machinery. Reaping and mowing machines and hay rakes are almost universally of American manufacture, while plows, drills, and other small machines are generally of German or Swedish origin. And the reason of the change is not far to seek. In England, horses are strong and can drag heavy machines, solidity being specially appreciated, and weight, within certain limits, being immaterial. On the Continent, speaking generally, horses are smaller than in England, and weight is a very important condition, while real finish is not fully appreciated and lowness of prime cost is all important. American, German, and Swedish agricultural machinery may not always be of as good material or as well finished as English; but it satisfies ordinary foreign requirements in the more important conditions of weight and price, and consequently, it drives English rivals out of the market.

Machine tools constitute another class of exports in which British manufacturers appear to be losing ground, through similar and avoidable causes. I recently had the opportunity of visiting one of the most important and successful mechanical works in Italy, and noting the country of origin of the very large collection of tools of all kinds. I was disappointed on observing the comparatively small number of tools of English make in the shop, and further at the fact that a considerable number of the English tools bore the name of commission houses, and not those of well-known makers. In the opinion of the manager, English tools are generally made according to old models, while more improvements are found in the machines offered by other countries, and the very best tools of the more complicated types are now being offered from the United States and are necessarily accepted, in spite

of their comparatively high price.

## MALTA.

The imports of dutiable articles in 1897, says Consul Grout, of Malta, were \$4,404,000, of which \$732,000 came from the United Kingdom, \$1,320,000 from Russia, \$1,026,900 from Italy, and lesser amounts from other countries. Grain is the chief import, \$1,208,000 worth having been entered during the year, mostly from Russia. In manufactured grain products, France led and Great Britain followed. All the preserved beef and mutton is credited to Great Britain, although probably the larger part came originally from the United States. With direct communication, the United States would soon supply a large proportion of the trade.

The exports for 1897 are not stated. In 1896, they were given at \$212,600, and the imports at \$4,338,000.

#### NETHERLANDS.

The imports in 1897 were estimated, in the publication by the British Board of Trade already referred to, as \$682,911.000, and the exports as \$599,820,000. The imports in 1896 were stated at \$657,242,000, and the exports at \$537,755.000. The percentage of the trade with the leading countries was:

Countries.	Imports.	Exports.	Countries.	Imports.	Exporta.
Prussia Great Britain Belgium Dutch Rast Indics	15. 6 10. 7	21. 7 12. 2	Russia	10. 2 1. 5	0. 4 3. 5 1. 7 1. 4

Consul Listoe, of Rotterdam, gives the following list of some of the principal imports from the United States into the Netherlands in 1897:

Articles.	Quantity.	Articles.	Quantity.	
W heat	885, 845, 700 153, 541, 500 7, 107, 600 20, 136, 800 79, 974, 000	Petroleum. Other oils. Lard. Tolsacco Meat Dried fruits Seed.	Pounda. 844, 915, 000 84, 028, 000 60, 853, 500 34, 499, 700 25, 368, 300 18, 430, 400 27, 180, 600	

The importation of American machinery and hardware, Mr. Listoe says, is increasing, and many dealers seem to be anxious to handle them. American tools, he believes, are bought in small quantities through German houses, which indirect importation makes them higher in price. Many American tools are to be seen in the workshops, and they are easily recognized by their finish. Our self-feeding stoves are coming into general use. If electric light fixtures could be sold at lower prices, the demand would be large. Furniture is not yet introduced to a greater extent than during the previous year, but favorable results may be expected, as some of our manufacturers have begun offering goods on easier terms. "I have noticed," says Mr. Listoe, "that most of the dealers handling American goods here are very reticent about giving information relating to the introduction of our manufactures. I think that most of them are afraid that an expression of opinion on their part might lead to the appointment of agents by competing manufacturers."

# PORTUGAL.

Consul Thieriot, of Lisbon, gives the value of imports from the United States in 1897 (for consumption) as \$4,876,848. The export of products of Portugal to the United States in 1897 was \$662,364. The total imports for the first six months of 1898 were \$26,688,204, and the exports were \$15,346,760. These figures are for the special trade, and exclude specie.

The Moniteur Officiel du Commerce, Paris, June 23, 1898, has the following details of trade in 1897:

The total importation of foreign goods into Portugal, including local consumption, reexportation, and transit, reached in 1897 the sum of 50,630 contos (\$51,680,400), an increase of 1,045 contos (\$1,128,600) over the preceding year. The imports destined for consumption in 1897 may be classified as follows:

Articles.	Value.	
Live animals.  Raw materials for arts and manufactures Thread, textiles, felts, etc Peod preductions. Machines, tools, instruments Manufactured articles. Miscellaneous	14, 757, 938 15, 938, 573 4, 924, 222 5, 318, 160 13, 250, 985 14, 310, 992 1, 879, 553 2, 029, 917 2, 874, 646 8, 104, 622	
Total	40, 425, 937 43, 660, 016	

The importations of precious metals is not comprised in these totals. The principal increase of imports is noted in food productions, live animals, coal, machines, and apparatus destined for manufactures. Of the countries competing for this trade, England has the first rank, Germany the second, Brazil the third, then follow the United States and Spain, with France sixth.

The exports of Portugal for the year 1897 show an increase of 1,280 contos (\$1,382,400) over those of 1896. They were classified as follows:

Articles.		Value.	
Live animals	Milreis. 8, 400, 695 5, 381, 034 1, 628, 836 15, 196, 794 77, 439 1, 634, 471	\$3, 672, 750 5, 811, 516 1, 759, 143 16, 412, 588 83, 635 1, 765, 228	
Total Gold and silver in bar and coin		29, 504, 810 2, 871, 709	

These figures show that the exports are chiefly agricultural. Wines of every quality have the first place; each decaliter (2.2009 gallons) must pay an export duty of 0.0021 cent. Then come raisins, almonds, dried figs, cork, and salt. Since 1892, manufactories of woolen and cotton goods have been established and are prospering.

The following extracts from the British Blue Book, already referred to (see footnote, p. 169), give information in regard to trade conditions in Portugal:

With regard to British imports, there has been an improvement over 1894; but it is the general opinion that, notwithstanding an adverse tariff and other impediments, our trade could possibly be further improved here, though if this is to be done it will be by the personal exertions of competent travelers or agents. It is of little or no use flooding the place with English circulars. Not unfrequently, catalogues are sent to the consulate with the request that they may be kept in case of inquiries being made by importers. These, however, are not in the habit of calling at this office on such business.

In machinery, England holds her own, especially with regard to spinning machinery. This is not so much the case with railway plant, and is probably due in part to the greater pains taken by our foreign competitors in suiting the wishes of the buyers in regard to quality and manner of payment, thus offering an inducement to local agents to represent them in preference to English houses. As an instance, I may mention the following case which came under my notice: Tenders were invited by a railway company for some trucks, and among others there was an offer from an English firm. On sending home information of the want of success in obtaining the order, the agent received the following answer: "If, as you say, French and Belgian firms are lower in price than we are, then we feel confident that in comparison the construction of their material will be of a less solid nature than we offer. These remarks as to being beaten in price by French and Belgian makers have come before us frequently, but generally, we are glad to say, have resulted in our obtaining orders afterwards on account of the unsatisfactory result of buyers purchasing from other quarters."

Now, an agent, being paid on commission, would have much preferred obtaining the order, even if the "material were of a less solid nature" than that then offered, to waiting for years on the off chance of the cheaper goods proving unsatisfactory. Moreover, in the case in point, which occurred four years ago, no such want of satisfaction seems to have arisen.

Much may be done to meet the demand for light goods occasioned by the stringent duties. It should be borne in mind that among the less wealthy classes, in the Porguese towns especially, the love of dress and finery is more conspicuous than in northern countries. The chief idea is to keep pace with the fashion; consequently, stuffs are not required to last longer than a season, and durability is of less importance than first cost.

Even in machinery, the same tendency is observable to a large extent, though the sensible majority of manufacturers prefer the heavy English machine instruments, notwithstanding the added expense in duties, to the lighter and less durable articles imported from other countries.

The market has also to be studied in other ways, which will be better understood by an instance being given. A gentleman wished to obtain from England some lace win-

Digitized by GOOSIC

dow curtains. In the catalogues to which he referred he found all the quotations for curtains with taped edges. Now, the untaped article passes the custom-house at a duty of about 5s. 4d. per kilogram (\$1.21 per 2.2046 pounds), whereas the taped curtain is considered to be "made-up" goods, and, as such, pays three times that sum. The would-be purchaser in this case asked a Nottingham house to supply the curtains without tape, but was met with the condition that he should take a minimum quantity of six pairs of each pattern selected. This instance refers, it is true, to a very small transaction; but with the facilities afforded by the parcels post and the economy resulting from direct communication between the furnisher and the consumer, such small transactions could be brought to sum up a very important total, if details such as that of the taped edges were not a source of difficulty.

Again, some goods, such as passementerie, are not allowed in the customs to be separated from the cards, etc., on which they are wound or folded; it becomes,

therefore, of importance that these should be made as light as possible.

With regard to sewing thread wound upon reels, it is manifest that the lighter the reel, the cheaper will the thread come out. Other instances of the kind will suggest themselves, when once it is remembered that the duty is charged by weight.

The boxes, cases, etc., in which goods are packed also pay duty and are an item to be considered. In a recent instance, a series of packages were ordered to be delivered to a shipping agent, who was instructed to forward all of them in one case. Some of the goods delivered were in small boxes, which were inserted in the case just as they were received, and each of those boxes paid, as manufactured wooden goods, a larger sum in duty than they had originally cost.

#### ROUMANIA.

Minister Rockhill, of Athens, says that the imports from the United States into Roumania in 1897 were valued at \$202,339, against \$140,483 in 1896 and \$90,088 in 1895. The chief items are textiles, woods and articles of, and articles of iron. Although imports from the United States show an increase and seem capable of considerable development (now approximating 0.25 per cent of the total import trade), exports from Roumania to the United States are practically nil.

The total imports in 1897 were \$68,665,000 and the exports \$43,266,000. The figures for 1896 were \$65,219,000 and \$62,543,000, respectively.

The trade was distributed principally as follows:

Countries.	Imports.	Exports.	Countries.	Imports.	Exports.
Austria	27, 82	Per cent. 24.71 2.91 24.39 2.27		2. 30 3. 15	Per cent. 3.48 1.61 3.17 33.88

# The British consular officer at Bucharest says:

The competition between British and German manufacturers of engines and thrashers is becoming more acute year by year, as the Germans seem to have little difficulty in providing a cheap article and one which does its work very well. In harvesting machinery, the American makers hold the market, and as these makers seem to have determined to conform to the requirements and usages of this market in every sense of the word, it is probable that they will succeed in enlarging their trade. The Americans also are gradually but surely getting the trade in binder twine, large quantities of which are sold on this market.

# RUSSIA.

The exports of Russia during 1897, says Consul-General Holloway. of St. Petersburg, amounted to \$362,674,000, an increase of \$18,923,000 as compared with 1896. During the first four months of 1898, exports were valued at \$102,257,000, showing an increase of \$19,042,000 over

the same period of 1897. Cereals represented about half of the value

of the exports in 1897.

Imports in 1897 were valued at \$261,885,000, an increase of \$3,860,000 compared with 1896; and during the first four months of 1898 imports were \$82,962,000, an increase of \$7,094,000 as compared with the corresponding period of the preceding year. Raw and half worked materials were valued, in the import trade of 1897, at \$146,120,000; provisions at \$32,996,000; manufactures at \$81,934,900, and animals at \$883,000. The trade with the principal countries was:

Countries.	Exports.	Imports.	Countries.	Exports.	Imports.
Germany Great Britain Helland France Austria-Hungary	44, 938, 300 32, 797, 200	\$92, 597, 000 52, 576, 800 8, 019, 400 12, 711, 790 9, 937, 900	Italy Belgium Turkey United States China		\$5, 427, 000 12, 894, 000 2, 878, 300 24, 554, 100 7, 092, 000

Exports to the United States increased during 1897, compared with 1896, by \$567,000. Imports from the United States, on the other hand, decreased by \$9,266,300. The chief import from the United States is raw cotton.

Consul Heenan, of Odessa, says that an inquiry instituted in that city, almost from store to store, brought out the fact that a large variety of American machines and implements, for agricultural and other purposes, were on sale. At least three-fourths of the goods, says Mr. Heenan, were sold by German travelers representing Hamburg houses. An American firm has secured the contract to furnish the city of Odessa \$125,000 worth of east-iron water pipe. The competition with foreign as well as Russian firms was keen, but the contract was awarded to a well-known Philadelphia firm, and a portion of the pipes has already been delivered. An interesting item of trade during 1898 was the shipment from Odessa to Vladivostok of a number of harvesters and binders of American manufacture.

The following suggestions as to trade with Russia, by Consul-General Holloway, were published in Advance Sheets No. 325, January 16, 1899 (Consular Reports No. 222, March, 1899):

Russia occupies an area over 8,500,000 square miles, one-sixth of the land of the globe, with a population of 130,000,000 and an annual increase of 2,000,000. This includes 140 different races, 90,000,000 of whom are farmers. Siberia alone contains 250,000 square miles of land similar in all respects to that of Kansas and Nebraska, which is traversed by the great Trans-Siberian Railroad and is being settled by a constant stream of immigrants, who receive Government aid according to their needs and ability to till the soil.

This country certainly constitutes a world large enough to command the attention of the leading manufacturers and exporters of the United States, who are seeking

a market for their surplus.

There is a general desire on the part of Russian merchants and dealers to make connections with American manufacturers, provided this can be done advantageously; but, as a rule, American houses have a general agent in England or Germany, who supervises their business for Europe and appoints subagents for Russia and other countries, and takes three-fourths of the commission. Russian agents object to dealing through an agent in London or Hamburg, and very much prefer to deal directly with the home company. As examples, some years since the Baldwin Locomotive Works and the Worthington Pump Company gave the exclusive agency for their goods in Russia to St. Petersburg agents, who deal directly with the home companies, and now practically control the Russian market for locomotives and steam pumps, their trade amounting to millions every year; while agents for rival companies, who are subject to the orders of agents in England and Germany, are unable to compete with them. What has been accomplished by these companies can be done by others with equally meritorious articles.

Articles of American manufacture, with the exception of portable and traction engines, thrashing machines, and plows, are preferred to those manufactured in England, Belgium, and Germany, our principal competitors. The American thrashers and engines are too light to stand the rough usage such machines are subjected to in Russia. On the other hand, there is a large and increasing trade in all parts of Russia in American harvesting machinery and farming implements, such as binders,

mowers, reapers, hayrakes, etc.

The only plows used in European Russia are those manufactured in Russia and Germany, both giving satisfaction. American plows, however, are very popular in Siberia and in the Amur region, one American firm in Moscow having just placed a \$10,000 cash order to supply that trade. The English formerly held the market, but of recent years they have been undersold by the Russians and Germans, whose plows can be purchased at one-third the price asked for English or American plows and on longer time, their retail price being from 25 to 28 rubles (\$12.87 to \$14.32) for single-furrow, two-wheel plow, and 30 to 38 rubles (\$15.45 to \$19.37) for double-furrow, threewheel plow, which is much less than the price for which American plows can be sold in Russia.

The Germans are constantly studying the Russian market, and manufacture articles in the style and manner they find specially adapted to the wants of Russian While England still furnishes Russia a few thrashers and engines, Germany practically controls the market. It is gratifying, however, to know that the commercial relations between the Russians and the people of the United States were never so friendly or strong as to-day, and they are growing closer each year, by

reason of better acquaintance and largely increased business relations.

Notwithstanding the rapid progress Russia is making in the establishment of manufactories, which are being encouraged by the Government, she is not able to keep pace with the increased demand for iron, locomotives, cars, coast steamers, battle ships, elevators, electrical apparatus and supplies, wood-working machinery, tin plate, agricultural implements, rosin, cotton, rooting slate, leather, scales, heavy ordinance, typewriters, tools, bicycles, sewing machines, hardware, coal and other machinery, and photographic materials, as well as in other lines in which our supremacy is unquestioned. Russia offers such a rich field for investment and profitable trade that our manufacturers should study the market and methods of doing husiness. The Russian railway and manufacturing systems are now in their infancy, and there will be for years a constant demand for car material, railroad machinery, etc.

The underwriters state that the losses by fire in Russia every nine years equal the value of all the buildings in the Empire. While some of the larger cities have a paid fire department, they have no steam fire engines or chemical fire extinguishers, depending upon the old style hand brake engines and taking their supply of water from hogsheads hauled to the fire on four-wheeled wagons. When a fire occurs in a suburb or town where the buildings are of logs, as is frequently found in Russia, the results are disastrous; and it often happens that entire villages are destroyed for the want of adequate protection. Russia offers a market for steam fire engines,

fire extinguishers, hose, etc.

There is also a fine field for the introduction of electric street cars, passenger and freight elevators, improved flouring mills, planing mills to manufacture sashes, doors, flooring, etc., in regular sizes, as well as improved coal and other mining machinery.

Our unprecedented export of merchandise during the past year shows that American manufacturers are studying the science of the export trade. The number of representatives of American firms and corporations that visit Russia is increasing annually.

#### SERVIA.

The Monitour Officiel du Commerce, Paris, December 22, 1898, gives the following figures:

The imports into Servia for the year 1897 are valued at 45,313,824 dinars (\$2,955,568); the exports, at 55,939,981 dinars (\$10,796,416) against 53,385,969 dinars (\$10,303,492) in 1896. The total value of French importations was 78,40,33 francs (\$151,318); the exports from Servia to France, were 312,635 francs (\$60,344). The principal importations are textile products, valued at \$3,605,000; skins, raw and tanned, \$289,500; agricultural and horticultural products, \$424,500. The chief articles of export are fresh rnits, \$3,211,679; animals and animal products, \$4,745,350, of which pork, poultry, and eggs are important factors. In the movement of imports, Austria-Hungary ranks first, with 56.28 per cent; England, Germany, Turkey, America, and France follow in the order of their importance. Austria Hungary holds the same place for the commerce of exportation; a considerable part of the merchandise attributed to Austria-Hungary consists, however, of goods in transit.

#### SPAIN.

In Commercial Relations, 1896-97, the imports of Spain in 1897 were stated at \$122,000,000, against \$124,800,000 in 1896, and the exports at \$142,290,000. The chief classes of import and export were:

	Impo	orts.	Exports.	
Articles.	1896.	1897.	1896.	1897.
Stone, minerals, glassware, and pottery	4, 176, 000 9, 264, 000 12, 032, 000 3, 616, 000 8, 168, 000 6, 784, 000 10, 692, 000	\$10, 575, 000 3, 630, 000 8, 725, 000 14, 520, 000 2, 970, 000 2, 805, 000 6, 495, 000 10, 425, 000 7, 140, 000	\$16, 752, 000 15, 065, 600 3, 264, 000 8, 336, 000 3, 264, 000 6, 336, 000 9, 968, 000 96, 000	\$17, 480, 000 14, 220, 000 8, 675, 000 8, 850, 000 2, 640, 000 6, 510, 000 9, 390, 000 75, 000
and wine	24, 592, 000	20, 820, 000	53, 328, 000	46, 485, 000

The imports of Spain in 1898\* were estimated at about \$92,000,000, and the exports at \$132,000,000.

In the Review for last year, it was stated that the United Kingdom had 23.9 per cent of Spain's foreign trade and France 25.4 per cent. The trade with Cuba represented 10 per cent of the total; with Porto Rico, 4 per cent, and with the Philippines, 3.9 per cent. No other country had over 6 per cent of the trade, the share of the United States being 5.4 per cent.

#### SWEDEN AND NORWAY.

#### SWEDEN.

Consul-General Winslow, of Stockholm, gives the total imports into Sweden in 1897 as \$99,625,000, and the exports, as \$94,600,000. These figures show an increase of about \$4,000,000 in imports and of about \$8,500,000 in exports, as compared with the previous year. The chief articles of import and export are stated as follows:

Articles.	Imports.	Experts.	Articles.	Imports.	Exports.
Provisions Cercals Textiles Dry goods Hides, skins, etc Leather, shoes, etc Lard, grease, and mineral oils.	7, 865, 000 5, 550, 000 14, 500, 000 5, 000, 000	\$15, 975, 000 1, 505, 000 65, 000 2, 000, 000 1, 300, 000 230, 000 600, 000	Lumber Woodenware Minerals (coal) Manufactured minerals Metals Manufactured iron Machinery	11, 500, 000 1, 150, 000 2, 500, 000 5, 150, 000	\$35, 000, 000 7, 500, 000 4, 500, 000 4, 100, 000 9, 000, 000 2, 100, 000 2, 150, 000

Consul Bergh, of Gothenberg, says that the first six months of 1898 show a decrease in the imports of breadstuffs, but the import of indian corn was twice as large as during the same period in 1897. The import of pork, meat, petroleum, cotton, coal, raw wool, and machinery also increased. The import of American pork was the largest on record, amounting to 15,524,800 pounds during the period under review, against 3,652,600 pounds in the first six months of 1897. The import of rails was twice as large as during the period in 1897. Fertilizers also show

<sup>\*</sup> See Advance Sheets No. 372, March 13, 1899.

a substantial increase. The exports of machinery and tools and paper are steadily growing.

Consul General Winslow says:

Sweden has made more progress during the past two years than probably any other country in Europe. That great expanse of timber and iron land in the northern part of Sweden, that was formerly the home of the Laplander and his reindeer, is just being opened up to civilization. It has in times past been thought to be a worthless stretch of territory, but exploration has brought to light some of the fluest mineral land in the world. Immense forests of birch and pine are also to be found experiting the modern's part of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretch of the stretc found awaiting the woodman's ax.

A new railroad is to be constructed from Lulea, over the mountains, into Norway, thus bringing the territory near to the world's market, and giving it speedy communication with the scaports on the North Sea, which are never closed by ice. Labor is

well paid, and it might be said that this land is virgin soil.

Machinery will be needed, iron (manufactured) and steel rails required, and immense quantities of canned goods to feed the workers; American pork, fat and heavy, to take the place of butter; tools to be put in the mechanics hands, and tobacco to keep away the mosquitoes in summer and solace the laborer during the long winter nights. Great things are in store for Sweden during the coming years, and her wants are to be many and varied. Our merchants can find an outlet for almost any product that a new country is liable to require. It is a land that is going to be the Klondike of Europe.

A great mistake our exporters make is in not having the goods sent here properly packed and inspected before shipping. Many articles, such as machinery, bicycles, boots and shoes, and provisions, lose their attractiveness and ready sale on account of their poor appearance on arrival. Many orders are placed from samples, and, to the disappointment of the buyer, the merchandise is frequently some grades below the sample which brought the order. A merchant who has been disappointed in this manner is loath to venture a second time.

Belgium and England have been supplying Sweden with cast-iron pipe, rails, and iron and steel beams suitable for building purposes. In the city of Stockholm, the old houses are fast disappearing, and the modern structures will require a great quantity of these beams.

Sweden has to a great extent been overlooked by our merchants. In a great measure, the American goods come here through German and English houses, thus

making the importations more expensive.

#### NORWAY.

Consul Bordewich, of Christiania, says that the trade of Norway with all countries (including Sweden) in 1897 was: Imports, \$71,275,180; exports, \$45,323,432. The figures for 1896 were: Imports, \$64,918,919; exports, \$39,945,946. The large excess of imports, says Mr. Bordewich, is attributed to the new industries that have been undertaken, increasing the importation of machinery. The chief imports from the United States were: Pork, \$199,670; petroleum, \$763,700; leather and tanned skins, \$531,700; tallow, lard, and margarine, \$376,780; flour, \$108,050; tobacco, \$108,920; wood, raw material and staves, \$101,000. These articles were in the direct trade; a large quantity of American goods comes through England and Germany, and is credited to those countries. Direct imports were about \$200,000 larger in 1897 than in 1896.

The principal articles of export were: Lumber, \$11,400,000; wood pulp, \$4,876,000; products of fisheries, \$13,527,000; matches, \$233,000; wrapping paper, \$1,991,000; condensed milk, \$1,200,000; manufactures of wood, \$883,000, etc. The competition of the United States in the wood pulp industry is attracting attention, and a recent report by the Swedish-Norwegian consul in New York gives a full account of the condition of the industry in this country. One advantage that Norway possesses, says Mr. Bordewich, is in the abundance of water power.

C R-VOL 1-12

#### SWITZERLAND.

Consul-General Du Bois, of St. Gall, gives the total imports in 1897 as \$199,025,000 (against \$191,814,000 in 1896) and the exports as \$133,781,000 (against \$132,803,000 in the preceding year). Imports in the first six months of 1898 were valued at \$96,091,000 and exports at \$66,813,000. The chief articles of import and export in 1897 were:

Articles.	Įmports.	Exports.	Articles.	Imports.	Exports.
Silk	26, 110, 000 12, 580, 000 11, 560, 000 11, 459, 000	89, 220, 000 24, 034, 000	Wool and woolens Machinery Wood Leather and footwear Clothing Timepleces	6, 390, 000 6, 923, 000 5, 110, 000 4, 870, 000	\$3, 213, 000 6, 604, 600 6, 604, 000 19, 960, 000

The chief increase in imports, as compared with the previous year, was in raw silk, machines, food stuffs, wood, and footwear. Exports of timepieces, dyes, machinery, and animals show an increase.

Consul Morgan, of Aarau, gives the following statement of Swiss

trade with the chief countries in 1897:

Countries.	Imports.	Exports.
Germany. France. Italy. Russia. Austria. England United States.	18, 66	Per cent. 25. 33 12. 07 5. 62 3. 53 5. 95 21. 07

It is gratifying, says Mr. Morgan, to note that the increase in imports from the United States in the year under review (\$10,337,000, against \$7,851,000 in 1896) far surpasses that of any other country. This increase was largely due to the import of wheat.

Consul Gifford, of Basle, after noting that the United States exports to Switzerland are really larger than are indicated by the figures, inasmuch as much of the trade is via other countries, notes an increase in the exports of leather, dried fruit, horses, machinery, copper and brass, bicycles, etc. He continues:

Who could ever have supposed that watch cases would be sent in any considerable quantity to the land of watches par excellence? Yet the rôles of the two countries are being reversed in this respect; our export in this line to Switzerland increased from \$39,000 to \$121,000 last year, and there is reason to believe that the current year will show a still more striking advance. Swiss statisticians ascribe this situation to the heavy duty imposed on watch cases in the United States.

Consul Ridgely, of Geneva, however, notes that while the export of watches from Switzerland to the United States has decreased, there has been a gain in the export of fine watches from Geneva to this country.

#### TURKEY.

# Consul General Dickinson, of Constantinople, says:

The only reliable or even approximate figures in regard to the trade of this Empire with the other countries of the world are the official returns of the Ottoman Government, and these are fully three years in arrears. The latest return, which was recently issued, is for the fiscal year beginning March 13, 1894, and ending March 12, 1895. According to this return, the imports into and exports from the Ottoman Empire were in value as follows:

Countries.	Exports.	Imports.	Countries.	Exports.	Imports.

While the foregoing figures for the fiscal year ending March 5, 1895, show an increase in both exports and imports over those of 1894, it is not to be presumed that there has been a corresponding increase, or indeed any increase, during the last two years. On the contrary, there are several indications which point to a falling off in trade, especially in imports, during 1897 and 1898; but the opinion of experienced judges is that there has been a gradual improvement and return to former conditions during the latter part of the present year. This opinion, however, is not supported by official invoices of goods shipped from Constantinople to the United States. The value of exports to the United States for the fiscal year ending June 30, 1885, as shown by invoices in this office, was \$2,017,826.17. In 1896, the total of exports was \$2,619,833.12; in 1897, it was \$2,364,240.67, while in 1898, it shrunk to \$1,678,065.71.

\$1,678,065.71.

While there are no new statistics obtainable, the activity in industries and trade in this consular district, and indeed throughout Turkey, is marked and unmistakable. Germany continues to show energy in every department of business, and is undoubtedly taking each year a part of the business given heretofore to England,

Austria, and France.

The English, who have heretofore done the bulk of the importing business in this country, are making no special effort to extend their business—except that a commercial agent for Turkey has recently been appointed—and they seem to be relying upon the reputation they have gained for selling reliable goods. Germany, on the other hand, has already acquired the reputation of manufacturing cheap and comparatively worthless products. The goods of American and English manufacture are the only ones in this market which have an unquestioned reputation for quality.

But, while American goods have an excellent reputation, so far as they have been introduced, there are some conditions which must be improved before a large increase of American commerce with this country can be expected. The heavy freight charges, amounting to nearly \$10 per ton, which American manufacturers are now compelled to bear, are practically prohibitory, except for products in which American manufacturers start with a decided advantage over those of other countries. The principal products of the United States now sold in considerable quantities in

The principal products of the United States now sold in considerable quantities in this market are tools (such as chisels, saws, and planes), locks and other house hardware, clocks and watches, cotton twills (unbleached) and "canot" (the latter being a blue twill much used in Asia Minor), rubber shoes, lamps, pumps, stoves, perfumery and patent medicines, lubricating and kerosene oil, typewriters, pianos, desks and chairs, machinery for flour mills, agricultural implements, iron water pipes and other products of iron and steel, sewing machines, and flour. This last-named article was but recently introduced, but its superior quality has attracted wide attention, and at present prices, it seems able to drive the Turkish, Russian, and Roumanian product from the market.

These are only a few of the American products which would find a ready market here, if the shipping and freight conditions were only moderately improved. The marked difference of cost in this market and in the American market of many articles and products which are rarely seen here, except of foreign manufacture, compels the inference that they might be profitably introduced under present conditions of transport. Some of these are furniture of all kinds, leather, and boots and shoes; sash, doors, blinds, and other finished building material; wagons, iron goods and general hardware, and cotton goods of every description. These last are considerably higher in this market than in the United States. There is already a firm demand here for unbleached American cotton goods.

The consul-general submits figures as to the actual trade which might justify the establishment of a direct steamship line between New York and Eastern Mediterranean ports, and adds:

The opinion of our consular officers in Greece and Asia Minor is unanimous, that an improvement of our freight service lies at the threshold of any attempt to increase the sale of American goods in these markets.

#### GERMAN COMMERCIAL INTERESTS IN TURKEY.

The London Times, October 28, 1898, speaking of the growth of German exports to the Levant since 1888, when the Deutsche Bank entered into financial relations with Turkey, says:

But far more important than the direct participation of German capital in the financial transactions of the Deutsche Bank in Turkey, were the indirect consequences to German industry and commerce of the establishment of this new banking connection with the East. The transaction of business by industrialists and merchants was facilitated, and German enterprise has not been slow to take advantage of its new opportunities. German bicycles, to take one of the most modern articles of manufacture, are rapidly superseding English and American machines in Asia Minor. According to a report of the French Chamber of Commerce in Smyrna, 15 per cent of the bicycles imported into Asia Minor are now delivered by German firms, who are said to owe the preference that is being accorded them to the fact that they make no extra charge for packing. The Berlin agricultural implement factory of Eckert & Co. is making most persevering and successful efforts to introduce the iron plow into Anatolia. Articles of furniture manufactured from iron, tables which can be taken to pieces and are composed of tin plates, japanned zinc ware—all of them goods which had hitherto been exclusively furnished by England—have recently been exported in considerable quantities from Germany here. Of the cloth trade, 50 per cent was a few years ago in the hands of England, and the other half was in the hands of the French and the Belgians. It is now claimed that at least 20 per cent of this trade with the Levant has been secured by Germany. This success is attributed to the lower price of the German article, and also to the favorable arrangements with regard to the terms of payment which German firms concede. It is admitted that the English article is in most cases better than the German. But the inhabitants of the islands of the archipelago "make no distinction between the English product and the German imitation. They only attach importance to the appearance of the cloth, the closeness of its texture, and, above all, to the attractive terms of payment." The competition of German with English goods in Palestine is very noteworthy. In 1894, England had 15.6 per cent of all the imports into Palestine in her hands; in 1897, her share had sunk to 10.8 per cent. Germany's share, on the other hand, rose in 1896 to 8.9 per cent, from 7.3 per cent in 1894. The Germans attribute their success in Palestine chiefly to the numerous commercial travelers whom they send out. According to a report of the British consul in Jerusalem, only four English commercial travelers visited Palestine in the year 1895, while there were twenty-nine Germans, eighteen Swiss, and thirteen Frenchmen who came to show their wares and to study the wants of their customers.

It is in branches of trade which lie a little apart from the greater national industries, but which, taken as a whole, contribute no less to national wealth, that Germans have exhibited their successful pertinacity. \* \* " Fertility of resource and a prompt willingness to abandon their own experiments when these prove unsuitable for the purpose in view, are also characteristic of German commercial methods. In the Balkan States, for example, they tried the establishment of warehouses for the exhibition of German products. This was found not to answer, and the idea of commercial museums was simply dropped. In its place the system of sending out large numbers of energetic, well-educated, and experienced commercial travelers was adopted, and it has hitherto yielded the best results.

cial travelers was adopted, and it has hitherto yielded the best results.

I append some statistics of foreign trade with Turkey. From the first line of figures, Turkish government contracts and nonrecurrent supplies of material for railways are excluded:

#### UNITED KINGDOM.

Official statistics show that the value of the imports into Great Britain in the calendar year 1898 was \$2,290,195,000, an increase of \$94,900,000 over 1897. The exports were \$1,135,796,000, or \$4,000,000 less than in 1897. These figures do not include the exports of foreign and colonel merchandise, which were valued at \$295,003,000.

The Statist, London, February 11, 1899, after commenting upon the favorable returns for January, 1899, compared with those for the same

month of the preceding year, adds:

There is, however, one feature in our foreign trade which we continue to regret, viz, the continued small purchases of our goods by the United States. Notwithstanding our immense and abnormal demand for American products, which has now continued for nearly two and a half years, and notwithstanding the increasing prosperity of the American people, the United States are still buying our goods sparingly. \* In view of the exceptional balance of our imports over our exports in 1898, amounting to the colossal figure of £177,000,000 (\$861,370,500), or nearly double that of ten years ago, it is of special interest to ascertain from whom we have been buying so largely, and to whom we have sold so little. It is not yet possible to ascertain to whom we have reexported some of our imports; but we are now in a position to see from which countries we have bought, and to which we have sent British produce. In 1898 the excess of imports over exports, of British produce only, reached the immense sum of £237,000,000 ( $\pm$ 1,153,360,500). Of this no less than £111,000,000 ( $\pm$ 5,101,150). (\$540,181,500), or nearly 50 per cent, was due to our trade with the United States. (\$\\$63,264,500), but our exports thither actually declined £6,272,000 (\$30,522,688). Hence the balance against us for the year increased no less than £19,279,000 (\$93,821,254). We need scarcely again point out the abnormal conditions which brought about this unusual state of affairs. We would, however, again direct specially again to the state of affairs. cial attention to the fact of our having bought from the United States produce to the value of £126,000,000 (\$613,179,000) in 1898, while that country bought British goods to the value of only £14,722,000 (\$71,644,613). Had the States in 1898 increased their to the value of only £14,722,000 (\$71,644,613). Had the States in 1898 increased their purchases of our goods in some degree in proportion to our increased purchases from them, instead of a small decrease in our exports we should have had a very large expansion. Our total exports for the year decreased £829,000 (\$4,034,329), and our shipments to the States fell off by £6,272,000 (\$30,522,688); hence, our shipments to the rest of the world increased about £5,440,000 (\$26,173,760). Our trade with India is in marked contrast with that of the United States. Here our imports increased by £3,162,000 (\$15,387,873), but our exports also expanded £2,723,000 (\$13,251,480). Our imports from Germany increased £2,537,000 (\$12,346,211), and our exports thither expanded over £900,000 (\$4,379,850). From Argentina we bought an additional £2,000,000 (\$9,733,000) worth of goods, and that country in return purchased an additional £785,000 (\$3,820,203) of our products. In fact, the United States is practically the only instance where our larger purchases of their products have been accompanied by smaller shipments of our own goods. It is true we bought £2,800,000 (\$13,626,200) less from Russia than in the previous year, while that country increased its purchases of our goods by £1,683,000 (\$8,190,320); but this was due to Russia in 1897 having placed large orders for machinery in this country, which were not completed by reason of the engineers strike, and which were consequently postponed pleted by reason of the engineers' strike, and which were consequently postponed until 1898; and, on the other hand, to the failure of the Russian harvest preventing that country from sending us as much wheat as in 1897.

The Statist gives tables, showing the trade by countries, from which the following statement, showing the exports of British and Irish produce to the principal countries, with the imports therefrom in the year 1898, compared with 1897, has been compiled:

	Ex	ports.	Importe.		
Countries.	1898.	Increase or decrease, com- pared with 1897.	1898.	Increase or decrease, com- pared with 1897.

The gains in the exports of machinery were chiefly in locomotives and textile machinery. Russia took nearly four times the value of locomotives compared with the preceding year. Other notable gains in this line were to British India, Australasia, and South America. The exports of textile machinery to Russia were largely increased, and Germany, Holland, India, and the United States bought more in this line than during 1897. The most notable decrease was to Japan, which bought less than half the value of the previous year. The pigiron exports decreased upward of 160,000 tons, and railroad iron, bar, angle. and rod iron, and galvanized sheet-iron exports also show a falling off.

The Birmingham Daily Post (clipping transmitted by Consul Halstead, of Birmingham), comments as follows on the trade of 1898:

The results of the year's trading can not be considered altogether satisfactory, for several reasons. In the first place, the standard of comparison for the latter part of the year was an exceptionally low one, owing to the operation of the engineers' strike in the autumn of 1897. In the next place, the only material increase during 1898 was clearly referable to the reaction in the same branch after the strike was over, and finally, our principal industries—yarn and textile fabrics, and metals and their manufactures—show in the aggregate substantial decreases. Another unsatisfactory feature of the year's trading is the large increase of nearly two millions in our imports of manufactured goods, and especially girders, axles, cycles, machinery, steel and iron, glass and textile goods. It is certainly rather disconcerting to find that, while our exports of cycles have fallen off to the extent of nearly half a million, our imports of similar articles from the United States and Germany have increased by £85,000 (\$413,653). In partial explanation of the growth of manufactured imports last year, however, we may mention that some of our machinery branches were so busy as to be unable to cope with the orders coming in, and that considerable quantities of locomotives and railway material had to be obtained from the United States. The broad result of the year's shipping trade is an increase of nearly twenty millions, or 4.3 per cent, in imports, and a decrease of 0.35 per cent in exports. falling off in the latter is mainly in cottons, woolens, and iron and steel, but the tendency in the textile branches, and especially cottons, for some months past has been in an upward direction. Foodstuffs and raw materials for our various industries still compose the bulk of our imports, though manufactured articles, as already intimated, are on the increase. The decline apparent in our exports of textile and metallurgical goods appears to be due largely to the diminished requirements of the United States, South Africa, and South America, and to the disturbance of our West

Indian trade caused by the war. Pig iron is still a declining item, owing to the contraction of German and Belgian orders, and the United States, of course, has been the principal factor of decrease in our shipments of tin plates; but all classes of iron and steel, with the exception of telegraphic wire, old iron, and unwrought steel, show a more or less decided shrinkage for the year, though the falling off in galvanized sheets is almost nominal. Our exports of wrought copper, sheathing, and brass compare unfavorably with the corresponding totals for 1897, but we are doing more in the unwrought metal. With the exception of plate glass, there are no increases in the fictile and earthenware section, and among our miscellaneous exports, the only increases calling for note are in ammunition, railway passenger carriages, coals, cordage, carpets, plate and plated wares, machinery, steam engines, ribbons, and soap. There is a slight falling off in the tonnage of British vessels cleared and entered at British ports, and an excess of six millions in the imports of gold and silver. On the whole, there is evidently not much to complain of in our shipping trade, though there are evidences of weakness or decline in certain branches which demand the careful consideration of our manufacturers.

Mr. Henry White, chargé d'affaires at London, sends, under date of November 16, 1898, an editorial from the Times of November 14, commenting on the reports of Mr. Worthington, the special commissioner appointed by the board of trade to report upon British trade in certain South—American countries, and on the Blue Book "Opinions of Her Majesty's Diplomatic and Consular Officers on British Trade Methods," recently issued, which are, the Times says, "calculated to inspire very serious misgivings as to the future position of British trade in the markets of the civilized world." The article continues:

There was a time, before the United States had recovered from the economic cataclysm of the civil war, and before Germany, united and prosperous, intelligent and enterprising, had entered the lists as a serious competitor, when British trade enjoyed a virtual monopoly in the leading markets of the world. It was "Eclipse first and the rest nowhere." Demand was increasing, and England alone was in a position to meet it with supply. Then came the quick-witted merchants of Germany and the United States, steadily and quietly pushing their wares into the gaps left by the monopolist methods of British trade. "It is all the work of those pushing foreign consuls, who are really commercial agents paid by the State!" exclaimed the aggrieved British merchant. "What are our consuls about? They seem to have gone to sleep! The State ought to do for us what we have lost the habit of doing for ourselves."

The State ought to do for us what we have lost the habit of doing for ourselves."

This panic-stricken appeal to the consular Cæsar has now had its answer. From thirty-three different countries and communities, ranging from China to Peru, from Russia to the Pacific islands, from Norway and Sweden to Argentina and Paraguay, from the United States to Zanzibar, the consuls and diplomatic agents have spoken, and the board of trade has tabulated their deliverances in 171 separate extracts from their reports. \* \* \* These extracts are practically all in the same tale. British merchants have so far failed to adapt themselves to the transition going on all around them from monopoly to competition. It pains and surprises them to find that the goods they offer, though acknowledged to be superior, are not preferred by the benighted foreign purchaser to the inferior goods offered by their upstart rivals. \* \* \* The British merchant, by comparison with his German rival, employs very few commercial travelers abroad, and those he does employ too often speak no language but their own. He has his own method of packing, which is adopted to suit his own convenience, not that of his customer, and is in many cases a serious impediment to the sale of his wares. He despises small orders, rarely risking a sprat to catch a whale, and he is stiff and uncompromising in the matter of granting credit facilities adapted to the habits of business in vogue with his foreign customers. This, and much more to the same effect, is what the consuls tell him from all parts of the world. It is clear that it is not the consuls who have gone to sleep, but the British merchant, lulled by the still potent opiate of a vanished monopoly. The commercial Barbarossa is awake at last, however, and his methods, according to the consuls, are in almost every respect the exact opposite of those of his still slumbering rival. In a single word, he exports more mind than his rival.

Yet, so irresistible was the momentum acquired by British trade in the days of its monopolist prime, that the rivalry of its younger and more enterprising competitors has hardly now begun to be seriously felt. Our exports still top the commercial

See Advance Sheets No. 341, February 3; Consular Reports, No. 223, April, 1899.
 See Advance Sheets No. 260, October 29; Consular Reports, No. 219, December, 1898.

world. But "the moving finger writes, and having writ moves on." Our exports were £309,000,000 (\$1,503,000,000) in 1891, and only £294,000,000 (\$1,426,000,000) in 1897. Those of Germany were £176,000,000 (\$856,000,000) in the former year and £197,000,000 (\$958,000,000) in the latter; those of the United States, £184,000,000 (\$891,000,000) in 1891, and £218,000,000 (\$1,060,000,000) in 1897. We hold our own, perhaps, but we do not advance, and our rivals are fast coming up behind. It is easier to lose a market than to recover it, and it is plain that, even if we tardily adopt methods which have given our rivals so many advantages, we shall only be able henceforth to compete on equal terms with those who have latterly done better than we have, in a field which we once held against the world. There is no blinking the fact, and no disguising its importance, that the methods of monopoly are singularly hard to adapt to the conditions of competition. A man who starts afresh with intelligence, enterprise, and adequate capital, but with no traditions and no prejudices, is much more likely to succeed in "a fair field and no favor" than a man who has to shake himself free from the stereotyped and antiquated traditions of former days and other circumstances.

#### UNITED STATES GOODS IN ENGLAND.

# Consul Halstead, of Birmingham, says:

The commercial relations of the United States with Great Britain and other great trading nations are changing so rapidly, and the changes are so much in favor of every home interest, that one hesitates when giving even the simple facts, for fear of seeming to indulge in exaggeration. I shall therefore limit myself to the statements, first, that in my opinion there is hardly a single line of American manufacture of articles used also in other countries, as well as many novel things not known elsewhere, but could be profitably exported if proper steps for its introduction were taken, and if careful, slow, reasonable, and common-sense methods of sale were adopted; second, I must add that, while I believe we are the best manufacturers in the world, I am also convinced that we are the poorest traders, and this is impressed upon me over and over again every day in my correspondence with American merchants and manufacturers, and in my observations of the way they are handling the new export trade; third, I believe that American export trade is increasing because of our superiority in manufacturing knowledge and natural resources, and in spite of our inferiority in trading knowledge, our unwillingness to learn foreign trading customs, and our lack of organization. If a small portion of the vast sum of money in the United States now seeking investment could be employed in some form of export scheme to handle American goods, we would soon be able to record a greater export of American goods than of the raw products of the soil, though to-day we are boasting of an excess of manufactured exports over the manufactured imports. Instead of summarizing the conditions I see here, I offer the following clippings from British publications, selected somewhat at random from many in my possession, and illustrating the keen appreciation here of what our competition means and may mean:

#### [From the Birmingham Daily Mail.]

By cheaper methods of production, America is overtaking us in more than one department of manufacture. Startling to the Midlands are the figures published to-day concerning nails. Statistics show that the exportation of wire nails from the United States has grown from 1,547,078 pounds in the fiscal year 1888 to :2,×94,099 pounds in the fiscal year 1898. The growth, which has been phenomenal ever since the beginning, has been especially so in the last two or three years. In 1895, the exportations were 4,367,267 pounds; in 1896, 8,031,927 pounds, thus practically doubling in one year; and in 1898, 22,894,099 pounds, showing a similar gain in the last two years, the exports of 1898 being five times more than in 1895. This is not very pleasant when one puts this side by side with the fate of the nail trade in the Midlands. Moreover, Chicago has become the seat of an iron-bedstead industry that threatens to defy competition, the United States generally is knocking even Germany out in the manufacture of cheap boots, and, besides this, American steel rails are being sent to Ireland and Bombay, while the estimates sent in for the supply of plates for the construction of a 6,000-ton ship show that in accepting an American contract, there will be an economy of \$10,000 as compared with the lowest English tender.

#### [From the British Iron and Coal Trades Review.]

The wenderful achievements of the United States in the way of reducing the costs of the production of iron and steel, form the subject of one of several articles that have been written for the Review by a high authority. These figures supply the most obvious answer to the now almost daily question, as to how the United States have

succeeded in bringing their costs of production down to such a low level, with nominally high labor costs and long transportation still a part of their daily lot. It appears that the labor cost of producing the crucible steel that was manifactured in the United States between 1860 and 1865 was about £15 (\$72.99) per ton, against probably not more than 10s. (\$2.43) per ton at the present time, and that between 1880 and 1880, the labor cost of producing a ton of pig iron, speaking generally, had been reduced more than one-half, while in some States, the average annual output of pig iron per employee at the furnaces had more than trebled. All this, however, is not any more wonderful than the revolution that has been brought about in the cost of raw materials. It seems but yesterday when Lake Superior ores, delivered at works in Pennsylvania, cost 30s. to 35s. (\$7.29 to \$8.51) per ton, whereas the same ores cost to-day about 15s. (\$3.65), more or less. Most of us can remember when coke cost 30s. (\$7.29) per ton delivered at Chicago, while the same fuel at present costs 12s. to 15s. (\$2.92 to \$3.65) similarly delivered. The wage cost of producing a ton of pig iron at the furnaces at Pittsburg or Chicago was equal to 20s. (\$4.85) less than a quarter of a century ago, whereas to-day, in the best regulated works, it costs 2s. to 3s. (49 to 73 cents). In most other items of cost, similar economics and reductions have been effected. It has been the union of more efficient labor, more economiccal transport, and increased competition among mine owners, that has enabled this remarkable change to be effected. Twenty years ago, mine owners were hardly satisfied with less than 10s. (\$2.43) per ton profit on the highest grades of ore. To-day, they will gratefully accept less than a shilling (24 cents). The business is nevertheless a prosperous one, because the mine owner has substituted small profits on a large output for large profits on a small output, and is doing a more sound and healthy business. The same remarks apply to

The success of our American friends has been due to their vigorous and persistent attention to elements of business administration, which have been less effectively developed at home. The first of these has been a more complete control of the conditions of labor, based upon a generous recognition of the principle that nominally high-priced labor is not necessarily the most expensive. The second has been the command of extensive economical and competitive means of transportation. The third has been the substitution of combination for competition, wherever possible. The fourth has been the practical application of the old rule that if you want to produce cheaply, you must produce on a large scale. There are other lessons inculcated by American experience for those who are capable of reading between the lines. Unfortunately, British manufacturers are often so situated that they can not effectively apply all these lessons, but we can not help thinking that they might do so to

a larger extent than they have hitherto done.

#### [From the Birmingham Daily Mail.]

We have received this morning from one of our American correspondents a curious illustration of the competition to which English, and especially Midland, trade is being subjected by the United States. During the last fortuight, the prominent topic in shipping circles is the vast consignment of American produce to Great Britain. From Pittsburg are being shipped, via Boston, enormous quantities of pig iron to Birmingham. "Just think of it," said an American shipper to our correspondent, "sending iron in these quantities to the iron districts of England. Who would ever have thought of it years ago? The bare suggestion of it would have been enough to stamp a man as a fit subject for a lunatic asylum. Yet we have 2,000 tons on the way to Boston for shipment to England." Our correspondent was curious to know how the trade could be done at a profit. "Very simple," was the laconic reply. "We can and do outsell the other fellow on the other side. Just consider the expense of getting iron to Birmingham. The freight charges from Pittsburg to Boston are about \$2.50 a ton; the ocean charges are about the same, and getting it to Birmingham costs another \$2.50; and yet we can do this at a good profit." Those figures—we assume, of course, that our correspondent presents them accurately—are highly instructive. They show, at any rate, that it is possible to

<sup>&</sup>lt;sup>1</sup>In the news columns of the Mail the statement appears that the freight from Pittsburg to Boston—400 miles—was the same as from Liverpool to Birmingham—some 97 miles.

overestimate the effect of distance as a factor in commercial competition. Note, in the first place, the difference between the English and American railway charges. American trade with Europe is hardly handicapped at all by the Atlantic. Apparently, it costs no more to send a ton of Yankee iron from Boston to Liverpool—a distance of close upon 3,000 miles—than it does to send a ton of Birmingham-made goods from here to the Mersey. Very often, the iron comes as ballast. Every year the great ocean-traveling cargo steamers get bigger and faster. It is no use launching small cargo steamers nowadays. Shipping companies have long since learned the stern truth of that. Freight charges have been reduced to such a low rate, that the only chance of making a profit for the shareholders is to build the boats as fast and as big as possible. All this must tell in favor of American trade. Our correspondent states that in Germany American iron is making such inroads that the native iron-masters are advocating "extortionate" railroad charges from the seaboard to the interior, so as to shut out the trans-Atlantic iron. This, of course, is one way of fighting the giant of the West. But it does not accord with English ideas of free and unfettered commerce. In England we fully recognize that in America we have to compete with a country of unlimited natural resources. Nothing could be more remarkable than the statistics of the exports of American merchandise. The United States now ranks a good second among the exporting nations. What the approaching century has in store for her can only be approximately guessed. As a producer of iron and steel, she is already beating everybody. The enormous contracts for steel which have gone to the United States lately from all parts of the world tell their own tale. Moreover, she is sending nuts and bolts to Birmingham and neighborhood at a price which would enable the merchants to buy them and re-export them at a profit to other countries.

# Consul Boyle, of Liverpool, says:

The past year has been the best one in history for trade in American products in this district, and there is every reason to believe that it will continue to grow. There has been a very material decline, however, in trade generally at this port during recent years. There are two very remarkable facts in connection with this great falling off in the trade of Liverpool. First, that, contrary to general belief, the falling off in exportations has been not only with the United States, but with the world at large, and, so far as importations are concerned, those from the United States have been continually increasing; second, this decrease of trade is in spite of the fact of a substantial increase in the tonnage of vessels entering and clearing at this port. While the figures covering the importations at Liverpool from the United States are not available, there is not the slightest doubt that more American goods, both agricultural and manufactured, came into Liverpool during 1897 than in any other year.

It is to be doubted whether the British public generally realize the extent to which their trade has fallen off. The explanation generally given for the decrease during the past year is that it has been caused by the great strike of the engineers, which ran through the latter half of 1897 and well into this year. Labor has, during the past year, been employed at increased wages over those paid previously, as a rule. But the productive capacity of the British mechanic no longer takes the lead. It is exceeded by that of the mechanic of the United States and of Germany. This is owing to three reasons: First, the British manufacturer does not avail himself of the latest improvements in machinery; second, the British mechanic is not now as technical as the American and the German mechanic; third, the labor market is continually being disturbed by strikes and lockouts. In spite of the above facts, there is a general confidence that the British foreign trade will revive. Manufacturers are becoming more enterprising in using up-to-date plants (the machinery largely coming from the United States). The engineers and coal miners and their employers will probably not have another dispute for some time; the labor outlook, generally, is more pacific than for some time past; technical schools are being opened in most of the manufacturing towns; and in Liverpool and other trade centers, commercial schools have been opened to more especially meet German competition in foreign markets.

#### SUPPLEMENTARY REPORT.1

With an imaginary line of 100 miles as a radius and the junction of 24° west longitude and 16° north latitude (Greenwich) as a pivot, inscribe a circle. Within this area lies the Cape Verde Archipelago. It is crescent in form, the convex side toward the coast of Africa, with Maio, the most easterly of the group, about 300 miles from the continent. These islands are divided into two sections, the windward comprising San Antonio, St. Vincent, Sta. Lucia, St. Nicholas, Branco, Razo, Sal, and Boa Vista; the leeward, Maio, Santiago, Fogo, Brava, and the Rombo islands. They were first discovered in 1446, receiving

their name from Cape Verde, West Africa, discovered by Deniz Fernandez<sup>1</sup> in 1443. In 1460, it appears that they were presented by D. Alfonso V to his brother, and by the treaty of peace with Spain, September 4, 1479, <sup>1</sup> they were declared to be a Portuguese possession.

The best time for navigation here is from the 15th of October to the 15th of July, the wind blowing generally from north-northeast to east-northeast; during the other months, or rainy season, from the south.

The island of San Antonio is most picturesque, producing excellent coffee, the dragon tree (*Dracæna draco*), and tropical fruits of several varieties. It has three harbors: Carvoeiros, Tarrafal, and Ponta do Sol. The population is 36,615. Its highest peak, Tope da Corōa, is 7.400 feet above sea level.

The island of St. Vincent is now the most important of the group, owing to its geographical position, fine harbor—capable of affording shelter to a large number of vessels—and its prominence as a coaling and cable station, being situated half way between England and the New World. More than 1,500 steamers arrive annually to receive some 400,000 tons of coal at Porto Grande. With the development of Brazil, Argentina, West, South, and East Africa, the importance of this island as a naval and military post has already been foreshadowed. Five direct cables touch its shore, two from Portugal, via Madeira, two from Pernambuco direct, and one from Bathurst, via Santiago. The company employs some forty clerks, who toil day and night.

There are three coaling companies, well equipped with docks, tugs, lighters, etc. If some enterprising American could get a proper concession for a cold-storage warehouse, also for a slip way capable of hauling up a steamer of 2,000 tons register, I think these would pay a

handsome dividend on the investment.

Formerly, the orchilla weed (Rocella tinctoria) was exported from

here; now only goatskins are sent. Population, 6,650.

The island of St. Lucia is very small, and is used for pasturage. Population, only a few shepherds.

Branco and Raza are very small islands, uninhabited, and of no

importance.

St. Nicholas is a fertile island, well cultivated, and with four small harbors, St. George, Tarrafal, Lappa, and Preguiça. Population, 12,425.

The island of Sal produces salt to the amount of 150,000 tons annually. It has three harbors, Palmeira, Rabo de Junco, and Sta. Maria. Population, 539.

Boa Vista is another salt and cattle producing island, with but one harbor, Porto Inglez. Population, 3,934.

The island of Maio produces salt and cattle. It has a large harbor,

another Porto Inglez. Population, 1,813.

The island of Santiago, the chief one of the archipelago, has several bays, the more important being Tarrafal and Porto da Praia. There is also a coaling and cable station at the latter port. The purgueira (Jatropha curcas) is grown here in large quantities; also sugar and coffee. The latter commodity might be made an important industry if properly looked after, for it grows in nearly all the islands. The size, color, and flavor of the seed is excellent and is much sought after in Portugal and her colonies. The highest peak is San Antonio, 7,400 feet above sea level. Population, 61,982.

The island of Fogo is a huge volcano, oval in form, and rising like a cone from the sea to an altitude of 9,760 feet. Its last eruption occurred in 1785. The island is very healthy, and in former times exported

Annaes da Marinha Portugueza, by Ignacio da Costa Quintella, vol. 1, p. 111. C R—VOL 1—13

orchilla. The purgueira and coffee grow well here. Population, 20,225. The island of Brava is the garden spot of the Cape Verde Islands, with a good but small harbor. Produces goats and tropical fruits. It has fine mineral springs. Population, 9,784.

The islands of Rombo produce the orchilla weed and bird guano of

an inferior quality.

#### PASSPORTS.

All persons leaving Portugal or any of its possessions, by sea, although they may be bound for a port in the colonies or the peninsula, must present their passports to steamship agents in order to secure a ticket. For interisland voyages here, no passport is necessary.

#### CURRENCY.

The paper money of Portugal is not received at its face value here, or at Loanda, the discount being about 10 per cent; nor is the paper money of one colony good in another (received at about 10 per cent discount) or on the peninsula. Silver and copper coin once exported from Portugal is prohibited reimportation.

Owing to a steady depreciation of the Portuguese currency, merchants who purchase goods at three, six, or twelve months have been subjected to many hardships. On January 1 last, the pound sterling

was quoted at 6,600 reis; to-day, its value is 8,000.

#### CUSTOMS TARIFF AND PORT REGULATIONS.

No changes have occurred in either the customs tariff or port regulations since 1892.

#### POSTAL RATES.

In the Official Gazette of the 10th instant, I find the following: "The acts of the International Postal Congress, of Washington, signed the 15th July, 1897, are approved, to be ratified," etc. Hence I omit to send a copy of the regulations now in force.

Bento, João Bento e Serra & Faria.

R. M. BARTLEMAN,
Acting Consul.

Santiago, September 13, 1898.

#### TRADE WITH THE UNITED STATES.

In a report dated September 8, 1898, Mr. Bartleman says:

The trade between the United States and the Cape Verde Islands is carried on by small sailing vessels (American and foreign) of about 200 tons burden. These are few and far between, and their first port of call is usually St. Vincent, where the cargo is reshipped to its destination. The number of American vessels arriving and departing in the

last year was 24. This figure includes whalers, which remain on the ground, entering and departing with frequency from Brava, from which port oil is shipped to the United States.

Value of exports declared for the United States at the several consular offices in the Cape Verde Islands during the year ended June 30, 1898.

# LIBERIA.

I submit my annual report of the statistics of the Republic of Liberia as well as I have been able to collect them. They are very inaccurate, yet they are as near perfect as can be obtained from the comptroller's office. He informs me that it is impossible to secure a full and accurate statistical report, before the assembling of the legislature in December.

The imports and exports to and from the United States are less than those to and from Holland or France; they are even less than those to and from the United States for the same period of time prior to 1898;

but this can be easily accounted for in part, first, when it is considered that an almost direct line of steamships plies between Holland, France, and Liberia, while no steamships or sailing vessels enter Liberian waters from the United States.

Secondly, the war between the Golah tribe, in the interior of the Republic, and the Liberian Government, during the year, has had a most serious and damaging effect upon the Liberian markets on the coast.

Thirdly. The recent war between the United States and Spain had the effect of driving every American vessel or merchantman from the coast of Liberia.

The imports of Liberia are valued at nearly \$3,000,000. The exports

are far short of that amount.

Germany carries off the palm as an exporter, sending nearly twothirds of all the goods imported here. England comes next in

importance.

Coffee, the staple product of Liberia, has recently so declined in value as to cause Liberian merchants and farmers to refuse to sell, holding for an advance in prices. The same is true of ginger, cochineal, and other farm productions.

Rubber, which is an experiment in Liberia, is assuming importance in the export trade. Palm kernels, palm oil, and fiber, large quantities of which are shipped monthly to Liverpool and Hamburg, are now demanding the attention of the European merchant and manufacturer.

The commerce of west and south Africa is carried on almost entirely by English and German steamships, a Spanish steamer touching at

Monrovia once every three months.

Messrs. Elder, Dempster & Co., of Liverpool, and the Woermann Steamship Company of Hamburg, entered upon the coast trade under many disadvantages, yet by a careful application of business principles, they have become rich, strong, and independent. The boats of one or the other of these companies touch here weekly, bringing the necessaries of life, and transporting in return native products to Euro-

pean markets.

The principal merchants of Liberia, excepting a few German and Englishmen, are former citizens of the United States, and adhere to our customs, manners, and principles. They have many relatives and friends in the States, through whom they can greatly facilitate business transactions, and they are very anxious to open up a reliable and active market in our country. As an evidence of this, during the war between the United States and Spain, I was frequently called upon to certify to invoices of consignments of native products to American merchants, notwithstanding they had to be shipped by way of Liverpool or Hamburg and pay double freight rate. So great is the demand for American products or manufactures, that the merchant is obliged to use every possible effort to procure them. Articles of food and clothing, such as bacon, lard, butter, corned beef, dried and canned fruits, besides boots and shoes (which challenge the world in neatness of style, beauty of appearance, and durability of material) are greatly admired and desired both by the merchant and consumer.

It is greatly to be regretted that American steamship companies have

been so neglectful of our interests in this continent.

The coast of Africa from Bathurst, at the mouth of the Gambia, and the capital of the British colony of Gambia, as far south as Cape Palmas, on the southern frontier of Liberia, is to a great extent inhabited by persons who were formerly citizens of the United States, and who prefer the products and manufactures of the country.

A fortune awaits the American steamship company which will equip boats to ply direct between the United States and the coast of West Africa. In making this venture, I would not advise an excessive outlay at first; possibly two good steamships, properly equipped for passenger, mail, and freight accommodations. The number could be increased with the trade. It is all important that the company should exercise patience and be not too hasty in looking for returns; it should first lay such a foundation for permanency as will establish confidence in the minds of the people.

In connection with this venture, firms of wholesale and commission merchants will necessarily be established. These, in order to insure success in the coastwise trade, should be very discreet in all their dealings with their patrons; not neglecting to be prompt and honest in

every transaction.

As the American merchant is well acquainted with the necessity of having traveling agents, in order to advertise and introduce his goods, it is hardly necessary to say that he will find it greatly to his advantage to have some intelligent and reliable person in each port whose business it should be to solicit consignments, receive and deliver the goods transmitted, etc.

The eyes of the civilized and commercial world are turned toward the United States as never before, and the American merchant has an unprecedented opportunity to extend trade. Judging from personal observations since I have been on the coast, a healthy and profitable return awaits honest and patient endeavor on the west coast of Africa.

OWEN L. W. SMITH,
Minister Resident and Consul-General.

MONROVIA, October 7, 1898.

# LOURENÇO MARQUEZ.

My acquaintance with South Africa dates back to 1889. I first visited this port in 1892 and found it to be a squalid uninviting town, consisting of a few sandy roads and a few hundred houses, nine-tenths

of which were in a more or less dilapidated looking condition.

In June, 1897, I visited this port again and saw many improvements here, several miles of macadamized roads, and many new and substantial buildings. When I left this port in July, 1897, I counted some forty vessels in port, one-third of them steamers discharging cargo. Several steamers were of 10,000 tons and upward. Everybody was busy, and the customs and railway departments had all they could do to handle the immense volume of merchandise that was being imported, most of which was for immediate shipment by rail to the Transvaal.

When I returned in May, 1898, the first thing I noticed was the empty appearance of the harbor and the small number of vessels in the river. But as I had previously called at Cape Town, Port Elizabeth, East London, and Durban, and had observed the small amount of shipping in those ports, and had also heard many of the merchants of the first three ports complain of the bad state of the trade of South Africa, I

was not surprised.

At the Cape ports, I was told over and over again that the sole cause of the present commercial depression in South Africa was the condition of affairs in the Transvaal. At the port of Durban, I was teld that the

mercantile community was not worrying as to the causes of the bad times in the Transvaal, but was trying to work up new markets at their own doors and in Zululand, and that the merchants were, on the whole, doing well. As one large importer of American goods told me, they had been doing a large business with the Transvaal, but the competition had been very great and the profits correspondingly small. Now, they were doing a smaller but a more profitable business in their own country, where all accounts were paid at the end of each month, and where there was little or no risk of loss on account of bad bills or fraudulent bankrupts.

Here in Lourenço Marquez, where there is practically no local trade, the present commercial depression is very keenly felt and retrenchment is going on everywhere. The banks are doing their utmost to reduce overdrafts, and to get rid of the demand paper held by them, and will

advance no money except on the very best collateral security.

As far as I can see, the present depression has been caused more by overtrading than by anything else. Importers have ordered more goods than could be disposed of, and until the present surplus stocks are worked off, there will not be any very great demand for fresh supplies. For instance, it is estimated that there are enough Baltic and Norwegian heavy deals and timber in the country to last this port and the mining communities for another two years. The same is true of many other trades. Large stocks, which have been fully paid for in gold, are held on hand and no return of the money thus invested can be expected, until this surplus begins to be disposed of. The payments for these stocks have caused a serious drain upon the currency of the country.

In addition to the constantly increasing output of raw gold, which is all shipped to England and Europe, it is estimated that during the present year, the country has suffered a loss of gold coin to the amount of about \$5,000,000 per month, destined, partially, to pay these large debit balances caused by overtrading, and partially for South African mining stocks, which timid investors have thrown upon the market and which have been bought up cheap by sundry wealthy financiers of the Transvaal who saw in them a good investment for their surplus gold. However, the output of gold from the Transvaal is steadily increasing, as the returns accompanying this report will show. The surplus stocks of goods are being worked off, and it is only a question of time when the country will prosper again.

In addition to its gold, the Transvaal has another source of wealth in its extensive coal fields. These fields are within easy reach of this port by rail, and a few enterprising firms are already working up a very good business in bunker coal. At present, all coal shipped from here is lightered off; but one large coal wharf is already under construction, and another is soon to be begun. In a few months, when these wharves are finished, coal can be delivered as fast as the vessels can receive it. The coal supply of this port is treated of further on under the heading

of "Coal."

## CANADIAN ENTERPRISE IN DELAGOA BAY.

One of the largest houses here is the Lingham Timber and Trading Company, Limited, a Canadian concern. This company is a large importer of Oregon and pitch pine from the United States, and of Baltic timber and deals. It has also done a large trade in American flour, and is now going into the milling business here, having secured a con-

cession for a long term of years from the Portuguese Government, to operate a flour mill in this district. At Matolla, about 5 miles from here, up the river, this company has built a large flour mill, in which the machinery for grinding wheat is now being installed. The mill is built of Oregon pine, and is roofed with English corrugated, galvanized iron. All the machinery is of Canadian manufacture. Close to the mill, the foundations of a large and substantial grain elevator are being built, and on the water front a large wharf is being constructed, along-side of which, when it is completed, vessels of 10,000 tons can safely lie and load and discharge at all stages of the tide.

A branch line is to be built connecting this wharf, the elevator, and the mill with the main line of the Delagoa Bay Railway, at a point about 6 or 8 miles from this town. When the wharf and branch railway line are completed, this company or a subsidiary company will

inaugurate an export and bunker coal business.

In addition to these three lines—lumber, flour, and coal—the company is considering the advisability of building a large oil store, and also a cold-storage warehouse, and of acting as agents for the leading American refiners of kerosene oil and for the shippers of Australian frozen meat. The rinderpest has practically destroyed the source of the fresh beef supply of this country, and South Africa is now importing frozen meat from Australia and live oxen from Madagascar.

Madagascar, I may mention, is rich in cattle. When I resided in Mozambique, I frequently heard of shipments of oxen from Madagascar that had cost, all told, including freight, landed on the beach, less

than \$20 per head.

The career of the Lingham Timber and Trading Company will be watched with interest. Its directors have great faith in the commercial possibilities of this port, and of the country back of it. Such enterprise is certainly deserving of success.

In view of what I have hereinbefore said upon the subject of coal, the following copy of an editorial in one of the leading Transvaal daily

papers is of interest:

[Editorial in the Standard and Digger's News, the "authorized Government Gazette for Witwaters-rand," Johannesburg, South African Republic, August 2, 1898.]

## DELAGOA.

In the haze of rumor and vague assertion that surround Delagoa Bay, we are glad to see some practical steps being taken by responsible people in this country. Fourteen Road' members have returned from a visit to Delagoa, where they inspected the town and the bay. In a steamer put at their disposal, they made a tour around the harbor and saw the pier accommodation and the want of it. It depends upon the N. Z. A. S. M. and the Portuguese authorities whether the Transvasl shall enjoy the benefit of one of the greatest industries in the world.

the benefit of one of the greatest industries in the world.

There are at least 15,000,000,000 tons of first-class coal in the Transvaal alone, about twice as much of average good coal, and about seven times as much of coal

of rather inferior quality.

We have larger coal fields than England, and yet there were 202,000,000 tons of

British coal brought to bank last year.

Here is a fortune for the taking, and we are glad to see that the Government is awaking to this supreme source of wealth and prosperity. Coal is more valuable than gold even, since the commerce and national defense depend upon the supply of fuel. No other power but the Transvaal Government can influence both the railway and the Portuguese at Delagoa, and we trust that this matter will be pressed with energy and enthusiasm.

<sup>\*</sup>Netherlands South African Railway.

<sup>&</sup>lt;sup>1</sup> Volksroad or Transvaal Congress.

I have received inquiries from the Philadelphia Museums, and also from a number of business houses in the United States, relating to the demand in this district for sundry specified articles.

The information asked for is being compiled as it is obtained, and for the benefit of the mercantile community at large, I have decided to incorporate this special information into this report. Only a few lines have as yet been reported upon, but all inquiries will be given full attention in due season.

A great many of these inquiries call for special investigation and for information that can only be supplied by a very limited number of officials and merchants. Some of these subjects will deserve separate reports, which will be transmitted later, as they are completed, as supplements to this report.

The first subject upon which the Philadelphia Museums desire a

report is that of

#### BEER.

There is a very good market for beer of all kinds here. Large quantities of English ale and stout are consumed; but these beers are too heavy and are unsuited to the climate, and the old resident after a while drops them for something lighter, such as German Pilsener beer.

Lately, several parties have endeavored to introduce American lager beer here, and, considering the present commercial depression, I think they are making some headway. The brands that have been sold here are generally well liked, and, when trade improves, a very good business in this line can be worked up by American brewers of really firstclass beers.

I have noted that some American brewers are too conservative in their business methods for this country. They want remittances to cover all orders, and are not at all inclined to ship sample lots. A little more liberality in the matter of samples and terms of payments would, no doubt, result in increased sales. It is quite safe to sell and to draw upon the bills of lading to any firms or individuals who attach to their orders a letter from their local bankers, recommending them as desirable people with whom to trade.

In regard to the packing and prices of American beers, I think I can

safely say that both are entirely satisfactory.

#### BICYCLES.

There is little or no demand for bicycles in Portuguese East Africa. There are but a few miles of hard roads in Lorenzo Marquez, and parts of these are very steep. The remaining roads are sandy, and it is an absolute impossibility to ride a bicycle over them. The only people selling bicycles here are Mr. C. Levy, of "Levy's Kiosk," and Mr. P. Antoine Callot. Mr. Callot also deals in watches, clocks, jewelry, and mathematical instruments.

In the Transvaal, there is always a demand for bicycles, and several of the leading American bicycle manufacturers are represented there

by resident agents.

When the country recovers from the present depression, which, I am convinced, will not last many months longer, the demand for bicycles will improve greatly. American bicycles are already liked, but any new firm wishing to do business in the Transvaal will have to energetically fight the competition of the American and foreign agencies already established there.

#### BUTTER.

All the butter consumed in this country is imported. The Danish and Dutch brands, in 1-pound tins, are generally preferred to the Italian and French brands in kilogram and half-kilogram tins. The duty on butter here is 100 reis (10.8 cents) per kilogram (2½ pounds); but if the duty is paid in Portuguese silver, instead of in English gold, it only amounts to about 7½ cents per kilogram.

The latest quotations for 1-pound tins of the best Danish butter are

from 2s. to 2s. 6d. (48 to 60 cents) per tin.

In my opinion, there is an opening here for the introduction of first-class American butter, packed in 1 and 2 pound tins that can be opened by a key attached to each tin, and without the use of a can opener or other similar instrument. All butter tins that I have seen upon this coast are opened by keys, upon which narrow strips of tin—soldered so as to join the body of the tin to the cover—are wound, and the top in this manner removed.

#### CORN.

The province of Mozambique is a corn-producing country and generally raises fully enough for its own consumption. Occasionally, however, the crop fails, owing to locusts or to drought, or to both, and it becomes necessary to import corn. On these occasions, the importers generally cable to their agents in the British colonies or in London and inquire where corn can be procured cheapest, and, as corn is used only for feeding Kaffirs and cattle, they buy in the lowest market, irrespective of quality. Last year several shiploads of corn were imported here from the United States and from South America. Some of the American white corn that had been shipped in slow, iron sailing vessels had heated and sweated during the long voyage and had also become infested with vermin. This corn, as a matter of course, was not accepted by the consignees, and the shippers thereof were subjected to a heavy loss.

It is generally believed that for a long voyage with a cargo of corn, a wooden vessel is far preferable to an iron one, as it is not so liable to

cause the cargo to heat and sweat.

The Banian and Arab merchants, who are the principal retail dealers in corn, all tell me that the corn crop this year in this province has been a very good one indeed. It is quite an impossibility to estimate the amount of corn consumed here, and there are no statistics showing

production or consumption in this line.

The demand for corn in the Transvaal is increasing, and the price is rising. The price of white corn at present, in bond in the custom-house, is 12s. (\$2.92) per bag of 90 kilograms (198 pounds). The leading corn merchants are Messrs. Donaldson & Sievewright, Messrs. Arthur May & Co., the Lingham Timber and Trading Company, Messrs. Hajer Dada, Abdulla & Co., and Hajer Latif Khan.

#### PETROLEUM.

The petroleum trade, or, to be more correct, the trade in kerosene oil, is entirely in the hands of about half a dozen New York commission houses. The competition between these houses and between the rival steamship lines running from New York to South Africa, is so keen that large profits are out of the question. During May and June, the price of kerosene rose to an abnormal point. Prices in normal

times are but a little more than the prices f. o. b. New York, plus the freight—which averages from \$6 to \$6.25 per ton—insurance, and sundries, and the local customs tax of 5 per cent ad valorem, payable in gold.

I am told the Standard Oil Company is contemplating establishing an agency and oil storehouse here, negotiations to that end having

just commenced.

#### STAMPED-METAL CEILINGS.

A very good trade in stamped-metal ceilings may be done here. These have lately been introduced by a few enterprising builders, and it is becoming the custom now to put them into all good houses. One of the leading merchants, who is building a house not far from this consulate, told me recently that a short while ago he wanted some metal ceiling in a hurry, and that, not having time to get it from the United States, he wired to England for it. It turned out that, although he cabled plainly for stamped-metal ceilings, his English correspondents did not know what was wanted or where such goods could be obtained. After considerable time and money had been wasted in cabling and correspondence, be finally made his English friends understand what was desired. I hope to see our trade in this line largely increased.

#### WHISKY.

There is a large and constantly increasing demand for whisky, upon this coast and in the Transvaal. Practically, everybody here consumes more or less whisky, either with quinine or without; and, in fact, whisky is considered as much of a necessity as butter, condensed milk,

tea, or coffee.

Scotch whiskies are generally preferred to all others. In the first place, the great majority of the South African population has already acquired the taste for Scotch whisky; in the second place, the Scotch whisky is good and cheap. A very good brand of Scotch whisky can be bought here, duty paid, at from \$9 to \$10 per case of 1 dozen reputed quart bottles. Good Scotch whisky—in bond—is quoted at from \$4 to \$5 per case.

The present prices quoted by the dealers in American rye and Cana-

dian club whiskies, are from \$15 to \$16 per case.

Not until the prices of American whiskies are materially reduced, and the inhabitants of southern and southeastern Africa have been weaned from their taste for the Scotch article, will there be any very great demand for American whisky.

#### STEAM COMMUNICATION.

There are now three steamship lines running from New York to this port. The New York agents are Barber & Oo., 35 Broadway; Henry W. Peabody & Oo., 58 New street; Norton & Son, 115 Produce Exchange.

#### PORT CHARGES.

Ballast.—Sand only can be procured here as ballast. It is delivered on board at the rate of 4 shillings and sixpence (\$1.09) per ton. Vessels wishing to discharge ballast can not get it taken away for much less than \$1 per ton. Vessels, however, wishing to dispose of stone ballast that can be used for road making or for building purposes, will

find a market here for it and will be able to make about \$5 per ton on its sale.

Coal.—The coal merchants here generally have from 1,000 to 2,000 tons of Cardiff or north of England coal on hand. One thousand and fifty tons of the present supply is owned by the British Admiralty.

In the eastern district, viz, the Middleberg and Belfast districts, of the Transvaal, and within a few hours by rail of this port, are extensive coal mines, and an almost unlimited supply of coal can be obtained from these sources upon a few days' notice. This coal is of very good quality and is being used by many English and German steamers trading at this port.

The price of the English coal, delivered from the hulks, is about 50

shillings (\$12.16) per ton.

The price of the Transvaal coal delivered on board is from 25 shillings

(\$6.08) to 27 shillings and 6 pence (\$6.68) per ton.

The coal merchants will not undertake to trim coal in a vessel's bunkers; this must be done by the vessel's own crew or by Kafio long-shoremen, who must be paid from 5 shillings (\$1.21) to 6 shillings (\$1.45) per day. About 30 tons of coal can be loaded per hour.

Water.—Water is plentiful and of fair quality. It is obtained from wells at the foot of the bluffs, and is pumped into large filtering and settling tanks, and from thence to a standpipe on the top of the bluffs.

This water is strongly impregnated with lime and is not used for drinking purposes when cistern rain water can be obtained. No rain water is for sale here. This well water is delivered on board by water boats, and costs 11 shillings (\$2.67) per ton of 200 English or 250 American gallons. There is no other charge for water. There is only one dealer in water, a Frenchman, who has a waterworks concession from the Portuguese Government.

Health.—The health of this place is bad. No sanitary or health statistics are at present available, but it can be safely stated that the death rate in the lower town is higher than in any other port on this coast,

the ports in the Zambesi delta excepted.

The prevailing diseases here are malarial, bilious, and pernicious fevers. A number of cases of "black water" or hematuric fever have

occurred here lately.

Steamers from Indian ports are the only vessels liable to quarantine here, on account of the "bubonic plague," and now and then the cholera, being more or less prevalent in Bombay and other adjacent ports. Vessels from around the Cape of Good Hope are never quarantined.

The charge for the visit of the health officer is 4,000 reis, or about \$2.80 at the present rate of exchange. The fee for a local bill of health

is 1,000 reis, or 70 cents.

The quarantine charge for all vessels is 10 reis per cubic meter per day, which works out as follows: 1 ton, registered=2.83 cubic meters; 10 reis=.7 of 1 cent;  $2.83 \times \$0.007 = \$0.01 \frac{9.8}{10.00}$ , or 1.98 cents per registered ton per day.

The fee for quarantine guards per day is 1,000 reis, or 70 cents; but no sailing vessel is obliged to pay more than 15,000 reis, or \$10.50, and no steamer more than 25,000 reis, or \$17.50, in full, for guards during quarantine.

Hospital.—The Government hospital takes in three classes of patients. The charges per day, exclusive of medicines, are as follows:

	were.
First class	4.500 = \$3.15
Second class	2.000 = 1.40
Third class	500 = .35

Masters of vessels are strongly advised never to allow any of the ship's company to come ashore in this port. The town contans many low grogshops, which are kept especially for sailors, and a sailor, after making the round of the dens, frequently succumbs to the bad liquor and brings up in the police station. If, however, he manages to get back to his ship, he is generally sick and quite unfit for work for several days after his visit.

#### GENERAL CHARACTER OF THE PORT.

This is the best harbor in all of South Africa. Vessels lie in the English River, which is a tidal river mainly and an extension of Delagoa Bay, and are thus in a perfectly safe and landlocked port.

The prevailing winds are from the south and southeast during the winter season, and from the north, northeast, and northwest during the summer, or rainy season. The average rise and fall of the tide here is 14 feet.

In the anchorage, there is an average depth of 6 fathoms at low water. The bottom is mud. The average depth of the various channels of Delagoa Bay is 6 fathoms at low water, but there are numerous mud banks that carry much less water, and that must be approached with caution.

#### TARIFF AND PORT DUES.

# I give below a synopsis of the customs tariff and port regulations:

#### Free list-For local consumption.

Agricultural tools and implements, n. o. s. Animals, live, excepting oxen.
Bags and bagging, hemp of Portuguese origin.
Books, printed in any language.
Carts and carriages.
Coin, gold.
Coal.
Glassware, of Portuguese origin.
Glass vessels in which other merchandise is imported.
Lines and cords for fish nets, of Portuguese origin.

Live animals, excepting oxen.
Machinery, n. o. s.
Radiway rolling stock.
Sewing machines.
Staves.
Typewriters.
Tools, n. o. s.
Tow and waste for cleaning machinery.
Vehicles, of Portuguese origin and n. o. s.
Wagons and carts.

Machinery for mines, including all iron work.

The following is the customs tariff on merchandise entered at the port of Lourenço Marquez in transit to the Transvaal, South African Republic:

Free list according to the treaty between the South African Republic and Portugal.

Ice. Lime

Maps.

All live animals.
Asphalt.
Beans, all qualities and varieties.
Boats, launches, etc., steam or sail.
Books, bound or unbound, in any language.
Charts, maps, and similar articles.
Coal.
Coin, gold and silver.
Coin, Portuguese silver and copper from Portuguese ports.
Flour, meal, etc.
Fruit, fresh.
Guano and artificial manure.
Hides and skins.

Meal.

Natural history specimens and all other specimens and articles destined for museums and not imported for commercial purposes.

Printing presses.
Seeds.
Stone and stone work for building purposes.
Tiles.
Type for printing presses.

Musical instruments.

List of articles placed upon the free list by the provincial decree published November 6, 1897.

Paintings. Belts. Pens. Buckets-galvanized iron. Photographs. Carts. Plants. Caustic sods. Potesh. Cocoanuts. Saddles Cork. Soda-bicarbonate of, and caustic soda. Glassware. Sulphur. Glue. Tiles. Metal work.

All articles not otherwise specified are subject to a transit duty of 3 per cent ad valorem.

Tariff of export duties levied in the custom-house at Lorenzo Marquez.

	Destin	ed for—		Destined for—				
Articles.	Portu- guese ports.	Foreign ports.	Articles.	Portu- guese ports.	Foreign ports.			
Peanuts and other oil seeds Sesame seeds Native woods, n. o. s. Calumba root Gums, n. o. s. Hides and skins. Tobacco, native Peppers Rubber Horns	14 2 14 2 2 2	Per cent. 2 4 2 4 4 4 4 8 8 8 8	Hippopotamus teeth	38 74 44 44	Per cent			

Other charges and taxes levied by the customs are: warehouse rent, 2,000 reis (\$2.16) per ton per month; warehouse, liquids, 5 reis (one-half of 1 cent) per liter per month.

Industrial contribution, collected for account of the town council: Upon all foreign goods not on free list, 1½ per cent ad valorem; upon all Portuguese goods not on free list, 1½ per cent per ton ad valorem; upon all goods in transit to Transvaal, 75 reis per ton, or 8 cents.

Light and buoy dues: Upon all imports for local consumption, 100 reis, or 10.8 cents, per ton; upon all imports in transit to the Transvaal, 75 reis, or 8 cents, per ton. Tonnage taxes, loaded or in ballast and paid but once in this province for each

Steamers, mail .......per net ton.. 25=\$0.027 

There are no manifest fees or stamps, or charges for translations or interpreters. The ordinary stamp charges are small, running from 1 to 15 cents, according to the nature of the documents.

## Port regulations.

The captain of the port has jurisdiction over all the waters of Delagoa Bay, and over all merchant vessels, both Portuguese and foreign, lying therein.

Consuls of foreign nations have general jurisdiction over all vessels belonging to the nations they may represent, and can take such measures as they may deem necessary to punish petty offenses and contraventions of the law occurring on board of such vessels and that do not affect the public safety or the tranquillity of the port.

All merchant vessels entering or leaving this port must hoist their national flags.

Masters of vessels contravening this rule are liable to a fine of 40,000 reis, or \$28.

Vessels having powder on board must fly a red flag from the end of the fore yard.

Vessels entering the harbor and having a clean bill of health and no sickness on board, must hoist a square blue flag on the foremast head. Vessels not having a clean bill of health or having sickness on board must hoist a square yellow flag on the foremast head.

Vessels must anchor with two anchors, and must always have a kedge ready to let go. If the captain of the port considers it necessary, jib booms must be rigged inboard.

Vessels arriving off the port at night and requiring assistance must hoist a red

light at the mainmast head

Discharging ballast or rubbish or ashes overboard in the anchorage is strictly pro-hibited. A proper place on the beach will be pointed out to all masters of vessels wishing to discharge ballast, rubbish, or ashes.

No vessel will be allowed to remain at anchor in the lower bay for more than

twenty-four hours.

Masters of vessels entering this port when visited by the captain of the port or other port officer must exhibit their registers, crew lists, and lists of passengers, and be prepared to answer in writing any questions that may be asked them.

Before sailing from this port, masters of vessels must furnish the captain of the

port with a list of the passengers leaving by their respective vessels.

Merchant vessels are prohibited from entering or leaving this port between the hours of sunset and sunrise, unless they have on board six or more passengers, or are

No vessels will be allowed to leave this port until they have received clearances

from both the custom-house and the captain of the port.

A vessel, after clearing and after receiving the final visit of the captain of the port, will not be allowed to communicate further with the shore or receive on board passengers or baggage.

#### FEES.

For entering or clearing, for each service: Vessels of not more than 283 tons register, 1,500 reis, or \$1.05; vessels of more than 283 tons register, 4,000 reis, or \$2.80.

There is no manifest fee.

License to discharge, 200 reis, or 14 cents; license to discharge or take in ballast, 200 reis; license to change anchorage, 200 reis. There are no wharfing or berthing dues.

## TUGS.

There are a number of fairly good tugs available for towing purposes at this port. Their charges, as regulated by the captain of the port, are as follows:

For each mile towed, vessels drawing up to 144 feet must pay 7,000 reis, or \$4.90; for each mile, vessels drawing from 15 to 204 feet must pay 9,000 reis, or \$6.30; for each mile, vessels drawing 21 feet and upward must pay 10,000 reis, or \$7.

#### PILOTAGE.

Pilotage is compulsory, and all vessels, with the exception of men of war, are subject to pilotage dues whether pilotage has been performed or not.

One or more pilot boats, either steam or sailing cutters, are supposed to cruise in

the lower bay and near Inhack Island.

All pilot boats are painted black with the word "Pilotos" painted in large white letters on each side, extending in height from the water line to the gunwale.

The steam pilot boats also have a large black P painted on their smokestacks, and sailing pilot boats have a large black P painted on their mainsails. In addition, all pilot boats fly a white flag with a black P in the center.

Whenever a vessel of any description has a pilot on board, the pilot flag, as above described, must be displayed either from the foremast head, or from a jack staff in

the bow.

At night, all pilot boats carry a white light on the forestay, and, in reply to signals for a pilot, will flash a white light at intervals of one minute, or a little more or less.

Vessels requiring pilots must display the following signals: By day, the national jack from the top of the foremast; or any other flag used in the merchant marine and having a white border one-fifth of the width of the flag; or the signal P T of the international signal code. At night vessels requiring pilots may burn torches or flash lights at intervals of fifteen minutes; or they may show a clear white light once a minute, or a little more or less.

In case a vessel is towed by a steam pilot boat, only the rate for towing, and no

pilotage, will be charged. In all other cases, the full pilotage charge must be paid.

#### TARIFF OF PILOTAGE CHARGES.

For entering or leaving port: Vessels drawing from 6 to 14 feet, inclusive, 1,000 reis (\$0.70) for each half foot; vessels drawing from 14½ to 20 feet, inclusive, 1,250 reis (\$0.87½) per half foot; vessels drawing 20½ feet and upward, 1,500 reis (\$1.05) for each half foot.

For shifting anchorages or general harbor work: Vessels drawing from 6 to 14 feet, inclusive, 400 reis (\$0.28) per half foot; vessels drawing from 141 to 20 feet,

Digitized by GOOGIC

inclusive, 500 reis (\$0.35) per each half foot; vessels drawing 20½ feet and upward, 600 reis (\$0.42) per each half foot.

Exceptions and discounts: Vessels having asked for and having received a pilot on board, and then not leaving the bay, must pay one-half of the regular rate for such services.

Vessels entering the port two or more times during the space of thirty days must pay the full pilotage charge the first visit, and one-half the charge the following visits.

Vessels belonging to a steamship line making regular visits, monthly or more frequently, to this port are entitled to a discount of 25 per cent from the regular pilotage rates.

#### PROVISIONS.

Meat.—At the present time, there is a great scarcity of fresh meat at this port. The "rinderpest" last year killed off nearly all the oxen in the country, and this port is now depending almost entirely for its fresh beef supply upon oxen from Madagascar. The price of fresh beef here at the present time is 800 reis (56 cents) per kilo ( $2\frac{1}{5}$  pounds). Fowls can sometimes be obtained at from 50 cents to \$1 each.

Fruit.—None is raised here, and supplies from other ports are

imported only at rare intervals and sold at exorbitant prices.

Fresh vegetables.—Imported potatoes and onions are fairly plentiful,

and are sold at from 7 to 10 cents per pound.

A few Chinamen have little plantations on the outskirts of the town, where they raise small quantities of lettuce, cabbages, radishes, etc. Their prices are always very high, say, from four to ten times as much as the prices for similar vegetables in the season in the Eastern cities of the United States.

Ice.—There is an establishment here where small quantities of artificial ice are produced daily. This is of fair quality, and is sold for from 4 to 5 cents per pound.

Respectfully submitted.

W. STANLEY HOLLIS, Consul.

LOURENÇO MARQUEZ, August 20, 1898.

Operations stopped for erection of new plant.

#### SUPPLEMENTARY REPORT.

Referring to my report of August 20, I have to advise the Department that up to the present time I have not been able to obtain as much additional information as I anticipated. This is owing in great part to political conditions, the contemplated lease of this port by Portugal to England, the change of governors, the Cape Colony elections, and the customs union lately concluded between Cape Colony and Natal.

My own opinion is that business will presently improve. There is already a disposition on the part of the financiers of the Transvaal to invest money here. Already, a quarter of a million dollars has been spent here by the Compagnic General l'Electricité, a French company. I have visited the newly completed station of this company, and must say that it is the best-equipped electric-light station I have seen in South Africa.

The buildings have all been built of hollow French brick, with iron beams and girders. Three large engines and six dynamos have been installed. All the boilers, machinery, and fittings have been supplied by the Fives-Lilles Company, of Rhone, France. Upon the iron posts that have been planted along the streets I have, however, seen the marks of an English firm. This company has a concession for fifty years to supply electricity for light and power, and also for the sale of electric lamps and fittings. The company has already contracted with the municipal chamber to maintain six hundred 16-candlepower incandescent street lamps at an annual charge of £1,700 (\$8,273.05).

The government here, some time ago, gave a Belgian syndicate a concession of fifty years to build and operate an electric street railway. On the 5th of this month (October) the Belgian consul here, who represents the holders of the concession, submitted the plans for the said railway to the municipal chamber, where they were approved and passed the same day. By the terms of the concession, work on the line must begin within nine months from October 5, 1898, and in nine months more the line must be completed and open for traffic. The plans provide for about 4 miles of the overhead-wire street-railway system. In about a month, an engineer will arrive from Belgium to make the preliminary surveys.

Although Durban, Natal, is out of my consular jurisdiction, I do not think that it will be out of place for me to mention here that the Durban town council is about to appoint a commission of two engineers to investigate and report upon the electric street-railway systems of America and Europe, in order that they may intelligently decide upon the best system to be installed in Durban.

All railway charges must be paid in English or Transvaal gold coin. In computing amounts under 1 sovereign, the railway administration have a fixed rate of exchange, which is: 20 reis Portuguese currency equals 1 penny English or Transvaal currency.

W. STANLEY HOLLIS, Consul.

LOURENCO MARQUEZ, October 14, 1898.

## STEAMSHIP LINES, RAILWAYS, AND FORWARDING AGENTS.

Consul Hollis writes, on October 28, 1898:

My last report on the above subjects was dated September 30, 1896, and published in Commercial Relations for 1895-1896, page 314, Vol. I. Since that date, there have been practically no changes in the steamship lines running to this port.

The German line from Hamburg is still running with the same vessels and with practically the same freight and passenger tariffs.

The Chargeurs Reunis and the Messageries Maritimes lines continue

their monthly steamers from France.

The two leading English lines, the Union Steamship Company and the Castle Line, are still carrying the mails and doing the greater part of the passenger business between England and South Africa. Several new vessels have been added to the fleets of these lines. The Union Steamship Company, in particular, has pursued a very progressive policy, and has added a number of fine vessels to its fleet.

The following table shows the fleet of this company as it was in 1896,

and as it now is in 1898:

Name.	Tonnage.	Name.	Tonnage.
Scot—T. 8 Norman—T. S Gascon—T. S Gaska—T. S Goorka—T. S Guelph—T. S Green—T. S Gaul—T. S Goth—T. S Mexican	7, 784 7, 587 6, 200 6, 200 6, 200 4, 916 4, 747 4, 744 4, 738	Saxon—T. S.   1898.	10, 300 10, 248 7, 818 7, 537 6, 834 6, 288 6, 288 6, 288
Mexican Moor Tartar Athenian Trojan Spartan Pretoria Arab	4, 464 4, 425 8, 882	Geni—I.S. Goth—T.S. Mexican Moor Trojan Spartan Arab.	4, 74 4, 73 4, 66 4, 46 3, 65

The mail steamers of this line, after passing round the Cape of Good Hope, come no farther north on this coast than Durban, Natal; but the slower intermediate steamers, or "G boats," as they are called from the fact that their names all begin with the letter "G," call regularly every two weeks at this port, and once a month one of these steamers goes on to Beira.

The passenger accommodations of the vessels of this line are firstclass in every respect, and surpass those on many other well-known

The "G boats" in particular are singularly steady, and it is a common occurrence for these vessels to make the thirty-seven days' voyage from Southampton to this port without even once having the "fiddles" on the saloon tables.

American business men, however, are probably more interested in

the steamship lines running from New York to this port.

The Union Steamship Company and the Clan Line, represented in New York by Messrs. Barber & Co., and the Castle Line and the Bucknall Line, whose agents in New York are Messrs. Norton & Son, have for several years maintained a fairly regular freight service from New York to this port.

Since I returned from the United States, a new and competing line composed of sundry English tramp steamers, chartered by Messrs. Henry W. Peabody & Co., of New York, has made its appearance, and at present, there is a rate war going on between this new line and the combined old lines, or "ring" as they are termed. As a result, freight rates to-day are lower from the United States than from England.

Owing to the system of rebates, discounts, and special quotations practiced by these lines, it is quite useless for me to quote freight rates

from this end of the line.

Intending shippers must go, in New York, from the agents of one line to those of the others and personally arrange their own rates. By so doing, I am of the opinion that they will not have to pay much more than \$6.50 per ton for freight upon ordinary goods shipped from New

York to this port.

There are no docks here, alongside of which large steamers can lie and discharge cargoes. Consequently, all goods must be lightered. The discharging of steamers is, at present, going on in a very satisfactory manner. There is a sufficient number of steam cranes on the landing jetties to keep cargoes in motion, and the railway management enables goods, as fast as they are landed, to be loaded into freight cars.

The discharging and landing of cargoes from steamers of regular lines is carried on by agents employed by the steamship companies, or by their agents; but cargoes from sailing vessels and steamers that are not regular in their calls at this port are landed by the agents to whom the vessels are consigned, except in cases when the agents are

not provided with the necessary equipment.

The cost of landing, in these instances, varies from 6 to 7 shillings (\$1.46 to \$1.70) per ton, according to the amount of freight being landed

at the port and the available means of discharging cargoes.

Forwarding charges, which include all charges for receiving, sorting, stacking, clearing through customs for transit, and placing on railway trucks or freight cars for the various consignees in the Transvaal, vary from 4s. 6d. (\$1.09) to 7s. (\$1.70) per ton. The firm of Messrs. De Waal & Co. is the oldest and the largest here, that devotes itself principally to landing, clearing, forwarding, and agency work. Messrs. De Waal & Co. have given me considerable information relating to the forwarding of merchandise from this port, and have advised me that in calculating the 3 per cent "transit duty," the Lourenço Marquez custom-house adds the freight to the amount of the invoice, and where no freight is declared, increases the amount of the invoice by 25 per cent.

#### RAILWAY RATES.

Johannesburg, the leading city of the Transvaal, is 396 miles by rail from this port.

The freight rates from Delagoa Bay to Johannesburg are as follows per 100 pounds weight:

Rough goods	<b>\$1.00</b>
Intermediate class	1. 21
Normal goods, R. R. risk	1. 70
8	2

Classification.—Rough goods: Ashes, asphalt, bark, bones, bricks (rough), brimstone, sulphur, charcoal, chalk, cinders, clay, coal, coke, fire clay, fire bricks, firewood, flowerpots (earthen), gravel, hides, horn; rough, cast, or pig iron; lime, limestone, manure, nitrate of potash, nitrate of soda, ores of not greater value than \$220 per ton, packing matter, including grain bags, coal bags, wool sacks; earthen pipes, plaster of paris, rags, refuse, sand, skins (dried or salted), stone (rough), slates, sleepers, straw, tiles, tufa, lumber, tar, coal.

Intermediate class: Agricultural implements, asbestus, candles, carbon in bags for electrical purposes, cement, coffee, collodion, cyanide of potassium, dynamite, fencing material, fresh fish, gelatine, girders (undamageable), guhr, griudstones, lead, machinery (undamageable), oatmeal, cast iron and cast iron pipes (undamageable), planed, tongued, and grooved lumber; wool, wagon jacks, zinc ingots, rice, soap, sugar, sheep dip, tubes and pipes, empty bottles (new), carbons, safety fuse, flour, galvanized iron

flour, galvanized iron.

Normal goods: All goods not otherwise specified.

Passenger trains leave Lourenço Marquez, Delagoa Bay, for the Transvaal every morning and evening, and make the through journey to Johannesburg, 396 miles, in twenty-seven hours.

The passenger fares to Johannesburg are as follows:

First-class	\$24.60
Second-class	19.74
Third-class	

## Distances and time by rail from Johannesburg to other South African ports.

То	Distance.	Time by rail.
Durban East London Port Elizabeth Cape Town	666 715	Hours. 27. 40 40 61

Forwarding agents: De Waal & Co., Pearson & Goddard, Wilcken & Ackerman, Hawke & Weedon, Alex Nebel.

Shipping agents and brokers: McIntosh, Findlay & Co., Allen, Wack & Co., De Oost Afrikaansche Company, Donaldson & Sievewright, Martin Budd.

Messrs. Wilcken & Ackerman are the agents of the Henry W. Peabody Steamship Line from New York.

Under date of November 4, Mr. Hollis sends the following copy of a letter by Alexander Nebel, forwarding agent:

## FORWARDING FREIGHT AT LOURENÇO MARQUEZ.

Landing.—On all goods shipped to this port, the landing charge—7s. 6d. (\$1.82)—is payable with the freight, and the steamship companies have fixed contracts with the local lightering companies who deliver the freight from the steamers' sides to the wharf.

But if goods are shipped by sailing vessel, the landing charges are payable here, and the consignees or their agents are at liberty to make special arrangements with any boating or lighter company to land their goods, provided, of course, that the shipment makes at least a lighter load of 75 tons. The rates for landing in such cases vary, according to the nature of the goods, from 4s. to 6s. (\$0.97 to \$1.46) per ton.

Cranage.—Goods weighing not more than 1 ton apiece are usually discharged at the pier close to the custom-house—the lighter companies paying the cranage—and from there are taken charge of by the forwarding agents.

If, however, goods are heavier, or if a shipment consists of heavy machinery of If, however, goods are heavier, or it a snipment consists of neavy machinery or more or less of the above weight, it is preferable to discharge the goods at the railway or "Netherlands pier," as it is called, where they are taken from the lighters by cranes and placed straight into the railway trucks.

The cranage charges at the Netherlands pier are as follows: For packages weighing less than 1 ton, 4s. 6d. (\$1.09) per ton, less 2s. (48 cents) refunded by the lighter companies, making the net charge 2s. 6d. (61 cents), as per following table:

#### Railway cranage charges.

	(	Charges.		li	ght	fund by ering eany.	Net charges.		
Packages weighing less than— (Ine ton	\$. 4 5 7 10	<b>d. 6 0 6 0 6</b>	\$1.09 1.21 1.82 2.43 2.79	8. 2 2 8 4 5	d. 0 0 6 6	\$0.48 .48 .85 1.09 1.21	2. 2 3 4 5 6	d. 6 0 6 6	\$0.61 .73 .97 1.34 1.58

It is much easier for the lighter companies to discharge cargo at the Netherlands pier than at the custom-house jetties; therefore the refunds, as stated above, are allowed. For freight landed from sailing vessels, special charges are arranged, according to the nature of the cargoes.

Customs charges.—The transit duty charged at this port is 3 per cent ad valorem on the amount of the invoice, including the charges for freight, commission, etc.; or, if the latter charges are not stated, 25 per cent is added to the invoice value of the goods instead. There are many articles, however, on the free list.

Harbor and other dues on transit goods amount to about 7 pence (14 cents) per ton. The loading into freight cars is done by the Delagoa Bay Railway, which charges

6 pence (12 cents) per ton for fine freight and half that amount for rough goods.

Agency.—My work as forwarding agent consists of receiving from the lighters, sorting, clearing at both Portuguese and Transvaal customs, and weighing, for which I charge as follows per ton: 4 shillings (97 cents) for general assorted merchandise; 3 shillings (73 cents) for special "big lines" in truck loads of 10 tons; 2s. 6d. (60 cents) for goods landed at the Netherlands pier—cranage to be paid extra.

Besides the above mentioned charges, there remain bank charges—exchange and cash outlays; 5 shillings (\$1.21) for each entry, and railway charges and Transvaal

customs duties.

## MADAGASCAR.<sup>1</sup>

This island seems to have experienced its share of the general depression in business, the reduction here having been caused in a great measure by the increased tariff rates on goods coming from countries other than France.

#### COTTON GOODS.

The trade in cotton goods was active up to April, 1898, the past year, I am credibly informed, being one of the best American cottons have enjoyed for some time. More than 6,000 bales have been received since January 1, 1898, but much of this was sent out in anticipation of a higher tariff.

There will always be more or less trade in American cottons, since they are well and favorably known and wanted by the natives, but the immediate future of the trade is not bright for two reasons, namely:

First. The duties are now such that French cottons can compete, the rates being between 50 and 60 per cent of their value.

Second. By indirect methods, the colonial authorities have so impressed the natives that it is with difficulty they are induced to buy any cloth but French. I am reliably informed the native merchants in the interior of the island are forbidden to sell cloth of English or American manufacture.

Several friends at Tamatave aver that they must tear off the American trade-mark from their cloth in order to sell it down the coast. Yet when I call on these same firms for something more tangible in reference to the matter, the invariable reply is: "Well, Mr. Consul, you know we are Frenchmen, and it would do us no good to make a deposition of this."

#### CHANGES IN TARIFF RATES ON COTTON GOODS.

A glance over the following table will show the changes in the tariff rates on cotton goods:

Comparison between the old and new tariffs on cotton goods for Madagascar (on goods from countries other than France).

	Oi	d system.		New system.			
Weight.	Number of			MULLION OI			
	threads per 5 millimeters.	Francs.	U. S. coin.	threads per 5 millimeters.	Francs.	U. 8. coin.	
13 kilos or more * {	27 and less 28 to 35	62 97	\$12.96 18.72	35 and less 36 and more	77 118	\$14.86 22.77	
11 to 13 kilos	27 and less 28 to 35	70 108	13. 51 <b>2</b> 0. 84	35 and less 36 and more	87 131	16. 79 25. 28	
9 to 11 kilos	27 and less 28 to 35	90 140	17. 37 27. 02	35 and less 36 and more	111 172	21. 42 83. 19	
7 to 9 kilos	27 and less 28 to 35 27 and less	107 175 129	20, 65 83, 77 24, 89	35 and less 36 and more 35 and less	131 230 139	25. 28 44. 39 26. 83	
5 to 7 kilos	28 to 35 27 and less	212 230	30. 91 44. 39	36 and more	800 287	57. 90 55, 39	
3 to 5 kilos	28 to 35	399 620	77.00 129.66	36 and more Less than 3	550 620	106. 15 129. 66	

<sup>&</sup>lt;sup>1</sup>1 millimeter = 0.001 meter or 0.0894 inch.

It will be seen by the foregoing table that for goods of 27 threads and less or 36 threads and mere the new tariff is heavier, but for goods from 28 to 35 threads (which is the general quality for long cloths and other fancy goods) the tariff is less. For American and English gray goods, which are of 27 threads and less, the new tariff is higher.

Practically no drills are sold in Madagascar, and there has yet been no disposition to depart from the standard weights and marks; in fact, this is so true that some enterprising French firms, encouraged by the discriminating tariff, have hitherto limited themselves to imitating the standard weights sent out by American firms. I am informed that they have not confined themselves to imitating weights and measures, but have even gone so far as to mark their goods in imitation of well-known copyrights.

I would add that the general weight of sheetings used on the east

coast is the 3-yard sheeting, and on the west coast the 3.25.

The 30-inch goods (or shirtings) have a certain demand, as well as those in the ordinary standard weights.

<sup>&</sup>lt;sup>2</sup>1 kilo = 2.2046 pounds.

#### PETROLEUM.

The petroleum trade has not increased in volume. It is more profitable to send it to Zanzibar, the Indian ports, or to Mauritius, where it is sold to small dealers who ship it in smaller quantities to this island.

The methods of illumination employed by the natives are very primitive; the majority use no light at all.

#### SUNDRIES.

As regards boots and shoes, the natives do not wear either; and the European population is not sufficient to warrant a hopeful outlook in this line at present.

There is a moderate demand for furniture, lamps, clocks, and watches (of a cheap grade), canned goods, medicines, hardware, tools, etc.

I am of the opinion that butter put up in 3 or 5 pound pieces in cloths and then in pickle, or any other method of preservation suitable for this climate, would be profitable. If not hitherto attempted, it is worth the trial. The butter used here comes from France, Italy, and Denmark, and is of medium quality, put up in small tins weighing from ½ to 1½ pounds and retailing at from 60 to 75 cents per pound. The same may be said of eggs, which sell from 36 to 48 cents per dozen.

The lack of an American firm at this place dealing in staples other than cotton, renders it very difficult to obtain information as to the market for many articles of American manufacture.

## DECREASE OF TRADE.

The decrease of the trade in the island is marked, and is probably due, in a measure, to the radical changes effected in the customs and habits of their new subjects by the colonial authorities.

In the olden days, the wealth of the Hovas was reckoned according to the number of cattle and slaves owned by them, and being skillful traders, commerce was in their hands. These Hova masters, many of them, frequently did not see their subjects during the year, the system of bondage being feudal in its character. The slaves would devote their time to attending the cattle and gathering the principal products of the island, such as rubber, wax, rafia fiber, gold dust, and hides, which were brought to the centers of commerce for export.

When the new government assumed control of the island, it abolished slavery only to place the natives in a condition of serfdom. They are pressed into the "Farnompoana" or free government service, a system by which men and women are put to work on the public roads. The result is a scarcity of native produce for the export trade, and an increase in the price of commodities. The price of rice, the chief food of the natives, has increased 50 per cent because they are compelled to work in the government service, instead of cultivating their rice fields as formerly.

## CABLE, TELEGRAPH, ETC.

The cable service is unreliable, by reason of its many interruptions. The telegraph system of the island is being extended and much improved. The public roads in the interior have been greatly increased and improved throughout the island. They have not heretofore been used except for government transportation.

Most of the small rivers intersecting the country between Tamatave and Antananarivo are being bridged, which, together with the improvement of the roads, will shorten the time between here and Tananarivo,

the capital.

In my report of September 2, 1898, I sent a prospectus of the railway now in process of construction. The section from here to Ivondro is being pushed as rapidly as the character of the labor and topographical features of the country will admit. The lagoons are being joined in the construction of the Pangolanes Canal to Andevorante.

#### LICENSES.

Wholesale merchants pay 400 francs (\$77.20) per year; merchants with an insurance agency pay 1,000 francs (\$193) per annum. There are no special taxes on commercial travelers. Those coming from countries other than France must deposit an amount covering the duties on their samples, which, I am informed, is returned to them upon their departure from the island.

#### PASSPORTS.

The regulations as to passports affect Frenchmen and foreigners alike. The following questions are submitted: (1) Whence the traveler comes, (2) his nationality, (3) his profession, (4) his destination, (5) his business on the island.

### PACKING AND FREIGHT RATES.

It is charged here by local merchants that the packing of products by Americans is faulty, the covering frail, and hence the goods are not in good condition on arrival. French and English goods are much better packed.

Rates are unchanged, with the exception of those of the Compagnie Charguers Reunis, which have been reduced 50 per cent to Havre and Bordeaux, with an extra charge of 15 francs (\$2.90) for reshipment to

Marseilles and London.

#### TONNAGE DUES AND QUARANTINE.

There are no tonnage dues. All vessels except the Messageries Maritimes must pay a sanitary due of from 1.50 francs (29 cents) to 40 francs (\$7.72) according to tonnage.

There are no quarantine regulations whatsoever.

## MARKING OF GOODS.

To avoid tax, goods from France must be accompanied with certificate of origin. There are no regulations as to marking of goods.

Infringements of French trade-marks are zealously prosecuted.

## CHANGES IN CONSUMPTION TAX.

By decree of May 7, last, the following articles are subject to the consumption tax of 1 per cent:

All alcohols, 120 francs (\$26.16) per hectoliter (26.418 gallons). Common wines of 14° and less, 5 francs (\$0.96) per hectoliter.

<sup>&</sup>lt;sup>1</sup>Printed in Advance Sheets, No. 256, October 25; Consular Reports, No. 219, December, 1898.

Wines and liquors more than 14°, 15 francs (\$2.90) per hectoliter, not including interior tax of 1 per cent.

Champagnes, per bottle, 50 centimes (\$0.096).

Mousseaux wines, per one-half bottle, 25 centimes (\$0.048). Ciders, per bottle, 10 centimes (\$0.019). Beer, per hecteliter (26.418 gallons), 5 francs (\$0.96).

Beer, per bottle, 10 centimes (\$0.019).

Liqueurs, per hectoliter, 30 francs (\$5.79); per bottle, 50 centimes (\$0.096).

Opium and gunpowder, 10 francs (\$1.93) per kilo (2.2046 pounds).

Firecrackers and fireworks, 10 francs (\$1.93) per kilogram.

Cloths of all kinds, 3 per cent of their value.

Tobaccos: Leaf and plug, 1 franc (\$0.193) per kilogram; cigars and cigarettes, 6 francs (\$1.15) per kilogram; other kinds, 2 francs (\$0.38) per kilogram = 2.2046

Petroleum, 10 centimes (\$0.0196) per kilogram net. Benzine, slate, 10 centimes (\$0.0196) per kilogram net. Matches, 3 francs (\$0.57) per kilogram net.

Playing cards, 20 centimes (\$0.038) per pack.

#### COMMERCIAL CREDITS.

Oredits depend largely on the standing of the firm. Reliable business firms receive from three to six months' credit at 6 per cent interest.

Colonial companies organized in France for exploiting the French colonies have agents here who take orders from individuals, as well as local merchants, from 10 francs (\$1.93) upward, and give unlimited credits at 6 per cent with renewal on one-fourth payments.

#### CHANGES IN PASSENGER RATES.

The Messageries Maritimes have made the following reductions in the passenger rates to and from Marseilles:

	Old.		New.	
	France.	U. S. coin.	Francs.	U. S. coin.
First class	915	\$236. 42 176. 59 88. 78	1, 075 755 400	\$207.47 145.71 77.20

## CURRENCY.

The total amount of currency in circulation, according to an estimate of the director of the Comptoir National d'Escompte de Paris, is about 40,000,000 francs, or \$8,000,000.

The 5 franc piece of the Latin Union is the local unit. There are also some 6,000,000 francs in "cut money," which are not in circulation.

The rate of exchange has fluctuated somewhat since the war, and is at present 5 francs, or 96 cents, on the dollar.

#### SPECIAL DESIGNS, PATTERNS, ETC., OF GOODS.

Measurements and other peculiarities of manufactured fabrics receive more attention from European manufacturers than from American, the former sparing no pains to acquaint themselves with any special or characteristic requirement.

The Hova will purchase a 40-yard piece of cloth, but can not be persuaded to buy at reduced price a 38-yard piece, for the reason that the smaller piece cuts to a disadvantage in making "lambas," the chief dress of the native.

 $\mathsf{Digitized}\,\mathsf{by}\,Google$ 

## MEANS AND TIME OF COMMUNICATING WITH UNITED STATES PORTS.

Communication with United States ports is difficult and expensive. Freight must pass through France or England. By the most direct route, the shortest time required to reach Tamatave from United States ports will vary from thirty to fifty days, the former with close connections at Paris and from Marseilles via the swamers of the Compagnie des Messageries Maritimes. Other French and the English lines require a month. The English Castle Line transfers at the Cape, rendering the time rather uncertain. Sailing vessels require from one hundred to two hundred days.

### HOW TO INCREASE AMERICAN TRADE.

A have no doubt that a well-assorted invoice of American products would be well received, and if sustained by a local agency would greatly

stimulate trade, notwithstanding the high tariff duties.

I had hoped to receive certain other information of a statistical nature from the authorities at Tamatave and from various other ports on the island, but have been disappointed. I hope to forward it by the next steamer as a supplementary report.

M. W. GIBBS, Consul.

TAMATAVE, October 3, 1898.

#### SUPPLEMENTARY REPORT.

I inclose such supplementary data as I have been able to secure through official and other sources. Several parties to whom I have applied for certain information have thus far failed to reply.

M. W. GIBBS, Consul.

TAMATAVE, October 18, 1898.

Translation of decree of governor placing vessels in coast trade under French flag.

ART. 1. From January 1, 1899, navigation in the coastwise trade in the boundaries of Madagascar and dependencies will be reserved exclusively to vessels flying the French flag.

ART. 2. Owners and captains who desire their vessels to be benefited by the advantages of regular enrollment under French protection, should comply with the dispositions of the local decree 940 of August 28, 1898.

Certain vessels, moreover, may be authorized to fly the French flag without hav-

ing obtained a French protection (regular) by fulfilling the conditions prescribed by the ministerial circular of November 25, 1895, namely: One-half at least to be owned by Frenchmen, and the boat to be commanded by a captain who is a French citizen or subject.

ART. 3. These last named vessels, in order to be authorized to join the navigation, either in the coastwise trade or as schooners, should be furnished with a special permit for navigation and with a crew list which will be delivered to them by the

maritime authority of the port of registration.

ART. 4. Only schooners of more than 25 tons may be equipped. Coastwise navigation is that which goes from one point to another of the island or between the island and one of its dependencies situated in sight of the shore. Small coasting trade includes the coasts of the island and its dependencies, as well as trips between these coasts and the neighboring islands subject to French rule (Mayotte, Reunion, etc.).

Large coasting trade includes the coasts and the islands situated upon the seas which extend from the Cape of Good Hope as far as and including the islands of the

channel.\*

## IMPORTS AND EXPORTS OF MADAGASCAR.

I inclose a few additional statements which have just come to hand, showing imports and exports from the orincipal ports of Madagascar for the calendar year 1897.

M. W. GIBBS, Consul.

TAMATAVE, November 18, 1898.

<sup>\*</sup>NOTE BY BUREAU OF FOREIGN COMMERCE, MARCH 16, 1899.—Consul Gibbs sends from Tamatave, under date of January 18, 1899, translation of a decree by the governor, provisionally repealing the law forbidding foreign vessels in the coastwise trade of Madagascar.

### MADEIRA.

The island of Madeira is situated between 32° 37′ and 32° 49′ north latitude and 16° 31′ and 17° 16′ west longitude. It is 38 miles long from east to west and about 13 miles in breadth. A central or dividing range of mountains runs the entire length of the island. The highest peak attains 6,000 feet, and the average height of the range is more than 4,500 feet. The mountains influence the climate, and consequently the vegetation of the island. The fruits and grain of Europe and America are cultivated to an elevation of 2,600 feet above the sea level, whilst the vine and sugar cane, as well as tropical fruits, grow on the lower grounds, where the climate is genial and the soil stronger. The supply of water for the crops depends entirely on irrigation, as during the summer months no rain falls on the island. A portion of the heavy rains that fall during the winter months is stored on the mountain sides, and from these the water is distributed during the summer through stone channels called "levadas." Some of these leva-

das are 50 and 70 miles long, carrying water in a zigzag way from the northernmost part of the island to the southernmost. Wherever water can be carried, crops can be grown. Water is the most valuable property in Madeira. As a rule, levadas are owned by corporations, but the longer ones are owned by the Government. These are under the control of the minister of public works, an officer appointed from Lisbon.

The population of Madeira, by the last census, was 140,000, and the island is assumed to have an area of 300 square miles. A large portion of the surface is unfit for cultivation. Above the 2,600-foot line is the region of the bilberry, heath, and broom, and it is too barren and exposed for the production of grain. This constitutes fully one-third of the island, and a large portion of the remainder is either barren rock or too precipitous for tillage, so that probably not more than one-half the island is in actual cultivation. The wonderful fertility of the island is shown by the fact that 150 square miles support a population of 140,000, a population more dense than that of Belgium, the most dense country of the continent of Europe, where there are 485 persons to the square mile; this, too, without a sufficient water supply, and with the most rude and primitive utensils for cultivation.

Funchal, with a population of 36,600, is the capital of the island, and is the third city in Portugal. Being a health resort for all Europe, it is supported almost entirely by foreigners. The Portuguese Government has at last recognized this, and has abrogated most of the laws that discriminated against the stranger. The passport system, so long in vogue, has been annulled, and persons coming here to stop for some time can bring with them, free of duty, household wares, such as linen, silver, etc., or these can follow their owners within a limit of thirty days,

provided they show signs of use.

The annexed tables will explain themselves. The export tables do not give America a fair rating. As we have no regular direct line of steamers from here to America, our exports are shipped via England, and are placed by the customs to the credit of that country. Exports to America are put down at \$549.91, when, as a matter of fact, our invoices show exportation to the value of \$6,715.88 for the quarter ended December 31, 1897. The value of \$549.91 was shipped direct to New York by the Portuguese Peninsular Line, that touches here only when bringing cargo to the island. The export of eggs to South Africa has developed, and is remarkably large for this island. About 30 tons were exported in 1896, and between 500 and 600 tons in 1897. The bulk of these went to Johannesberg. As a direct line of steamers has been established between New York and Cape Town, our people should get a large portion of this trade. The Madeira eggs are bought here in the market at \$2 per 100, and are sold in Johannesberg at \$10.

I wish to call attention to the embroidery industry; the increase of exports in this line, over last year, is 25 tons. The bulk of this has gone to England and Germany, these countries having agents here that buy

the work.

T. C. JONES, Consul.

FUNCHAL, July 25, 1898.

## MAURITIUS.

#### DEPRESSION IN SUGAR INDUSTRY.

Consul Campbell writes from Port Louis October 29, 1898:

Apropos of previous reports relative to the critical position of the sugar industry of Mauritius and the continuous depression of the finances of the colony, in consequence of the existing state of affairs, I now inclose copies of twe petitions on this question—the one forwarded to the Queen and the other to the Viceroy of India.

Lately, there has been a sentiment in favor of annexation of this island to the government of India.

#### PETITION TO THE VICEROY OF INDIA.

The humble petition of the undersigned planters, merchants, and others occupied and interested in the cultivation of sugar canes and in the manufacture and sale of sugar in Mauritius sheweth:

1. That the cultivation of sugar cane and the manufacture and sale of cane sugar are practically the sole industries of the inhabitants of Mauritius, and that their welfare and even their livelihood depend upon the remunerative sale of the sugar produced.

2. That the sugar industry directly or indirectly gives employment and the means of subsistence to a population of about 380,000, of whom more than 260,000 are Indian

immigrants or immediate descendants of natives of India.

3. That these Indian immigrants have come to Mauritius with the sanction and under the control and protection of the Imperial and the Indian governments, secured by laws suggested, approved, or imposed by both governments, and that therefore the Imperial and Indian governments are jointly responsible with the government of Mauritius for the welfare and means of subsistence of themselves and their descendants. their descendants.

4. That, in addition to the Indians and Indo-Mauritians employed on sugar estates under indenture or temporary verbal contract, a very important and yearly increasing proportion of Indian immigrants and of their descendants have purchased small landed properties, which they cultivate chiefly in sugar cane and also partly in vegetables and other agricultural produce.

5. That this class is already so numerous and important, that it is estimated that between one-fourth and one-third of the total sugar crop of the colony is produced from canes cultivated by them and sold by them to sugar factories, while a very considerable proportion of the vegetable food consumed by the colony is also due to

their industry.

6. That the system of peasant proprietors strongly recommended by the West Indian royal commissioners, which the Imperial Government is trying to carry out at great cost in the West Indies, already exists and is extending in Mauritius; but so long as the price of sugar remains unremunerative, the advantages expected from the system can not be obtained, as experience has proved that, owing to its distance from suitable markets, Mauritius can not produce and expert other articles than

7. That the principal outlet for the sugar produced by Mauritius is India, the more so as the much greater distance from European and American markets places it at a disadvantage when competing on those markets, even under conditions otherwise equal, against West Indian or South American sugars; and Mauritius has practically lost the markets of Australia, which some years ago took nearly one-half of its sugars, because Queensland and New Zesland (with the assistance of the money and the credit of their government and of protective import duties) New South Wales, and Fiji, which is close to Australia, are producing more sugar than the Australian consumption.

8. That rice and other cereal provisions, a large part of the chemicals for agricultural purposes, gunny bags for packing sugar and other articles used in connection with the manufacture of sugar, are imported from India.

9. That the larger proportion of the export and import trade of Mauritius is thus

carried on with India.

10. That in consequence of the export bounties given by foreign governments, beet sugar can be sold below its cost price, and is competing with unfair advantage against the sugar of Mauritius on the markets of the world, and threatens not only to exclude Mauritius sugar from the Indian market, but to cause the rapid diminution and the possible ultimate extinction of the sugar industry in Mauritius.

11. That the loss of the Indian markets and the consequent large diminution and

possible ultimate extinction of the sugar industry would entail great and growing misery and sufferings on the inhabitants of Mauritius and its large Indian population, and would throw a very heavy responsibility on the Imperial and Indian gov-

ernments.

12. That the large reduction in the sugar crop of Mauritius of last year, caused by an exceptional drought and aggravated by the very low price of sugar; the high price of cereals during the Indian famine, which has weighed heavily upon the planters who have to feed their laborers and cattle; the plague in Bombay and Kuratchee which, for the third year, is seriously disturbing the sugar trade, have entailed upon the colony in general and upon planters heavy losses which they can not recoup so long as the price of sugar remains so low; and that Mauritius is in consequence suffering from serious financial difficulties and its public revenue is

alarmingly decreasing.

13. That your petitioners are convinced, like the West Indian royal commissioners and the Right Hon. Mr. Joseph Chamberlain, secretary of state for the colonies, that the abolition of bounties would contribute to the revival of the sugar industry in the British colonies and would help Mauritius to carry on the cultivation of the sugar cane and the manufacture of sugar with less disadvantage, when competing,

on fair terms, with beet sugar.

14. That failing the consent of foreign governments, the imposition of countervailing duties in India on sugars having received bounties, which were established last year by the United States of America, and which are now declared by Mr. Chamberlain and by many other high authorities to be in accordance with the true principles of free trade, would certainly lead to the speedy abolition of those bounties, and this conviction is shared by the British delegates at the Brussels conference.

15. That the chambers of commerce and of agriculture of upper India have, since the beginning of the present year, asked those engaged in the sugar industry in Mauritius to further the efforts which are being made against the bounty system, and to urge the levy of a countervailing duty on beet sugar in India, in the more than probable event of the conference to be held at Brussels failing to bring about the

total abolition of bounties.

Wherefore your petitioners humbly and earnestly pray that your excellency in council may be pleased to take this petition into favorable consideration and not allow the ruin of Mauritius and of its large Indian population to be accomplished by the continued competition of bounty-fed sugar, and they humbly beg strongly to support the prayer of the sugar producers in India that, in the event of bounties not being abolished, the Indian government may raise countervailing duties on the importation into India of all sugars having received bounties, in the same manner as has been done by the United States of America.

a. Your petitioners further beg respectfully to submit that some time ago financial requirements induced the Indian government to raise a customs ad valorem duty of 5 per cent on imports, including sugars, whether of British or of foreign origin.

b. That the establishment of countervailing duties by the United States last year has diverted to the Indian markets a large proportion of the bounty-fed sugar excluded from America; and the import of excessive quantities of such beet sugar into India renders the supply greater than the demand, and has the effect of lowering prices so much that the import duty which, under normal circumstances, would have been borne by the Indian consumer practically falls heavily upon the Mauritius producer, who, receiving no direct or indirect assistance, can not, like his foreign competitors, sell his produce below cost price without incurring more or less heavy

Wherefore your petitioners earnestly pray that your excellency in council, in consideration of the exceptional fact that nearly three-fourths of the inhabitants of Mauritius are native-born Indians or immediate descendants of Indians, and that the larger proportion of the trade of Mauritius is with India, be pleased to grant, by special favor, that sugars duly proved to have been bona fide grown and manufactured in Mauritius, be exempted from the payment of customs duty on their

importation in India.

The Indian government need not fear that foreign sugars may be smuggled into India through Mauritius. In order to prevent such possible frauds, at the time when duties on foreign sugars existed in Great Britain, a high customs duty was enacted on the import of all sugars in Mauritius. The enactment, though useless now, as no sugar is imported into Mauritius, has not been repealed, and is still in force, and that duty might be increased if the government of India wished it.

Value of the exports of sugar declared at Port Louis, Mauritius, for the United States during the year ended June 30, 1898.

## MOROCCO.1

My predecessor, in his report last year on the trade of Morocco, said that the total value of imports to Tangier for the year 1896 was 41 per cent less than in 1895 and some 20 per cent less than 1894. The past year (1897) has not altered these conditions, as, according to the table of statistics transmitted herewith, there has been a falling off of imports of nearly 20 per cent. This can be attributed to the gradual rise in the rate of exchange. During the first six months of this year, the rate of exchange has been even worse.

The imports into Tangier, which amounted in 1897 to nearly \$1,500,000, or about 10 per cent less than in 1896, were divided as follows: Great Britain, 54½ per cent; France, 28¾; Germany, 13¾, and all other countries, 34. As there have been no American vessels coming to this port, or any direct communication between the United States and Morocco, the name of the United States does not appear in the returns. Whatever American goods reach Morocco must pass through foreign ports, principally London, Hamburg, and Gibraltar.

I would state that, owing to the great difficulty in obtaining statistics, I have made use of figures obtained by the English Foreign Office. The Moorish customs officials keep nothing in the way of statistics.

<sup>&</sup>lt;sup>1</sup> In reply to circular of August 5.

#### IMPORTS.

The principal article of import is a class of cotton goods, most of which comes from Manchester, and is called in England "Domestic." In Morocco, the Moors know it by the name of "Americano." The cost here is 5 to 7 shillings (\$1.21 to \$1.70) per piece of 24 yards length and 30 inches wide, weighing about 5 pounds; \$571,000 worth of it was imported during 1897, or more than 10 per cent less than in 1896. Some few years ago, a merchant here imported some cotton stuffs direct from America, but found that he could not compete with the Manchester firms. Most of the cloth imported comes from Germany. My predecessor reported last year that formerly the English held this trade, but that of late, the Germans had been shipping large quantities to Morocco. This condition still obtains.

During the year 1897 about \$170,000 worth of flour was imported to Tangier, principally from France. This flour is not as good as the small quantity of American flour which comes via Gibraltar; however, the American flour is more expensive and is used mostly among the foreign population.

Cotton-seed oil is brought from England, and most of it, I believe, is of American origin. Olive oil is imported from Spain. Another kind of oil, called "Argan," is made in the southern part of this country by the Moors, and is used for household purposes.

Most of the silk imported comes from France and Italy and finds its way to Fez, the capital of Morocco, where it is made up into clothes for the Moors, particularly for women.

Sugar is imported from France and Belgium. Seventy thousand dollars worth was imported into Tangier last year, or 20 per cent less than the year before.

Most of the tea that is imported into Morocco comes from England, \$53,000 worth being imported last year, or only about half as much as the year before.

The tobacco that was imported during 1897 came mostly from Hamburg and Gibraltar. Some of that from Gibraltar is of American origin. Altogether, \$51,000 worth was imported, or 12 per cent less than in 1896.

#### EXPORTS.

The chief articles of export are eggs, goatskins, hides, oxen, and Moorish slippers, but the only articles which are shipped to the United States are goatskins, hides, and a very small quantity of Moorish curios. Corlander seed, opium, and such drugs are exported from the coast towns to England, and some eventually find their way to the United States.

About \$260,000 worth of oxen were shipped to Gibraltar, Malta, and

Spain last year.

Over \$200,000 worth of goatskins and hides were shipped from Morecco to the United States, during the fiscal year ending June 30 last. The demand for them has been larger than heretofore, and it is thought that next year's output may be even greater. France and the United States take most of the goatskins that are exported; Italy and Germany, a few. There are more skins shipped from Mogador than from Tangier, but the Tangier skins are considered better and cost a little more. At present, they are worth about 68 shillings (\$16.52) per hundred weight. I have been told by a merchant here, who exports skins to America, that, with the exception of one house, American

importers do not allow their agents in Morocco credit, while nearly all the French importers advance their agents the necessary money with which to buy skins.

#### CURRENCY.

The money that is used in Morocco consists entirely of silver—Spanish and Moorish. The Moorish Government has its money coined in France and Germany, and it is worth about the same as Spanish, although during last spring, it was worth 12 per cent more. The table of exchange (inclosed) shows that since January, 1897, until quite recently the rate has been gradually getting worse. This is due to the fact that the rate of exchange here is governed by that of Madrid. Business men claim that this is one of the greatest drawbacks to business in Morocco. The rate of exchange is at present \$1.50 Spanish to \$1 American, or  $7\frac{1}{2}$  pesetas to \$1 American.

### TARIFF RATES AND CUSTOMS RULES.

All articles imported into Morocco must pay a duty of 10 per cent ad valorem, with the exception of silk, the duty on which is fixed at 5 per cent. Such things as firearms or munitions of war are not allowed to be imported into Morocco, except for the use of the Moorish Government.

Under an agreement the Moorish Government has with the foreign governments represented here, exporters have to obtain a permit in order to ship cattle and grain, which, however, does not reduce the amount of the tax to be paid. Each legation or consulate is allowed for its citizens a permit for 6,000 head of cattle and 500 fanegas of wheat and 800 fanegas of barley.

Vessels anchoring in this port, if under 200 tons, are required to pay \$2.40 anchorage; if over 200 tons, \$2.40 for the 200 tons and 2½ cents for every additional ton. Moorish lighters must be used in embarking or discharging cargo. There are no wharfage dues. The only improve-

ment in harbor facilities consists of the jetty recently finished.

#### COMMUNICATION.

During the past year, there has been no extension of telegraph and cable service. The Eastern Telegraph Company is the only company represented in Morocco, and Tangier is the only town in which it has an office.

The transportation facilities remain the same. Mr. Burke, in his report last year,<sup>2</sup> called attention to the fact that not only did no American vessels touch in any port in Morocco, but that no vessels touch

here going to or coming from the United States.

As there are no railways, canals, or river systems in Morocco, the merchants here are compelled to use camels, horses, and donkeys for transporting merchandise to and from the interior and the coast towns. This is necessarily slow work, and sometimes it takes more than two weeks to bring goatskins or other merchandise from Fez to Tangier, a distance of only 200 kilometers (124 miles). There have been no

<sup>&</sup>lt;sup>1</sup> A full fanega equals 118 pounds. <sup>2</sup> Commercial Relations, 1896-'7, Vol. I.

changes in caravan routes. Owing to the lack of direct steamship lines from Morocco to the United States, exporters generally ship from Tangier, Casablanca, and Mogador by way of London. By this route, it takes anywhere from six weeks to two months for goods to reach the United States. Occasionally, shipments are made by way of Gibraltar or Marseilles, which takes less time, but is more expensive. The freight rates have remained the same during the past year. At one time, one of the steamship lines tried to increase the rates, but was not successful in doing so. The rate from here to the United States via London on goatskins, which is the principal article of export, is about 55 shillings (\$13.36) per ton.

### TAXES, ETC.

No licenses for carrying on business are required in Morocco; but in the interior, people who send merchandise from one town to another have to pay a small tax of 10 cents per camel, 5 cents per horse, and 2½ cents per donkey, which is called a gate tax.

Commercial travelers are not required to have passports nor are there any regulations relating to them. It is, however, customary for all who make a trip into the interior to take with them a government sol-

dier, besides other attendants.

Morocco has no merchant marine, and does nothing in the way of protecting commerce. The only light-house in Morocco is supported

by the foreign governments represented here.

Quarantine regulations are made by the "conseil sanitaire," which is composed of foreigners, mostly members of the diplomatic corps. Its principal object is to prevent the pilgrims from bringing the plague with them on their return from Mecca. A number of Moors go every year to the above-named place, and all vessels that bring these returning pilgrims to Morocco have to submit to quarantine, if requested. The conseil sanitaire also has the power to place any vessels entering Tangier in quarantine.

There are no laws or regulations of a discriminating character that affect American vessels. It is not necessary for goods to be marked to

show country from which they come.

There are three post-offices in Morocco, English, French, and Spanish, with branch stations among the coast towns. Rates are as follows: Sealed letters not weighing more than one-half ounce, if sent abroad, 25 centimos (5 cents); locally, 10 centimos (2 cents). Postal cards, 10 centimos if sent abroad, local, 5 centimos; newspapers and other printed matter, 5 centimos per 2 ounces.

S. R. GUMMERE, Consul-General.

TANGIER, October 21, 1898.

## Steamship companies touching at Tangier.

Papayanny line of steamers (British): Regular service between Liverpool, Tangier, Malta, and Alexandria, calling at Tangier about every twelve days.

Mersey Steamship Company, Limited (British): Regular steamers between London,

Gibraltar, Tangier, and the coast towns.

Blands' Steamers (British): Running between Gibraltar and Tangier. Compagnie de Navigation Mixte (French): Between Oran and Tangier.

Compagnie Paquet (French): From Marseilles, Gibraltar, to the coast towns and Canary Islands.

Oldemburg Portugiesische (German): Monthly steamship service between Ham-

burg, Antwerp, Gibraltar, Tangier, and the coast towns.

Woermann Line (German): From Hamburg, Antwerp, to the Canary Islands and West Coast of Africa. The Sloman Line (German): From Hamburg to Tangier, Malaga, Barcelona, and

Italian ports

The Royal Netherlands (Dutch): From Amsterdam, Lisbon, to Tangier, Gibraltar, and Italian ports.

La Ligure-Brasiliana de Genova (Italian): Regular line between Tangier and the Brazilian ports. Departures from Tangier every month.

Compania Trasatlantica Espanola (Spanish): Daily service between Cadiz, Tangier, Algeciras, Gibraltar and back, carrying the mail; also another steamer running between Barcelona and the coast towns monthly.

## SUPPLEMENTARY REPORT.

Under date of January 14, 1899, Consul-General Gummere sends reports from the agents at Casablanca and Mogador, on commerce and industries, for the year 1897, as follows:

### CASABLANCA.

I transmit reports and returns on trade, commerce, and shipping for

the year 1897:

Trade with the United States is small, according to these returns. While it is actually much larger than shown, the major portion of coriander seed exported from here goes finally to the United States, but being invoiced to other countries is credited to them. The same may be said of goat skins, of which large quantities are invoiced to Marseilles, thence transshipped to the United States. All the petroleum consumed here is originally from the United States, but coming as it does in ships of other nations, it is generally accredited to those countries. For want of cheaper freights and better service, the United States is heavily handicapped in introducing its goods into this part of Morocco.

Prospects for the coming crops are all that can be desired. in a month earlier than usual, and the farmers, being in better circumstances than usual, commenced to plow early.

After seven consecutive years of the locust plague, this season was

comparatively free.

J. Cobb.

CASABLANCA, November 22, 1898.

Rates of freight between different countries and the port of Casablanca, Morocco, 1898.

Between Hamburg and Casablanca: Woerman Line, freight on heavy goods per ton weight, 17.50 marks (\$4.17); freight on light goods per ton measurement, 30 marks (\$7.14).

Oldenburg Line between Hamburg and Casablanca: Same as Woerman Line.

Mersey Line between London and Casablanca: Freight on heavy goods per ton
weight, 17 shillings 6 pence (\$4.26); freight on light goods per ton measurement, 30

shillings (\$7.30).

Spanish subsidized line: Freight from Cadiz to Casablanca per ton, 30 france and

10 per cent (\$5.79); freight from Casablanca to Cadiz, 16.50 francs (\$3.18).

Digitized by GOOGLE

Spanish Haynes Line: Freight is mostly by special arrangement, but averages between Casablanca and Gibraltar 15 pesetas (\$2.90) per 1,000 kilos (2,204.6 pounds). French line between Casablanca and Marseilles: Freight between Casablanca and Marseilles, from 2.50 to 5.50 francs (48 cents to \$1.06) per 100 kilos (220.46 pounds) for weight, and for measurement 25 francs (\$4.83) per cubic meter (35.3166 cubic feet).

Transportation facilities of different countries with the port of Casablanca, Morocco, 1898.

English line of steamers, Mersey Steamship Company, Limited; agent in London, Forwood Bros. & Co.; agents in Casablanca, Murdoch, Butler & Co. At present, these boats sail from London weekly and after touching at the Morocco coast ports, they proceed to the Canary Islands, filling up there with bananas, tomatoes, etc., and thence go direct to London without calling at the Morocco coast ports on the return voyage. Sometimes after leaving the Canary Islands they call at Madeira and thence go direct to London. The weekly sailings are sometimes altered to once in ten days, according to freight offering. Time occupied on voyage, London to Casablance, sight days Casablanca, eight days.

Spanish subsidized line of steamers; agent in Casablanca, Mr. Adrubau. Sailing from Cadiz once a month, calling at Morocco coast ports both on outward and return voyage. Cadiz to Casablanca, three days' voyage.

Spanish Haynes Line of steamers; agent in Casablanca, Mr. Lapeen. These boats sail from Gibraltar, calling at Morocco coast ports, but there is no regular service or fixed sailing date. Time occupied on voyage, Gibraltar to Casablanca,

German line of steamers, Woerman Line; agents in Casablanca, Messrs. Brandt & Toel; sailing once a month from Hamburg, sometimes calling at Antwerp. These steamers after calling at the Morocco coast ports proceed to the Canary Islands, and thence go south to ports on the west coast of Africa. On the return voyage, two boats a month call here. Time occupied on voyage, Hamburg to Casablanca, twelve days. Oldenburg Line, German; agent in Casablanca, C. Lamb. Boats sail from Hamburg on the 15th of each month, calling at Antwerp, which port they leave on the

20th. These boats call at all the Morocco coast ports, but do not go to the Canary Islands or to the West African ports. Time occupied on the voyage, sixteen days. French line of steamers; N. Paquet & Co., Marseilles; agents in Casablanca, Mr. Canepa. Sailing from Marseilles twice a month—on the 7th and 22d. These boats,

when freight offers, call at the Canary Islands, but when there is no inducement they simply go down the Morocco coast ports and return the same way to Marseilles. There are other boats in this line, which make additional sailings when there is a pressure of freight. Time occupied on voyage Marseilles to Casablanca, seven or eight days.

General return of shipping at the port of Casablanoa, Morocco, for the year 1897. ENTERED.

#### MOGADOR.

In furnishing the following statistics, I would explain that, notwithstanding the most careful estimate, they are only approximately correct. They have been collated from ships' manifests, which contain very scant information.

There are no laws affecting trade-marks. Natives are almost the only buyers of imported goods, and as very few of them can read their own language, marks, numbers, and names in a foreign language are superfluous. However, an article got up in a showy manner attracts attention.

The great hindrance to the further development of American trade

at this port is undoubtedly the want of direct communication.

There are no laws respecting commercial travelers. They do not require passports, and can travel into the interior as far as Morocco City with safety, but they would be prevented going south of this port into Sus, where the Sultan's authority is only of a nominal character.

There is no discriminating tariff which would affect American vessels. The treaty secures to citizens of the United States all the privileges

accorded to other foreign subjects.

There ought to be an opening for American windmills, for pumping water from wells and for boring new ones; also for plows and sickles, and a few other agricultural implements, but it would require enterprise among American manufacturers and merchants to get these articles exhibited to the natives and teach them how to operate them.

G. BROOME.

MOGADOR, December 21, 1898.

Exports of Mogador in 1897.

# ST. HELENA.

I submit the following statistics and general summary of the trade of this colony:

#### IMPORTS.

The imports for the year 1897 (all local government statements are made up for the calendar year) amounted to \$171,825. The principal countries of origin were:

United Kingdom	15, 36 <b>5</b> 12, 755
United States. Cape Colony.	9, 350 8, 045
Total	

Beyond this special importation from our country, viz, \$9,350 for account of the colonial government, there is no record of direct imports from the United States, though it is evident that no inconsiderable portion comes indirectly from that source, such as flour, tobacco, Indian corn, kerosene, provisions, etc. In the absence of any reliable data, however, no correct estimate of the values can be arrived at.

The following is a list in detail of all imports during the year 1897:

Articles.	Quantity.	Value.
UNITED KINGDOM.		
Animals (horses)number	1	\$250
Beer (duty paid)hogsheads	622	14, 470
Beer (duty paid)dezens bottles	7281	1, 390
Boatsnumber	1 12	125
Beef and pork (probably all American)barrels	259	4, 355
Cement and limedo	64	125
Chemicals and drugspackages		1. 41
Cigars (duty paid)pounds		80
Coalstons	300	1.75
Drapery and dry goodspackages	284	19, 60
Barthen and glass waredo	45	1, 23
Explosivesdodo		. 8
Flour (probably all American)dodo	622	3, 31
Grain seeds etc. (probably partly American)do	592	2, 32
Hardware, lead, etc. (probably partly American)do	246	2, 61
Hardware, lead, etc. (probably partly American)do Leather, boots and shoes, etc. (probably partly American)do	32	1, 69
Marine stores, paints, oil, tar, etc. (probably partly American)	198	99
Machinery (probably partly American)		98
Margarine (probably partly American)	10	190
Meal, preserved (American)		2, 58
Musical instruments	4	370
Oil, kerosene (American)	16	50

a Special for the colonial government, via Cape Town.

The following is compiled from custom-house returns, showing nature and values of imports from the United States between the years 1891 and 1895, at which latter date the direct-trading vessels between New Bedford, Mass., and this port ceased running, being unable to longer obtain return cargoes of whale oil and bone, owing to the collapse of the American whaling business in this ocean, on account of the competition of mineral and vegetable oils and the general depression.

## Detailed list of imports from the United States 1891-1895.

Articles.	Quantity.	Value.
Chemicals, drugs, etc	62	\$340
Chemicals, drugs, etcpackages Ootton and dress goodsdodo	67	2, 105

Grand total		24, 965

### TRADE.

Independently of the withdrawal of the direct trading vessels on the ground of no return cargo, I regret to say it has been represented to me that, owing to the inferiority of flour, salt provisions, lard, etc., brought on these vessels, and culpable neglect as regards executing indents, the merchants here have been compelled in self-defense to transfer their orders to London, Australia, and Cape Colony. This, however, appears to the writer to be a matter which might easily be remedied and confidence restored, by correspondence between merchants in New York or Boston and the principal firms here.

With the view to trying to restore the lost direct connection between this island and the United States I prepared and forwarded circulars (copies herewith) to the leading mercantile and farming people of the island, but regret to say that, whether from the universal depression which undoubtedly obtains among the entire community (consequent upon a succession of misfortunes which closely followed the almost complete annihilation of the shipping supply business, as the result of the opening of the Suez Canal and the substitution of steam for sailing vessels) or a general desire to preserve the utmost reticence on all matters affecting their special lines of business, the attempt has well nigh proved a failure. I do not yet despair, however, and I am greatly encouraged from the fact that two important trade factors are now brought before us, namely, the resolve of the British war department to augment the present garrison from 400 to 750 men in the near future, which must largely increase the circulating medium; and what I con-

sider of far greater importance to the general interests of the island, the statement that the Imperial Government has decided upon laying an "all British submarine cable," with the following connections: Penzance, Cornwall, England, to Gibraltar, 1,200 miles; Gibraltar to Sierra Leone, 2,400 miles; thence to Ascension, 800 miles; Ascension to St. Helena, 800 miles; St. Helena to Cape Town, 1,800 miles; total distance, England to Cape Colony, 7,000 miles. The Telegraph and Maintenance Company's steamship John Pender has been engaged in making the necessary soundings, having left Cape Town on May 12 and arrived here May 19. After sounding around the island, it left on May 25 for Ascension, Sierra Leone, Gibraltar, and England. The connection by cable with the "mother country" will be the greatest boon ever conferred upon St. Helena, for the reason that hundreds of merchant sailing ships from the East, which under existing arrangements go out of their way to call at the Brazils, Cape Verde, and the West Indies for orders, will avail themselves of this station, St. Helena being situated in the heart of the southeast trade winds, and consequently in the direct track of ships from India and China bound to the continents of Europe and America.

The cable will also doubtless be a strong incentive to invalids to take advantage of the delightful climate of this island, where English is the only language spoken, in preference to foreign Madeira and the Canary Islands, which, owing to their proximity to Europe, and cable and mail facilities, have so long held a monopoly as health resorts. At present, we have but one mail every twenty eight days, but we may reasonably hope that the cable and increased garrison will change all

these things for the better.

Regarding St. Helena as a new health resort, it is only right to mention that the rainfall for 1897 was about 30 inches (mostly during June to September); that the mean average temperature for the year in Jamestown was 73° and in the rural districts 62°, and, as mentioned in another part of this report, the death rate was but 11.49 per thousand, and this included deaths of invalids from calling ships. Telegraphic and telephonic communication is established throughout the island.

#### PRODUCTS AND INDUSTRIES.

This island produces very excellent coffee, but not sufficient for export to any extent. Capital is needed, and so is the proper sort of labor, not only for cultivation and extension of the plantations, but also for gathering, drying, hulling, and otherwise preparing the bean for market. In London, it has been pronounced equal to Mocha, and there is no better to be found anywhere.

New Zealand flax grows wild. Attempts have been made to extract the fiber by machinery imported from England, but with only partial success. A considerable quantity has been shipped to London, but owing in a great measure to want of cheap transportation for the raw material, this industry has been abandoned until this can be remedied,

and values become more encouraging.

It is now in contemplation to renew attempts to extract fiber from what is commonly known here as the American aloe, which can be grown anywhere on the island. The fiber being of much finer quality, and not nearly so difficult of manipulation as that of the New Zealand flax, the promoters of this industry feel sanguine of ultimate success. Attempts have been made at silk culture and fish curing for export,

but these failed for want of capital and the half-hearted way in which they were undertaken.

Mulberry trees, the food of the silkworm, grow luxuriantly, and

ordinary cactus, the food of the cochineal, is very abundant.

In the eastern division of the island, there is a considerable deposit of black oxide of manganese. An attempt to collect and export this mineral was also made some years since (one shipment going to Great Britain), but failed to cover expenses, owing to inadequate means of transportation to the point of shipment. The other products of the island are potatoes, sweet potatoes, yams, green vegetables and fruit, cattle, sheep, goats, horses, asses, poultry, hay, and a limited quantity of grain. The only notable industry at present is the making of fancy articles in seedwork, disposed of to passing strangers as island curios.

#### SHIPPING.

The shipping arrivals at the island, during the year ended December, 1897, were as follows:

Nationality.	Number.	Tonnage.
British	85 8	173, 600 8, 712 46, 257
Total	147	228, 569

A number of vessels called off the port, either to signal for postal communication or for medical aid, or were communicated with by boatmen for exchange of stores for vegetables, but these are not officially classed as arrivals. The number of American vessels arriving between July 1, 1897, and June 30, 1898 (fiscal year), was 7, of the aggregate tonnage of 7,999.

#### CHARGES.

No port charges of any description are levied upon vessels calling for water, stores, medical aid, etc.; vessels with cargo for or taking cargo from the island pay dues of 25 cents per ton on actual quantity landed and shipped. Fresh water is delivered to shipping out of sailing tank boats, equipped with force pumps. The island abounds in fresh water springs to the known extent of 212, and new supply and drain pipes are now being laid for increased delivery.

### COAL SUPPLY.

A supply of steam coal is constantly kept on hand, to meet the requirements of the British admiralty, who oblige the contractor to always have a reserve of 1,000 tons. Additional stock is also kept to meet casual demands.

# Customs tariff.

Sheen, goata, niga, calvesdo	. 25
Heavy articles and goods not enumeratedper 112 pounds	. 06

# BANKS, CURRENCY, WAGES.

The only banking establishment on the island is the Government Savings Bank (guaranteed). No deposit exceeding \$500 is permitted to any one person. The rate of interest allowed is 2½ per cent, and six months' notice is required for withdrawal of principal. Balance due to depositors on December 31, 1897, was \$81,215.

The currency is British, and all payments are made in coin, but foreign money is also taken at valuation. Exchange on the United States is at the rate of \$5 to the pound sterling.

The present rate of wages is, say, 84 cents per day for mechanics and 60 cents for laborers.

#### CENSUS.

The population, according to the census taken in 1891, including the garrison and crews of shipping in port, was 4,116; estimated population December 31, 1897, 3,897. Many persons have emigrated to the Cape and Natal colonies during the last two decades, consequent upon the hard times in the island since the opening of the Suez Canal.

The number of births registered in 1897 was 125, or 32.07 per 1,000 of population; deaths, same period, 44, or 11.29 per 1,000 of population. The annual taxation per capita is, say, \$5.50.

## ENUMERATION OF CATTLE, ETC.

The number of horned and other cattle, in 1891, and at present, is:

	Bullocks.	Sheep.	Goats.	Pige.	Horses.	A 8808.
Stock in 1891. Estimated present stock.	1, 139	3, 115	929	231	126	927
	1, 200	2, 400	650	300	150	1, 000

When the seasons are favorable, the island is capable of sustaining 1,700 head of cattle. There is now an available stock of hay estimated at 300 tons.

## REVENUE, ETC.

The revenue of the island for 1897 was \$44,013; expenditure, same period, \$65,021; public debt, being loan from the Imperial Government, upon which no interest is payable, \$25,590 or, say, \$6 per capita. The unusual excess of expenditure over revenue for 1897 is accounted for by the purchase in England, importation, and laying down by the colonial government of new and larger fresh water and drain pipes from the springs to Jamestown.

#### IMPROVEMENTS.

Since my departure from the island in 1886, several important changes have been effected in the local government establishments. There is a marked all-round improvement in the Civil and Seamen's Hospital, which has been completely reorganized in accordance with modern hygiene, and has three trained English lady nurses. Ambulances have also been imported from England.

The post-office has been renovated, is now in the postal union, and every facility is afforded the public in the matter of post-office orders,

parcel, sample post, etc.

An attempt is being made to found a museum, and for this, the island is indebted to the governor; also for vast improvements in the public gardens, with the addition of fountains, and increased number of street lamps throughout the town, which are lighted by kerosene, as there are no electric or gas plants on the island.

The supreme court is presided over by the governor, assisted by assessors chosen from the members of the legislative council. There is no chief justice. The lower courts are under supervision of a stipen-

diary magistrate, assisted by honorary justices of the peace.

There is a Protestant Episcopal cathedral and four other Episcopal churches. The staff consists of a bishop and four canons. There is also a Baptist church and pastor and a Roman Catholic church and priest.

#### EDUCATION.

There are several ordinary schools for boys and girls, but the training is strictly elementary. There are no colleges or technical schools or gradings from elementary into higher schools, and in the absence of the latter the children of the better classes, as a rule, are sent to Europe for the higher education. The schools are mostly, and in some cases wholly, supported by grants from the colonial treasury, and are consequently under supervision of the local government.

ROB. P. POOLEY, Consul.

St. HELENA, June 30, 1898.

#### Copy of Circular No. 1.

UNITED STATES CONSULATE, St. Helena, March 26, 1898.

Solomon & Co., W. A. Thorpe & Sons, Fowler & Co., T. Jackson & Co., R. Galbraith & Co., Thatcher & Co., T. Adams, G. S. Bell, G. Liddy, R. Henry, W. H. Marriott, J. George, Royal Engineers and Garrison Canteen, St. Helena.

GENTLEMEN: Having been requested by certain business firms in the United States to make inquiry as to imports into this island, with the view of increasing

exports of various goods and merchandise from America, I would feel greatly obliged for such information as you may be able and disposed to give me, relative to the following goods as regards local consumption, namely, quantity and quality, and whether it has been customary to import such goods direct from the United States or through other countries, and if there has been any material falling off in these imports. I would thank you to state cause of decline, with any suggestions you may deem pertinent to the matter, which in your opinion would conduce to the revival of trade in this colony.

Flour: In barrels and half barrels. Corn: In bulk or [and] packets.

Indian corn: In sacks or barrels, kiln-dried or for seed products, such as corn meal,

maizena, hominy, canned sweet corn.
Salt provisions: Beef and pork in barrels and half barrels, hams, bacon, butter,

cheese, beef hams, etc.

Lumber: White and yellow (or pitch), spruce, and cypress pine in boards and scantling-dimensions.

Kerosene: In boxes of 10 American gallons, and casks of 40 gallons.

Tobacco: Leaf and plug, with number of heads to the pound. Beer: In barrels, hogsheads, and bottles.

Rum: In barrels, hogsheads, and bottles.

Florida water: In cases of 1 dozen, and in cases of 4 dozen small bottles.

Canned goods: Meats, vegetables, fruits, etc. Cotton-seed oil: In bulk or bottles.

Lard: In kegs or tins, 20, 10, 5, and 2\(\frac{1}{2}\) pounds. Cottolene: In tins, 20, 10, 5, and 2\(\frac{1}{2}\) pounds (beef fat and cotton-seed oil).

Herrings: Small wood boxes. Codfish: Half barrels or drums.

Beans: White and brown, half barrels.

Furniture: Bedroom, dining room, and drawing-room suits, rockers, tables, chairs. bentwood, windsor, etc., sofas, lounges, bureaus, in oak, ash, mahogany, veneer, or stained wood.

Organs: Cabinet, drawing-room, and church.

Pianos: Grand, semigrand, cottage, etc.

Hardware: Machinery, tools, agricultural implements, lawn mowers, and garden hose; sewing machines, bicycles, stoves (coal and kerosene), wire nails, locks, hinges, screws, etc., scales and weights, coffee and pepper mills, machinery.

Oars: Ash, 12 to 20 feet.

Cotton cloth: White and gray shirting, sheeting, and long cloth, thread and spool cotton, hosiery, calico or printed goods, muslins, corsets, etc.

Boots and shoes: Average sizes and description. Lamps and lamp ware, sieves, clocks and watches, nests of trunks and pails, patent medicines, perfumery, garden seeds, grindstones, kitchen and for general use.

Soap: Yellow, perfumed, sapolio, pearline.
Brushes and brooms: Corn, coir, hair, etc.
Matting: China, India, and coir matting, clothespins.
Sundries: Printers' and photographic supplies, anthracite coal, billet wood, glass, crockery, tin and iron ware and utensils, knife and ironing boards, washboards, and wringers.

Meal: Linseed and cotton meal.

Milk: Condensed, Eagle and other brands.

Sugar: Refined and unrefined. Molasses: New Orleans. Cordage: White and tarred.

Canvas, etc.: Cotton, duck, and sail twine.

Candles: Stearin. Tar: Pitch and resin. Paints and paint oil.

Oakum: One-half-hundredweight and 1-hundredweight bales.

Safes: Iron, key, and combination.

Wire: Steel, copper, and iron barbed fencing. Iron and steel: Rod and bar, hoop, piping, nail pullers.

Oilcloth: Linoleum and burlaps for bagging Refrigerators, beehives, coffee and corn shellers. Wheels and handbarrows and store trucks.

Axes, hatchets, and spades. Cement: Roman, Rose, Portland. Bricks: Building, fire, and bath.

Step-ladders. Wines: Californian. Guns: Sporting. Incubators.

Powder: Sporting, and baking and washing soda. Crackers: Biscuits and fire.

Blacksmiths', farriers', tinsmiths', painters', and plumbers' supplies, etc., with any other articles suggested by yourselves.

In conclusion, I may state that prior to leaving New York I was approached on the matter of assorted export cargoes to St. Helena, and it would afford me the greatest pleasure in my official capacity, and with your cooperation and assistance, to be the means of reestablishing the late trade between this port and the United States.

Respectfully, yours,

ROB. P. POOLEY, Consul.

## Copy of Circular No. 2.

CONSULATE OF THE UNITED STATES, St. Helena, March 26, 1898.

Solomon & Co., W. A. Thorpe & Sons, Fowler & Co., R. Galbraith & Co., Thos. Deason, Lewis Bros., H. Weston, H. B. Morris, L. Knipe, G. N. Moss, St. Helena.

GENTLEMEN: For statistical purposes, and in connection with my reports on commercial relations of the United States and this colony, I respectfully request you will be good enough to furnish me with information in reply to the following interrogatories, namely:

1. What is the approximate total acreage on your farm and adjacent lands and other lands owned or hired by yourselves, and with amount right of commonage?

2. State portion of land under cultivation, with nature and average quantity per

acre of all produce.

3. State number of horned cattle, sheep, goats, horses, mules, and donkeys which the pasture lands and common is capable of sustaining; also the actual number at present depastured, and the number of milch cows stalled for dairy purposes only, with nature of food supplied the latter, and average yield of milk per cow.

4. Is the land at present under cultivation capable of sufficient grain for stall feeding slaughter oxen and sheep? If not, please state description and quantity of feed imported for that purpose, and whence it comes.

5. Does indian corn, cotton and linseed meal, oil cake, or either, form a consider-

able item in your imports? If so, please state, approximately, value and place of origin, and by what means conveyed; if from the United States, whether direct or via England, and what proportion from other countries.

6. What is your opinion as to the outlook for increased importation of indian corn and other feed from the United States?

7. Is corn used for human food? If so, to what extent and in what form, or is its use confined to cattle and poultry?

8. Are American farming implements exclusively used on your lands, also dairy utensils, or in what proportion? State your opinion as to their respective merits as compared with those of European make.

9. To what extent are coffee, beets, Swedish turnip, and indian corn at present grown on the island; what is the outlook for increased production, and would Amer-

ican coffee and corn hullers find favor in this colony?

10. In what condition is fruit cultivation and what is the future outlook?

11. What was the export of St. Helena-grown wool in 1897, and to what point?

12. Can you state approximately the total of horned and other cattle and animals herein described on the island, with the proportion each of those used solely for agricultural purposes f

13. State briefly the general agricultural outlook.

14. Any further information as regards agricultural and horticultural matters would be highly interesting and thankfully acknowledged.

Respectfully, yours,

ROB. P. POOLEY, Consul.

#### SUPPLEMENTARY REPORT.

Complying with directions contained in departmental circular dated August 5, 1898, I submit report on commercial relations (in addition to the facts and figures for the year ended December 31, 1897, already transmitted under date of June 30, 1828) of my consular district, for the six months ended June 30, 1898.

It will be observed from the foregoing, that there have been no direct transactions between this island and the United States during the first six months of the present year, though doubtless no inconsiderable portion of the imports from Great Britain and the Cape Colony is derived from American sources of produce and manufacture, as indicated in table, and in this connection, I am in a position to state that our tools, hardware, farming implements, and machinery (under common designation as "hardware"), Indian corn, grain, white pine and cypress lumber, furniture, linseed and cotton-seed meal, oilcake, kerosene in cases, denims, prints, calicoes, clocks, lamps and lampware are much preferred, as to quality, finish, and durability, to like productions of other countries, and I am persuaded that a limited direct trade in all the above-named goods would prove highly remunerative to any American merchant disposed to engage in the venture.

A powerful searchlight is being placed upon Munden's battery, at the entrance of and commanding the entire approach to the roadstead, sweeping the horizon from Sugar Loaf Hill on the east side to Southwest l'oint westward, and in November next, the garrison is to be augmented by the addition of two companies of West India troops, bringing the strength up to 400 infantry (black) and two batteries of Royal Artillery (white) and 50 native sharpshooters, say 650 to 700 men in all. It is in contemplation to replace all obsolete artillery by breech-loading

guns.

I am unable to gather any satisfactory information on the subject-matter of the closing paragraph of the departmental circular, for the reason that no cotton textiles are manufactured in this small colony. Dealers order goods from England by pieces, limited to so many yards each (in length, and not by weight). The width is about 30 to 36 inches for prints, calicoes, denims, and drills, and 60 to 90 inches for sheetings, but I can not state definitely the number of picks to the inch, warp, and number of yards to the pound. The fact is, the question, although submitted to dealers in terms of the circular, is apparently not understood, the trade being worked by rule of thumb at St. Helena; consequently I have failed to elicit any reliable response.

The number of American vessels which called at this port for the six months ended June 30, 1898, was 4, representing a tonnage of 4,450.

Imports from the United States during the year ended June 30, 1898.

There were no exports to the United States during the year.

ROB. P. POOLEY,

Consul.

St. Helena, September 22, 1898.

C R-VOL 1-17

# SIERRA LEONE.

The present year, 1898, has not been favorable for trade development here, owing to the recent disturbances with natives in the Hinterland,

or protectorate of Sierra Leone.

This war between the British and the natives, with its consequent destruction of life and property to an extent unparalleled in the annals of West African history, has had a direful effect on the general tone of business throughout this consular district. Not only is the depression visible in the ordinary channels of retail, but in every phase of the barter trade as well.

The Hinterland merchants and traders were supplied by the Sierra Leone importers, and in the devastation which followed the Mendi war, there was hardly one retail establishment left in that vast and densely populated country, where previously there were hundreds doing a thriving business. All African products for the export trade in this district are the result of native or aboriginal labor, upon which the industrial activity of the colony depends; therefore, any circumstance which interferes with the equanimity of the native labor, upon which this colony has depended for its existence for so many years, checks the productive forces of this community.

In the recent outbreak, the native has been on the warpath instead of on the farm; hence the diminished supply of cola nuts, palm kernels, ginger, hides, etc., for export. This temporary stagnation of business has very materially emphasized the importance, to the well-being of Sierra Leone, of industries dependent not upon primitive, but upon

intelligent and educated, labor.

The present state of affairs can not last. New energies and enterprises are formulating themselves for the future development of Sierra Leone and its Hinterland. Already, the chamber of commerce and other business organizations are discussing ways and means by which to extend their spheres of trade, in a way that will satisfactorily advance the interests of this colony. The consensus of opinion here is that the conditions caused by the recent disturbances will not only be transitory, but will mark the beginning of a period of great industrial and commercial activity, preceded, of course, by the permanent occupation by British forces, and opening to settlement and trade of the territory which has but recently been the scene of aboriginal hostility and disorder.

The maxim that trade follows the flag is fully realized in business circles here, and the colonial authorities are lending their energies to facilitate the early settlement of the territory in question.

### AGRICULTURE.

The agricultural movements, so successfully inaugurated by Governor Cardew and the legislative council of Sierra Leone, are replete with encouragement for the development of the colony. Indeed, these undertakings have received such impetus by public sanction, that their realization is no longer speculative, but assured.

The agricultural department of the colony maintains, besides a botanical garden, an annual agricultural fair, which is patronized with some

degree of success and enthusiasm.

<sup>&</sup>lt;sup>1</sup> In reply to circular of August 5.

The Government has perfected arrangements for the education and training, under competent instructors, of a number of native youths in agriculture, horticulture, and economic botany of tropical countries. This, together with the recent but successfully established school of technology, points unmistakably to the dawn of a new era in the colony's progress.

#### INDUSTRIES.

An ice-factory plant is in course of construction, and will be opened in a few months. This will, when in successful operation, create a demand for ice-cream freezers and other apparatus of American manufacture, for dispensing carbonated or aerated waters.

An electric light plant is being discussed, and with the completion

of the enterprises already inaugurated, will possibly be erected.

The first electrical display from an established plant, used in connection with the fortification works recently finished, gave general satisfaction. Its effect will no doubt hasten the introduction of electricity in Sierra Leone, both as light and motive power.

#### TRADE.

With the continued development of the agricultural resources of the colony, agricultural implements, tools, and machinery will take their

places with other imports.

When I look at the meager trade returns between the United States and the West African coast, and consider the opportunity afforded not only to develop but to maintain our trade against the competition of the world, I am fully persuaded that our exporters and manufacturers are not aware of the importance of this market for unlimited supplies of canned goods, salt beef, salt pork, flour, lumber, kerosene, edge

tools, cotton textiles, boots, shoes, and other articles.

The total amount of imports into Sierra Leone for the year 1897 was \$2,221,704.08. Of this amount, \$131,395.96 was imported from the United States; \$1,837,142.23 represents the total value of imports from Great Britain; \$29,203.72 from the other British colonies; and all other foreign countries, embracing principally Germany, France, Spain, and Portugal, contributed \$223,964 in imports. It will be seen that the United States, with no regular direct steamship line to this port, has sold more than half as much as all the other foreign countries combined. The total value of exports for the same period was \$1,950,238.28. Of this amount, the United States received, according to the records of the colonial office, \$74.12; Great Britain, \$919,502.30; British colonies, \$142,266.89; and all other countries, \$888,394.96.

During the first six months of the present year, from January to June, 1898, Sierra Leone imported from the United States to the value of \$49,879.12. The exports for the same period, consisting of hides,

amounted to \$2,077.80.

## TRANSPORTATION.

Great Britain, France, Germany, and Spain have regular steamship lines to Sierra Leone, and there are occasional steamers from the other European countries. The United States is much behind in this respect, only sailing vessels paying occasional visits.

The British and West African Steamship Company has recently launched another vessel in Liverpool for the West Coast service, with

improved passenger accommodations. The tendency now in the steam-ship service between Sierra Leone and Liverpool is to gradually replace the slower by faster and more efficient vessels. This may be taken as an indication of the future prospect for business with Sierra Leone and the sister colonies of the West African coast, the trade of which has been so long overlooked.

The United States needs direct steamship communication with the

West Coast. With this established, the field is ours.

#### RAILROAD AND TELEGRAPH.

The work upon the Sierra Leoue Railway, which was stopped by reason of hostilities, has been resumed. This leads into the rich Hinterland from Freetown. Twenty-six miles have been completed, and 22 miles have daily service.

A Government telegraph connects Sierra Leone with the outside

world.

# BANKING FACILITIES.

The principal bank of Sierra Leone is the Bank of British West Africa (Liverpool), capital £100,000. The institution here, as in all of the other colonies of the coast, is a branch of the above institution. It does a general banking business, buys and sells bills of exchange.

#### GENERAL.

I have intermingled freely with the business men and trade organizations here, and find a unanimous preference for American goods. They desire to trade with us, if we will furnish regular steamship service between the United States and the colonies of the coast, so as to enable them to get their orders direct.

JOHN T. WILLIAMS, Consul.

SIERRA LEONE, October 31, 1898.

# SOUTH AFRICA.

The following information in regard to trade in Cape Colony, Natal, etc., has been compiled from a number of reports sent by Consul General Stowe, of Cape Town.

<sup>1</sup>Under date of January 26, 1899, Acting Consul Trice sends through the Department letters to business firms in the United States, giving advice as to the development of trade. He says, in substance:

For the successful extension of American trade in West Africa men are needed who are willing to give their personal attention to the requirements of this coast. The British and other firms already established here might be induced, by proper representation, to deal more largely in American produce and manufactures. To insure the best results exporters should be personally represented; but it would be more profitable to establish American firms here capable of maintaining a supply of American goods adequate to the demand. There is now but one American firm in Sierra Leone (Messrs, Yates & Porterfield, of 19 William street, New York), and by their efforts the enormous demand for American goods all along the coast has been created. There is an increasing demand for a direct line of steamers to America. Trade alliances will not be made, nor will American trade be greatly extended until more rapid transit has been established between the two countries.

# CAPE COLONY.

## TRANSIT TRADE OF CAPE COLONY.

# The transit trade was conducted through the various ports as follows:

Port.	1897.
Cape Town. Port Elizabeth Rast London Other ports and stations	\$1, 421, 22 15, 475, 82 6, 194, 74
Rast London	6, 194, 743 144, 039
Total	23, 235, 829

This table includes goods under rebate, goods free of duty, and goods under which no rebate is allowed.

<sup>&</sup>lt;sup>1</sup> From a report dated July 22, 1898.

The goods in transit were forwarded to the following countries:

South African Republic	\$21, 197, 805
Matabeleland, Mashonaland, etc	2, 029, 827
Orange Free State	4, 395, 145
Rhodesia	569, 205

The increase of goods in transit to Rhodesia amounts to over 42 per cent for the year.

# EXPORTS OF WOOL, HIDES, ETC. 1

Exports from Cape Colony in 1896-97.

#### WOOL.

Year.	Quantity.	Value.
1896	Pounds. 90, 922, 727 73, 873, 336	\$9, 112, 522 7, 284, 075

The United States received of this, in 1897, 1,944,712 pounds, all scoured.

African wool, says Mr. Stowe, has to compete with that of South America, and wool exporters here are urging the growers to assort their wools and prepare them better for export. Statistics compiled from London show that the fleece loses in favor every year, as the cleaning is so imperfect.

#### ANGORA HAIR.

a From an estimate prepared by the Department of Agriculture, it seems that the deaths from rinderpest between September, 1896, and April, 1898, amounted to 401,250 in Cape Colony. Other causes contributing to the diminution in numbers were lung aickness, red water, and drought.

#### PETROLEUM.

Notwithstanding the war and the increased price of paraffin oil, says Mr. Stowe, the importation has not materially fallen off in 1898. Considerable interest has been aroused by the alleged discovery of oil-bearing shale in Rhodesia, and I clip from a newspaper an article on that subject:

For the past twenty years, well-authenticated instances of deposits of oil-bearing shale in the Orange Free State, Griqualand West, and elsewhere have occurred, and in 1889, a company having a large capital, was floated with a flourish of trumpets to work some alleged oil-bearing ground in the Orange Free State, only to end in disaster when it was found that the oil was conspicuous by its absence. In Natal, also, traces of oil have from time to time been discovered in what has been declared to be true oil-bearing strata, but nothing appears to have been done to follow up the discovery. But most important of all, and one which is now attracting considerable attention is the reputed oil fields at Ceres, in the Cape Colony. These are said to cover an extent of upward of 200,000 acres, which, if oil is subsequently struck, would

make it one of the largest oil-bearing districts in the world. What is, however, most surprising about all these so-called petroleum discoveries in South Africa, is that they eventually hang fire after making some progress. The Ceres oil fields is a case in point. So far back as 1895, the Colonial papers teemed with references to the reputed discoveries of vast oil deposits at Ceres, and the mineral rights over the several farms on which the petroleum was said to occur were promptly secured by a Kimberley syndicate. Active prospecting work was undertaken, and considerable talk of deep boring, to prove the value of the ground, was indulged in, but up to the present nothing, we believe, has been done to put the discovery to the test. This can not be explicable on the supposition that the deposits have belied their earlier promise, for, although exhaustive testing by proper boring has certainly not been carried through, competent experts have testified to the probability of petroleum being struck when a certain depth has been reached. The Ceres fields, they declare, are of the true oil-bearing formation, lying in their pristine position, undisturbed by igneous upheaval. Yet their development inexplicably hangs fire. In some quarters, the blame for this is laid on the too exorbitant demands of the syndicate in whom the mineral rights are vested, whose unbusinesslike methods have frustrated all attempts to test or exploit the property, while in other quarters it is said that those who have been willing to provide the funds for the sinking of deep bores, to test the value of the alleged deposits, have been outrageously exacting in their terms. A few thousand pounds judiciously spent would speedily determine the matter one way or the other.

The extent of the oil trade with South Africa is seen by the enumeration of the

The extent of the oil trade with South Africa is seen by the enumeration of the figures of the total imports into that country. For instance, in 1897 paraffin and other lamp oil was imported of a declared value of £123,602 (\$601,509) of which the Transvaal share was £48,546 (\$236,249). The total imports for 1896 amounted to £112,671 (\$548,313). In addition to oil for illuminating purposes, South Africa consumed lard, machine, and other oils of the declared value of £154,094 (\$749,898) in 1896 and £121,680 (\$592,156) in 1897, making a grand total of £266,765 (\$1,298,212)

and £244,682 (\$1,190,745), respectively.

## VALUE OF GOODS IN TRANSIT.1

The following figures give the value of goods sent under transit duties from Natal to the under-mentioned territories:

	1896.		1897.	
South African Republic Orange Free State Griqualand East. Pondoland Basutoland	30, 369 7, 350 2, 142	\$2, 752, 234 147, 791 35, 769 10, 424 6, 842	£555, 915 27, 303 6, 771 2, 297 770	\$2, 705, 360 132, 870 32, 951 11, 178 3, 747

# RAILWAYS.2

The revenue of the Natal railways in the last two years was:

The working expenditure in 1897 was £583,088 (\$2,837,598). The Webb & Thompson electric staff system has been introduced, and part of main line (833 miles) relaid with 80-pound steel rails (29,893 tons). One hundred high-sided wagons (cars) have been made in the colony, and 100 low-sided wagons (cars) made in England have been bought; these cars carry 22 tons each.

Men employed: Assigned Indians, 1,259; free Indians, 727; natives, 628; total, 2,614.

Total length of railway opened for traffic, 458½ miles.

With a white population of 850,000, South Africa paid in taxation in 1897, \$26,712,580. In stamps and licenses, there were paid \$4,130,285, more than £1, or \$4.87, per head.

#### GENERAL REMARKS ON IMPORTS FROM UNITED STATES.

Under date of September 23, 1898, Consul-General Stowe writes:
In the first part of this year, there was a decrease in imports from the United States, due to the war with Spain, etc. An improvement is now visible, and steamers are arriving weekly with full cargoes. Whether this is in part owing to the alleged freight war in the United States I can not say, but I submit the following from the British and South African Gazette of September 2, a London paper that is published in the interests of South Africa and English manufacturers, and is considered the leading journal in that respect:

It is clearly evident that Uncle Sam has put on his thinking cap, and the subject which he is now considering is how to exploit our South African possessions. At the present time, he is rather at a disadvantage, for our manufacturers and merchants have control of the market, and their business arrangements have been perfected by years of trial and experience and common assimilation. There is also a solidarity between the colonies and the mother country which it is difficult to break through. All the same, our Yankee cousin is hopeful and thoughtful. He sees that the freight rates of the shipping "combine" favor his trade, but recognizes that the cash basis, which is a necessity of his business, is inferior as a trade stimulus to the credit system established between the British manufacturer and the South African trader. He might be disposed to accord this advantage were he assured against risk, and he pins his faith to the establishment some day of some distinctively American institution, which will provide him with information of the financial standing of buyers which will give him this assurance. In the meanwhile, he seeks to make up for these disadvantages to his business by all the push and resourcefulness—and it is no mean quantity—which American ingenuity knows.

<sup>&#</sup>x27;I would suggest to manufacturers of the United States interested in South African trade that they subscribe for the British and South African Gazette, from which they will obtain much information and, I trust, benefit.

His study of his customers is unbounded, and his accommodation to their desires knows no limit. He lets no occasion or opportunity pass to bring to their knowledge the merits of his wares, even if no sale results, confident that the future will justify his exertions. By such tactics as these, he is pressing close his British competitor at all trade outlets, and his exertions in many cases are repaid by the orders he is booking right under the noses of his more conservative relations. On several hands, information is daily reaching us of the success which is attending his efforts, which is full of admonition and warning to home firms. When foes are equally matched, war is more disastrous, and our kinsmen across the Atlantic may be reckoned to be our equals, if not sometimes going one better. For these reasons, the need for introspection and circumspection by British traders in all departments—so often enforced in these columns—becomes daily more urgent, if we are to maintain and increase our hold of South African trade.

To show the decrease in British exports to South Africa for the six months ended June 30, 1898, I append the following:

Countries.	18	198.	18	97.
Cape Colony Natal Portuguese possessions	£4, 555, 480 1, 416, 451 632, 770	\$22, 169, 243 6, 893, 159 3, 079, 375	£5, 079, 111 1, 725, 581 667, 561	\$24, 721, 387 8, 397, 540 3, 248, 686
Total	6, 604, 701	32, 141, 777	7, 473, 053	36, 367, 613

A demand for railway material and piping is noticed, and several representatives of American producers are now here. There was recently landed from steamers from the United States a large amount of steel rails, iron piping, and mining machinery; over a hundred windmills, beside pumps for irrigation purposes; also 500 packages of agricultural implements.

In connection with agricultural implements, the following, also clipped from the paper above mentioned, may be of interest to the manufacturers of mowing machines:

Despite the fact that our exhibition show yards are full of home and foreign made mowing machines of every type and almost every design, the perfect machine, capable of tackling the Natal veld with its numberless hollows and inequalities, has, I venture to think, yet to be made. The chief defect of all the machines I have seen lies in the use of the driving-rod principle, which is unable to stand the wear and jolt of our rough veld. What is required is some other method of working, which also allows of the knifeboard being raised at right angles from the ground while the machine is in motion, which is impossible with the driving-rod arrangement. With present machines on our rough ground, the length of working life does not stand at an adequate ratio with their heavy prime cost, and this would be improved by mechanism in the way I have mentioned or otherwise.

A demand for windmills, pumps, and piping is caused by anticipated irrigation legislation, and the present activity in well boring. Pumping engines are also in demand. The Natal government is entering on an extensive scheme of irrigation in the Tugela Valley, at a cost of \$450,000, and will soon have 4,000 acres under irrigation.

During the six months ended June 30, 1898, the imports of piping into South Africa, with the exception of the port of Lourenço Marques, in Portuguese territory, was:

1898	£97, 715 = \$475, 530
1897	49.250 = 240.675

It will also be noticed that while the importation of flour from the United States has decreased in 1898, the import of wheat has increased £12,620 (\$61,415), and I am of the opinion that our labor and flour saving machinery should be exhibited here.

While the importation of vehicles has fallen off, the same is not true of bicycles. The imports in the year 1897 exceeded those of 1896 by 171 per cent. The demand continues and the machine is popular, as the roads are good practically during the whole year.

Salt and preserved (tinned) meats have not fallen off, but have an

increased importation of £15,566 (\$75,752).

The attention of manufacturers of the United States should be called to the stove trade of this country. The stove known as the "F Swedish" is the principal one in use. It is small, with small coal space, and small oven, but the "plate" is heavier than the Americans make. Recently, some sales have been made of American wrought-iron ranges, in the small sizes (4-hole), and they are well liked. Stoves are used only for cooking purposes, as the climate is moderate. I am of the decided opinion that if manufacturers in the United States would produce stoves adapted to the wants of the users in this country, a large trade could be opened up. As they would be shipped "knocked down," the freight would not be excessive, but in order to successfully compete and to produce such goods as are required, it would be necessary to have samples or make a visit.

I desire to call the attention of packers of the United States to the following advice given to the writer by a native. He says, if hams and bacon, such as are cured in the United States with sugar, and which lose their firmness and become soft while crossing the equator and in tropical countries, were first wrapped in impervious paper, surrounded with pulverized charcoal to the thickness of half an inch, and then put in the usual sack or bag, they would keep firm and sweet in any climate. The following paragraphs from British journals may be of interest:

#### AMERICAN TRADE WITH SOUTH AFRICA.

It is necessary to take only a superficial glance over the manifest of cargo of any vessel arriving here direct from the United States, to appreciate the large volume of business now being done with that country. The growth of our import trade with America furnishes one of the most remarkable features of our commerce. The indications are that it will go on still further increasing. We have now in Cape Town, in the person of Colonel Stowe, an American consul-general who is first of all a commercial man, and he is evincing the keenest interest in promoting our trade relations with the country which he represents. Further, with the growth of this business there have settled among us representatives of large American firms of manufacturers, and these gentlemen keep their principals well advised as to the peculiar needs of South Africa. In this connection, it is interesting to note the opinions of Mr. James V. James, of the Colonial-American Importing Company, who, writing from Cape Town to an American trade journal, says that at no time have South African buyers been so prone to examine the claims of anything American. Shipping agents know, but the trade in general will, he says, be surprised to learn, that the combination between the lines of steamers plying between Cape ports and England makes their rates of freight greater than between New York and the same places. It is in fact, cheaper to ship from New York to this British colony than from the mother country to her own offspring. Nevertheless, Mr. James acknowledges that British manufacturers still lead in this market, because they first opened the trade and it is a conservative market. Further, the son still clings to the mother country, though, for ourselves, we are rather inclined to believe that there is so much that is practical about the average South African colonist that he is not over inclined to be patriotic at the expense of his pocket. The trade in American and continental goods has demonstrated that fact. Then, too, it is urged that the British ma

standing of buyers." This very interesting communication concludes with the hope that the day is not far distant when the onward movement of American exports to this country will be assisted by some movement similar to that at Caracas, and the opinion is expressed that the representatives of such an exhibition here could be trusted to keep its exhibitors informed of the financial standing of buyers. We have quoted largely from Mr. James's letter, because it goes to show how keenly alive American representatives are in their efforts to secure a still larger share of our trade. Notwithstanding the drawback in the matter of credit, American goods, and particularly agricultural machinery, have become very popular in South Africa. There is something about the goods which catches the fancy of the colonial buyer, and British manufacturers, warned long ago, have considerable leeway to make up if they would maintain their own.

#### WHAT GERMANY SHIPS TO SOUTH AFRICA.

In the table below are set out South African exports from Hamburg during 1897. We have made a special feature of the complete enumeration of the classes of goods dealt in, for the purpose of showing the extremely diversified character of the German export trade with South Africa, and how industrious our Teutonic rivals are in catering for the requirements of the smaller consumer, the result of the direct trading with whom has led to the almost fractional shipments of the heterogeneous mass of goods which are set out in detail below.

It should be noted that the figures only refer to Germany's direct oversea trade with South Africa in German bottoms via Hamburg, no shipments of any consequence being made to that country from other German ports. They also take no cognizance of goods forwarded to South Africa via Antwerp, Rotterdam, or England, although the figures are doubtless swollen to some extent by the inclusion of Austrian and Belgian goods shipped via Hamburg.

# SHIPPING.

In a report dated October 18, 1898, Mr. Stowe says:
The following vessels and tonnage entered into the ports of South
Africa during the six months ended June 30, 1898:

Port.	Vessels.	Tonnage.
Cape Colony	1, 135 340 262	3, 164, 431 603, 667 96, 108
Total		3, 864, 206

Of these 7 were American, registered at 21,112 tons.

#### The classification is as follows:

#### NATAL.

Nationality.	Vessels.	Tonnage.
American Argentine Ropublic Austrian British Danish Dutch French German Italian Norway and Sweden Russian Total	1 1 1 287 1 3 9 1 34 1	659 1, 221 298 552, 124 1779 1, 311 3, 606 15, 598 664 26, 760 1, 247
DELAGOA BAY.		
British French German Italian Norwegian Portugese Swedish	151 19 26 1 22 41 2	96, 108]
CAPE COLONY.a		
United Kingdom United States Dutch French German Italian Norwegian Russian Swedish	967 12 1 19 47 7 64 5	2, 983, 444 9, 857 290 47, 141 59, 934 5, 896 44, 741 5, 258 5, 718 2, 152
Total	1, 135	3, 164, 431

a This table is from a report dated October 27.

While only seven American vessels entered all ports of South Africa, with a registered tonnage of 21,112 tons, there was an approximate tonnage of over 600,000 tons of American products landed, the balance above the 21,112 tons being shipped in foreign bottoms; and it will be remembered that registered tonnage does not mean cargo tonnage, as vessels carry more than the registered. I also, in this connection, desire to call attention to the fact that other American productions come through other countries. The system of agencies of American manufactures and products in London and other cities for export distribution, is to be deprecated. While it means more work and some sacrifice in profits for a time to deal direct, in the end it will be more remunerative, and have a better tendency to hold the trade acquired.

I do not desire to depreciate the work of the foreign export connections, for they have done good service in introducing American productions in foreign countries; but is not the time near at hand when American producers should have their trade direct?

A merchant marine, protected by a subsidy system (without which it would seem there could be no competition with the subsidized mer-

chant marine of other countries), would bring maritime independence, and the ocean freights would realize very large and satisfactory returns, not only to the shipowners but to the United States as well.

#### DECLARED EXPORTS.

Value of exports declared for the United States at the several consular offices in British South Africa during the year ended June 30, 1898.

# SOUTH AFRICAN REPUBLIC.

Consul Macrum sends from Pretoria, November 12, 1898, copy of a report on the gold production in the South African Republic, including that of the Rand (Johannesburg), for the month of October and the first ten months of 1898, compiled by the Chamber of Mines. Extracts are given below:

The Rand has at last achieved and surpassed an output of 400,000 ounces of gold as the production for a single month of twenty-eight working days. Every twenty-four hours, then, witness the recovery of 14,250 ounces of gold, worth rather over £50,000 (\$243,325).

With yesterday's declaration, the gold winnings of the whole Republic come wellnigh to three and three-quarter millions, or, to give the exact figures, 3,700,908

ounces. At the rate we are now going, the total for the whole of 1898 would be over four and a half millions. But it is well to qualify this forecast. Many of the mines are running short of that most necessary provision—water. Already we have the richest mine of the Rand, the Bonanza, with its stamps hung up on their catches, for want of water for the amalgamation and the cyaniding processes. This shortness of water has already affected the October schedules, for neither the Stanhope nor the Geldenhuis Main Reef are able to record an ounce of gold, while the New Modderfontein ran half time only.

It is indeed wonderful that the companies have been able to continue crushing operations with such vigor. To-day, the Rosherville dam is dry. The lake at Vogelfontein is also at very low water mark. It is to be feared that unless there are heavy showers during the next few days, the "water question" will largely affect

the output returns for November.

The value of October's 423,000 ounces, being the production from all the gold mines in the State, is just upon £1,500,000 (\$7,299,750), which may be compared with £11,653,725 (\$56,712,853), the gross value for 1887, and £12,208,411 (\$59,412,232), the value of the gold production of the United States in the same year. Although the combined mines of Colorado, California, Dakota, Montana, Alaska, and Nevada put out more gold last year than did the South African Republic—the 35 miles of Rand and the "scrapings" of Barberton, Lydenburg, and Klerksdorp—it is not likely that the Transvaal will take second place this year. Deep levels continue on the up grade, as their production in October was 106,426 ounces. It is the first time that the hundred thousand has been exceeded. No less than 1,134 stamps were employed, compared with 1,017 in September. Perhaps, before the end of the year comes, the deep levels will be found to have contributed upward of a million ounces to the 1898 total. It is about time that the significance of this was felt by investors. Yesterday's record was in greater measure attributable to the longer running time of the mills, for the stamping power was merely augmented by 67 stamps. It is not likely that November will see an improvement on the October figures, but the December return should prove a fitting final declaration for the year. It is noteworthy that not only is the number of stamps at work being increased, but the rate of increase is increasing. When the continuation of the main reef to the east is exploited, as it soon will be, when the miles and miles of neglected gold reef are ringing under the sluices, these figures will seem insignificant except to the reminiscent.

The total Witwatersrand outputs for the months of September and October compare in this manner:

From	September.	October.
Milla Concentrates Tallings Slimes Banks	Oz. Dwt. 241, 609 10 10, 909 16 122, 877 0 7, 900 3 783 11	Oz. Dwt. 253, 320 9 11, 285 12 126, 741 16 9, 115 6 327 17
Total	384, 080 0	400, 791 0

The outside districts (De Kaap, Lydenburg, and Klerksdorp) produces 22,426 ounces, against 24,422 ounces in September, 21,374 ounces in August, and 22,663

ounces for the month of July.

The details above given of the October output show that the largest proportion of the increase was from the mills, which show an improved yield of about 12,000 ounces. From concentrates, there is only an advance of 375 ounces. The gross yield from tailings is practically 4,000 ounces, while the gold won from slimes is 1,200 ounces more than in September. The net Witwatersrand increase is 16,711 ounces.

As regards the outside districts, there is a decline of a couple of thousand ounces. The aggregate of the deep levels is 106,426 ounces. For the first time, as was predicted, the aggregate of the 100,000 ounces has been surpassed.

<sup>\*</sup>Note by Bureau of Foreign Commerce, March 13, 1899: In a report dated January 21, 1899, Consul Macrum says that the output for the year 1898 amounted to 4,555,000 ounces, valued at over £17,000,000 (\$82,722,000). The output for the last fifteen years was valued at £71,000,000 (\$345,480,000).

The comparative figures for the months of September and October, with the names of the controlling houses, are appended:

Controllers.	Controllers. Company.		October.
Eckstein		Ounces. 8, <b>54</b> 5	Ounces. 8, 450 3, 372
Rand mines Do Do	Durban Roodepoort Deep Geldenhuis Deep	4, 383 14, 191	14, 317 5, 358 14, 704
Do	Glen Deep	7, 509 5, 844	5, 988 8, 742 4, 693
Consolidated Gold Fields   Ro	Rose Deep	8,783	17, 379 10, 787 12, <b>6</b> 36
		97, 594	106, 426

#### Ten months' output.

Month.	Com- panies.	Total output.	Stamps running.
January February March April May June July Angust September	7 7 8 8 9 10	Ounces. 51, 524 48, 375 59, 060 64, 353 73, 297 74, 636 81, 332 90, 602 97, 603	580 590 697 705 757 781 850 931 1, 017
October	11	106, 426 747, 205	1, 134

The aggregate of production for the ten months past, it will be noticed, is just upon the three-quarter of a million ounces. It may be that during November and December such totals will be secured by companies of this class that the level million for the year will be approached or even exceeded. But it seems doubtful. The Bonanza is closed down, its mill is silent, and this is a most serious factor. On the other hand, the Crown Deep may find it possible to couple up a few more of its stamps, and the Robinson Deep will gradually bring more heads into operation. So with the French Rand, which in October had 15 stamps idle. It would be both remarkable and noteworthy if this record were secured, but as far as one can see at present, it is not likely that more than a close approach will be made. Even that will demand the most favorable incidental circumstances.

The relation of the deep production to the Rand total works out at 261 per cent,

against 25 per cent in September.

September saw, for the first time, the number of stamps being operated on the deep-level properties exceed 1,000. This month there is a larger increase (117 stamps) than in any previous month this year.

#### PROMINENT COMPANIES.

In the subjoined table are classed the leading companies, those producing over

7,500 ounces of bullion, representing roughly £25,000 in value.

Until the chamber's analysis is published, it is only practicable to give the figures of bullion output, and the companies are perforce arranged on that basis. It must, however, be remembered that, owing to the variation in the bullion, the positions may not be the same as those according to the fine-gold standard. Undoubtedly the best way to compare is on a value basis, which is a principle followed by the State Mining Engineer's Department, besides being common with American and other mining companies. It would, we are inclined to urge, be a vast improvement if the chamber made the declaration in pounds sterling. The present crude-ounce basis is most unsatisfactory, because it is an indefinite unit. The quantity factor is basis is most unsatisfactory, because it is an indefinite unit. The quantity factor is definite, truly, but an element of indefiniteness is introduced in the quality of the gold. There is, besides this, another great advantage which would ensue on a value basis of declaration. People are accustomed, as it were, to think in pounds, shil-

Digitized by GOOGLE

lings, and pence—"the £ s. d. of life," as someone has called it. Few, however, obtain a proper idea of the output when it is declared as so many thousand ounces. But the greatest advantage of all is in respect of international comparisons. A crude ounce here may be of quite different value to a bullion ounce in America, in Australia, or in India. With the declaration in pounds sterling, these difficulties would be swept away. It is certainly a radical alteration, but radical alterations are frequently beneficial even if they are not absolutely necessary.

### Leading companies for October, with figures for the preceding month.

A summary of the foregoing figures shows the total value of Cape Colony with the Transvaal in 1897 to be as follows:	the trade
Direct importations from over sea.  Bought in the Colony	\$20, 363, 572 6, 946, 671
Total	27, 310, 243 11, 705, 602
The total value of the trade of Natal with the Transvaal in as follows:	1897 was
Direct importations from over sea	\$11, <b>339</b> , 042 6, 232, 181
Total in 1897	17, 571, 223 14, 604, 527
Increase	2, 966, 696
The total value of the trade of Lourenço Marquez in 189 Transvaal was as follows:	7 with the
Direct importations from over sea.  Bought from Delagoa Bay	
Total in 1897	
Increase	6, 540, 630

#### SUPPLEMENTARY REPORT.

I inclose a list of the dividends paid by the mining companies of the

South African Republic during the year 1898.

It must be remembered that this has been a remarkably dull year, so far as ordinary business is concerned, and the mining companies, it is freely said, are not working up to their full capacity; but, nevertheless, the production and profits have been greater this year than ever before. When the differences that are said to exist between the government and capital have been removed or adjusted, the Transvaal, it is predicted, will see a most wonderful boom.

It would appear that the payment of such enormous dividends should produce a marked business activity, until it is realized that fully 90 to 95 per cent of these profits go to Europe, leaving but a small fraction

to be put in circulation at home.

CHAS. E. MACRUM, Consul.

PRETORIA, December 31, 1898.

a Bonus equals 380 per cent.
b Bonus equals 2112 per cent. One Rose Deep share for 3.24709 Consolidated Deep Levels. The value of Rose Deeps in calculating the equivalent distribution is taken at 61. The bonus represents a partial distribution of assets and can not be considered wholly as a dividend.
c The dividend is payable on this "old" capital, the 550,000 shares created for the absorption of the Gold Fields Deep not ranking for dividend until after July 1, 1898.

# NORTH AMERICA.

# DOMINION OF CANADA.

#### REPORT FROM CONSULATE-GENERAL AT OTTAWA.

The year past has been considered by Canada an exceedingly prosperous one. Business in all branches has been good, and in certain lines, the development has been rapid.

#### TRADE.

Statistics show that the total imports into Canada for 1897 amounted to \$119,218,609, and the exports to \$137,950,253, or an excess of exports over imports of \$18,731,644. Of the imports, \$111,294,021 was for home consumption, and the total imports and exports amounted to \$257,168,862. These figures do not include exports and imports of coin and bullion. Of these amounts (including coin and bullion) there were imported from the United States, \$70,766,316, or 59.36 per cent of the whole, and exported thereto \$49,373,472, or 35.79 per cent. Great Britain and colonies sent \$31,562,855, or 26.47 per cent, and took from Canada goods to the amount of \$82,238,023, or 59.61 per cent. The balance of the world took from Canada the remaining 4.60 per cent of her exports.

The dutiable imports averaged \$14.29 per head of population, and the free imports \$8.70 per head. The exports averaged \$26.60 per head, and the total trade \$49.59 per head. The duties collected on imports were \$19,891,997, an average of \$3.84 per head. The percentage of duty on imported goods, dutiable and free, was 16.69 per cent.

The total imports of dutiable goods for 1897 was \$74,108,590, a reduction of about \$150,000 from the previous year. Free goods amounted to \$40,433,825, or 62 per cent of dutiable goods. Those entered for home consumption amounted to 60 per cent of the whole.

The total value of imports for home consumption was \$111,294,021. Of this, Great Britain furnished \$29,412,188, or 26.43 per cent, and the United States \$61,649,041, or 55.39 per cent. The duties collected on imports from Great Britain were \$6,205,367, and from the United States \$8,147,075.

The following table gives articles imported for home consumption under groups or classes:

Dutiable goods.	Free goods.	Per cent of duty on dutiable goods.	
\$13,655,482	<b>\$5, 137, 678</b>	23.75	16. 30
4, 042, 226	19, 806, 964	25. 57	5. 19

	\$13, 655, 482 4, 042, 226 10, 428, 183 30, 284, 115	\$13, 655, 482 \$5, 137, 678 4, 042, 226 19, 806, 964 10, 420, 183 8, 125, 421 30, 284, 115 6, 854, 958	Dutiable goods. Free goods. of duty on dutiable goods.  \$13,655,482 \$5,137,678 23.75 4,042,226 19,806,964 25.57 10,420,183 8,125,421 24.40 30,284,115 6,854,958 28.19

Digitized by G2950gle

The percentage of each of the above classes to total imports is: A,

17.62; B, 22.37; C, 17.40; D, 34.84; E, 7.77.

Canada imported from the United States the following goods to the amount of \$500,000 or over: Bicycles and tricycles, \$732,812; books, etc., \$535,946; grain of all kinds, \$590,009; carriages of all kinds, \$510,366; coal, \$8,909,803; cotton and cotton manufactures, \$1,119,147; drugs, dyes, chemicals and medicines, \$1,558,886; fruits, green, \$583,080; iron and steel and manufactures therefrom, \$8,805,060; leather and leather goods, \$1,193,730; oils, kerosene, etc., \$613,188; paper and manufactures therefrom, \$686,172; seeds and roots, \$524,794; sugar, \$804,991; tobacco and manufactures therefrom, \$2,053,942; wood and manufactures therefrom, \$511,173; lumber and timber, \$1,520,824; hides, \$2,106,718; wool, unmanufactured, \$507,473; cotton wool, \$3,097,843; crude rubber. \$1,038,200; coin and bullion, except United States coin, \$4,625,699; indian corn, \$718,381.

Canada exported during the year the following values under the different headings (sawed lumber being classed as "manufactures"):

	Total.	To Great Britain.	To United States.
Produce of the mine	10, 314, 323 6, 066, 585 39, 245, 252 17, 982, 646 34, 715, 480	\$354, 769 4, 366, 081 2, 381, 626 33, 600, 891 13, 507, 342 15, 295, 087	\$10, 532, 689 2, 998, 655 8, 651, 606 5, 081, 811 2, 419, 814 14, 998, 722

Of the products exported to the United States, lumber is, of course, by far the most prominent, followed by coal, gold and silver quartz, fish, hides, wool, hay, sheep, cattle, wood pulp, and whisky, in the order named.

In all the foregoing figures I have given the comparative figures of the trade with both the United States and England (or Great Britain, which term includes colonies as well), and the result, notwithstanding preferential tariffs, etc., can not be other than gratifying to us.

#### TRANSPORTATION.

The first season of the new lake and rail line between United States ports on the lakes and Montreal, via Georgian Bay and the Parry Sound and Canada Atlantic railways, mention of which has been made in previous reports, has proven a success beyond expectations. This line was inaugurated to divert shipments of grain, etc., from United States ports to Montreal, reaching deep-water ships by a much shorter haul than by any United States port.

The following table represents approximately the tonnage handled

over this line during the past season:

Description.	Quantity.
Grain exported via Montreal bushels. Grain shipped to New England ports	8,500,000 404,000 40,000 4,800 20,000

There is also considerable grain, flour, etc., now in the elevators and warehouses of this line, to go forward in bond during the winter.

All of the above was drawn from the United States via Chicago, Milwaukee, and Duluth, and the rush of freight was so great as to tax the facilities of the rail part of the line to its utmost limit. The handling capacity of the port of Montreal was unequal to the task, and for a time a serious blockade existed there. It was reported that between 300,000 and 400,000 bushels of grain were handled with shovels, as the elevators could not take care of it. There is no doubt but that the war scare, and the consequent stoppage of shipments from United States ports, turned a large amount of this freight in this direction, and it remains for another season's business to show whether or not the volume will be kept up. The fact exists, however, that, with the exception of inadequate harbor facilities at Montreal, the line will prove to be a factor of no small power in moving the Western grain crop, and some steps should be taken by the United States lines of transportation to prevent the diversion of so much traffic from United States ports to this line. Preparations are being made to remedy the lack of facilities at Montreal, so as to be ready for another season.

The Georgian Bay canal scheme is being agitated all along the line of the canal. Meetings are being held to discuss and indorse the project, and an English syndicate has been formed to build the canal, provided the Canadian Government will guarantee the interest at 2 per cent on bonds to the amount of \$17,000,000 to run twenty years. The outlook is considered bright for the early commencement of the work.

#### MINING.

The Klondike excitement temporarily lulled the mining boom in the more easterly regions of Canada, but interest is again being roused in the possibilities nearer home, and a number of rich finds during the past season have helped to stimulate it. There is no doubt but that the Province of Ontario is rich in minerals, but the development has been comparatively slow, there being in many cases a reluctance on the part of capital to go into these fields.

#### LUMBER.

Lumber, which has for years been the leading and in fact almost the only industry of Ottawa, is slowly declining, owing to the increasing distance from the forests where the logs are cut. The magnificent water power, which is almost in the center of the city, is expected, however, to make Ottawa a manufacturing center, as room for such establishments is acquired by the decrease in the number of lumber mills. This, however, will be gradual, and Ottawa will be the lumber center for many years to come.

CHARLES E. TURNER, Consul-General.

OTTAWA, December 23, 1898.

# REPORT FROM CONSULATE-GENERAL AT MONTREAL.1

Business conditions in the Province of Quebec during the six months ending June 30 have been generally favorable. There has been a steady growth of activity in many branches of the distributing trade,

and the movement promises to gather force during the balance of the year. The export trade has been good, particularly in agricultural and dairy products. Bank clearings indicate the largest volume of business ever done at this port and in this Province. Additional evidence in the same line is furnished by some figures supplied by Hon. Mr. Fielding, minister of finance. The circulation of the small Dominion notes of the denomination of \$1 and \$2 is justly regarded as a very good indication of the volume of business that is being done. When trade is slack, the demand for these small notes falls off. When trade is brisk, the circulation increases.

A statement of the circulation of these small notes on June 30 last showed an increase of \$632,192 above the figures at the close of the previous fiscal year. Large and gratifying as this increase was, the figures for the past three months afford even stronger evidence of the expansion of trade. The increase of circulation from July 1 to September 30, 1898, was \$789,169. The amount of these notes in circulation on September 30 was \$8,367,000, an increase of nearly a million and a half dollars in fifteen months.

A new and vast enterprise has been projected, is now under discussion in business circles, and will doubtless be presented at the next session of the Dominion parliament, to secure for the port of Montreal a share of the immense trade of Lakes Superior and Michigan. The proposition is to build what is called the Georgian Bay Canal, so as to shorten the communication between the Great Lakes and this city by 365 miles, and have a waterway to the interior of the country, which would not be equalled by any other similar enterprise in the world. The projectors of the scheme are full of energy, and it is believed it will have a favorable reception when presented to parliament.

#### TRADE WITH THE UNITED STATES.

The course of the trade of the United States with Canada has for some years been one of expansion. Variations in its amount have occurred, owing to tariff changes and the lower or higher capacity of the Canadian people to purchase foreign goods, but these variations have been only temporary in their effect, when they restricted the imports into Canada of goods from the United States.

Separated as the two countries are by only an imaginary line, the most friendly relations should be cultivated between the two people. A year's observation convinces me that the largest reciprocity in trade practicable should be arranged for by mutual reductions of duties on

many articles.

The United States duty on lumber, hay, live stock, and barley is wellnigh prohibitory. This in a great measure restricts trade and turns away many purchases of American goods. It is more convenient for Canadians to purchase in the United States than from any other country; but to obtain their custom to the fullest extent, they must be allowed to enter their products into our markets without excessive By a larger reciprocity, I feel confident the United States would be greatly the gainer.

A comparison of the statistics of imports of manufactured goods from the United States into Canada, from 1893 to the close of the last fiscal year, ending June 30, 1898, with the statistics of imports from Great Britain into Canada for the same period, shows with striking clearness the fact that the United States has been gradually but steadily capturing more and more of this trade, while Great Britain during the same

period has been losing its hold.

The following is a list of the goods imported from Great Britain into Canada, the import of which in 1897 was less than in 1893, while the import of the same class of goods from the United States exceeded that of 1893:

Articles.	Increase of imports from United States into Canada in 1897 over 1893.	from Great	Articles.	Increase of imports from United States into Canada in 1897 over 1898.	from Great
Braces and brushes	\$18,500	\$7,500	All other iron goods	\$1,541,000	\$3, 613, 000
Carpets	81,000	44,000	Tin goods	61,000	103,000
Carriages	1, 300, 000	181,000	Sundry metal goods	310, 000	323,000
Watches and cases	110, 700	8, 300	Scientific instruments.	2, 900	37, 000
Cordage	54,000	35,600	Paints and colors	76,000	79,000
Cotton goods	15, 000	752,000	Silks and ribbons	84, 400	146, 400
Glass and crockery	87, 000	138,000	Dress and piece goods.	81, 000	171, 100
Hats, caps, etc	176,000	265,000	Umbrellas	800	173, 000
Jewelry, etc	74,000	82,000	Wood, and manufac-		
Agricultural imple-	1 3,000	32,000	tures of	785, 000	30,000
ments	356, 000	3, 300	Wool and woolen goods	18,000	4, 438, 600

The above list practically includes the great bulk of the manufactured goods imported into Canada from the United States and Great Britain. It shows in what classes of goods the American manufacturer has been successful in his competition with the manufacturers of Great Britain in the markets of Canada. In builders' and cabinetmakers' hardware, the goods made in the United States have almost achieved a monopoly, as have also brass tubing and other brass goods. This has resulted from the fact that our manufacturers have made a close study of the tastes and requirements of the Canadian consumer. Canadian dealers show their appreciation of United States goods by confining their imports to them. It is the opinion of importers of such goods from the United States as come more or less into competition with those from Great Britain, that the discrimination in favor of British goods of a 25 per cent reduction in duty will have only a trifling effect, if any at all, upon the volume of imports from the United States.

Canadian consumers of the leading articles made of iron or steel, or a combination of them, and of other metallic goods, show such a decided preference for those made in the United States that they will not take British goods, even if the preferential duty cause them to be proportionately lower in price. At the same time, they consider it would be well for United States manufacturers to avoid presuming upon the advantage they have acquired by indifference to the quality of the goods they send to Canada, by less careful packing, or by neglecting to keep in close and constant touch with importers, whose ideas as to local tastes and requirements should be carefully studied and met as far as Although the present tariff in favor of British goods is not sufficient to change the current of trade to any marked extent from the United States to Great Britain, a much greater reduction of the duty on British goods might have some effect in that direction, especially if British manufacturers awoke to the necessity of catering more skillfully to the needs of the Canadian consumers. The possibility of such changed conditions arising needs to be considered by United States manufacturers, who will show wisdom in preparing to meet a more active competition from British-made goods that may arise in the future. The more thoroughly we satisfy the Canadian importers in quality, price, terms, and other details, the more assured will be the prospect of our keeping and advancing our hold on the Canadian market.

In all articles of clothing, such as costumes made up, etc., there is a likelihood of the imports from Great Britain developing considerably. A large trade in this class of goods could be done if prices could be fixed at a moderate percentage in excess of those made in England.

Although in the article of bells the United States has made great advances, there is great room for improvement, a preference still being

given by some buyers to bells cast in England.

In the line of scissors English goods are preferred, and if this class of articles is ever to be supplied on a larger scale from United States factories, close attention will have to be paid to the patterns and the qualities of those made in England, which now hold this market.

Pocketknives of English make are also preferred, the combination of low prices with excellent quality and attractive patterns giving them an advantage in competition with those of the United States. It may be well to note that in all kinds of edged tools the prime requisite for popularity among consumers is good quality, which insures durability and reliability for steady wear, as upon these conditions the earning power of the workman who uses the tools largely depends. many cases impracticable for a workman to exchange a defective tool for a better one, as his work is being done at a distance from any hardware store; and if he should be unlucky enough to have a bad tool, the mark on it is noted and both he and his fellow-workmen acquire a prejudice against the goods of that maker which is difficult to remove. If all edge-tool makers would remember that every tool they turn out will either enhance or damage their reputation, they would take the utmost precautions against allowing an inferior article to be shipped from their factory.

Some retailers are of opinion that brass and iron bedsteads, or those having a combination of these metals, might be made in the United States and imported into this district with a fair profit. The prices of this class of goods here are so much higher than they are in Great Britain that there would certainly seem to be an opening if they can be produced to sell in competition with those made in this district. The matter is worth looking into. One requisite for success would be the production of a metal bedstead of a more attractive appearance, something in color and design more agreeable to the eye than the ordinary goods, the patterns of which are very old fashioned and their appearance

not pleasing as articles of furniture.

In regard to (1) packing goods, (2) conditions of transportation, (3) exchange, (4) banking, (5) credit terms, (6) manufacturing certain patterns and quantities of goods, and getting them up in attractive shape to meet local peculiarities and customs, the importers in this district have no criticisms to make. There are occasional differences between individual merchants and the United States supply houses, but they find no difficulty in having these adjusted to their satisfaction. The remarkable success of American manufacturers in securing almost a monopoly of the supply of builders', cabinetmakers', and other classes of hardware shows that the peculiarities of this market have been carefully studied, and an earnest and intelligent effort made to meet them.

As to port regulations, wharfage dues, and harbor facilities, these have little bearing on the imports from the United States, which come by railroad mainly. This port is commencing large improvements of its harbor, with the express object of competing in facilities with the ports of the United States for the accommodation of shipping. For

new docks, at least \$4,000,000 will be expended within the next year and a half.

Commercial travelers from the States are not required to take out a license in this district to do business, nor are they subject to any charges as such, or special supervision by the authorities.

The customs regulations require all goods which claim the differential reduction to be certified as to country of origin and manufacture, but this does not apply to any imported from the United States.

There are no taxes or excise affecting United States trade, other

than those covered by the tariff.

As to canals, the Government is expending large sums in deepening those which terminate in this district; that is, the St. Lawrence system. It is expected that with the opening of navigation next spring there will be a depth of 14 feet of water in these canals. One main object of the improvement is to increase the facilities for transporting wheat and other produce from the northwest for shipping via the St. Lawrence to Europe. It is anticipated that this work will be of considerable advantage to the port of Montreal.

#### IMPORTS.

The following table shows the imports at the port of Montreal from January 1 to June 30, 1898, as compared with a corresponding period in 1897:

#### WOOD PULP AND PAPER.

The wood pulp and paper industry of this province, and, in fact, throughout the whole of the Dominion of Canada, which started only a few years ago, is advancing with giant strides. English and Canadian syndicates are being organized, with immense capital, to erect new mills and purchase vast areas of spruce timber lands. The extent of the pulp-wood resources of this country is enormous. From Hamilton Inlet, on the northeast coast of Labrador, one might travel southwest around James Bay and then northwest to the valley of the Yukon River and never in that great distance be out of the region of spruce forests. Or a journey might begin near the southern boundary of New Brunswick and continue northwest to Portland Promontory, more than halfway up the east coast of Hudson Bay, and thence across the country again in an easterly direction to Ungana Bay, and still the traveler would never be out of a spruce-bearing territory. In these vast reserves of spruce timber many citizens of the United States have already secured large holdings and are engaged in the pulp industry, and the water power utilized in connection therewith is unsurpassed in the world. By far the greater part of the product of the pulp mills now goes to the United States, but England is beginning to stretch out eager hands to lay hold of a share of it. The consumption of paper is greater in the United States than in any other nation on earth. In order that our country may continue to be benefited by receiving a supply of pulp from Canada, many who have given careful attention to the matter contend that the duty now imposed by the United States for the importation of pulp should be materially lowered.

#### THE DRY-GOODS TRADE.

The fall trade in dry goods, which opened in September, is reported as the best ever experienced in the Montreal market. The feeling in all departments of the dry-goods trade was never more hopeful than it is at present. Another reassuring feature in the trade is the firmness of prices. Most of the home mills are very stiff in the matter of quotations. A good many refuse to accept orders for prompt delivery at any price. This is true of certain lines of cottons and blankets and knitted goods. Some lines of white and bleached cottons are scarce. Local firms would doubtless import them from the United States, but owing to the tariff conditions an element of uncertainty would be involved, which they do not care to take on large lots. The policy of the Canadian manufacturers is to keep out foreign products, and market conditions in the case of imported goods might be found, after purchases had been made, to be unfavorable to them.

#### THE COTTON INDUSTRY.

The manufacture of cotton fabrics is growing rapidly in Montreal and vicinity. Enormous new cotton mills are now in the course of erection. All the mills are kept running on full time, and the owners declare they are making satisfactory profits. The rapid increase of this important home industry must ere long cause a considerable decrease in the importation of cotton goods from the United States. By far the greater portion of the raw material, of course, comes from our country. The wages paid operatives are considerably below the scale demanded in the United States.

In regard to the technical information asked for in reference to cotton textiles, that is, "the number of picks to the inch, giving the warp first and the number of yards to the pound," it will be apparent that such information can only be given by local manufacturers, who are not willing to disclose what they regard as business secrets for the advantage of their competitors in eastern markets.

#### THE BICYCLE TRADE.

The bicycle trade in Canada is growing in volume from year to year. Better street paving now in progress in Montreal and other leading cities of the Dominion, together with improvements of the country roads in the vicinity of cities and towns, causes an increased demand for the bicycle. Retail dealers say that, according to the present outlook, the coming year will be more profitable than the present, not only on account of increased sales, but from experience, which will enable them to economize in various ways in handling and selling. The bicycle manufacturers of Canada are making vigorous efforts to push their wheels into foreign markets. There are no manufactories in the province of Quebec; all or nearly all are located in Toronto. A few weeks ago a consignment of Canadian bicycles, aggregating in value \$34,000, was sent from Toronto to Australia. About 10,000 men are employed in Canadian bicycle manufactories, and the capital invested is \$5,000,000.

The makes of American bicycles generally sold here are the Cleveland, Crescent, Dayton, Columbia, America, Columbus, etc. I am assured that the American makes are gaining in popularity. There is a good demand for American bicycle sundries. The popular prices of bicycles are \$50 to \$65. The Canadian tariff on American bicycles, and

bicycle parts, tires, saddles, lamps, etc., is 30 per cent.

#### CANADIAN PRODUCE.

Determined efforts have been made for the last three years to secure a larger market for Canadian produce—particularly butter, cheese, poultry, fruits, etc.—in England. These efforts are now more than ever intelligently directed by the commissioner of agriculture, who, by a series of lectures and practical work on experiment farms, has taught farmers how to produce articles that will compare with the best of similar products of other countries. In addition, through the influence of the commissioner of agriculture, all the steamship lines leaving the port of Montreal furnish ample cold-storage room in their vessels, so that the shipments from here now reach the English market in perfect condition. The Canadian railroads, also, supply refrigerating cars. Cold-storage warehouses have been provided at this port ample in capacity to meet A new enterprise to advance Canadian trade is just now being promoted. It is called "The Canadian Produce Corporation, Limited," and is incorporated in England, with a capital of \$10,000,000. While the headquarters are to be in London, Canadian branches will be in Montreal, Toronto, Halifax, and Winnipeg. The enterprise has been organized "for the purpose of providing better facilities and opening up larger markets for Canadian produce, to abolish the system of intermediate profits, and to furnish the British markets with an abundant and regular supply of pure Canadian food at moderate prices."

The corporation has made arrangements to construct and operate a large number of wholesale and retail establishments in the city of Lon-

don, dealing exclusively in Canadian products, such as dairy products, fruit, meat, bacon, fish, canned goods, flour, eggs, etc. These stores will be divided into departments for the different classes of food, and thoroughly equipped with mechanical refrigeration and all other modern improvements. Contracts are pending to meet the requirements of cooperative stores, army and navy contractors, hotels, and other large consumers throughout Great Britain, and arrangements have been made for holding periodical auction sales at the central wholesale warehouses of the corporation.

Arrangements have also been made on the Canadian side for securing a large and regular supply of fresh products, carefully selected from

the best and most reliable brands.

Special refrigerating facilities have been established by the government, whereby perishable products can be transported and preserved in refrigerator cars and cold-storage steamers all the way from the source of supply in Canada to the leading seaports of Great Britain. This new corporation will obtain full advantage of them. It has adopted the most improved methods of cold storage for its own warehouses and stores, and the services of experts in produce and refrigeration have been secured. The shipments will of course have to be made in bond through United States ports between the middle of November and the middle of May—the closed season of navigation by the St. Lawrence river route.

#### SHIPPING.

The following statement of the number and tonnage of seagoing vessels arrived at this port from the opening of navigation up to September 1, in the following years, has been furnished by the harbor master:

Year.	Steam- ships.	Tonnage.	Sail.	Tonnage.	Total vessels.	Total tonnage.
1895	465	824, 561	34	9, 890	499	834, 451

#### DEBT.

The statement of the public department on June 30 last shows that the total funded debt was \$34,283,841.53; the sinking fund invested amounted to \$10,004,577.78, leaving the net funded debt at \$24,279,163.75; the temporary loans and deposits amounted to \$1,166,706.46, making the total net debt \$25,445,870.21.

#### CANADIAN BANK CLEARINGS.

For the nine months, clearings in Canada have reached the enormous total of \$1,014,245,062, a gain over last year of \$190,565,963, or 23.2 per cent. These are the largest figures on record. For the month of September the clearings were \$112,405,324. The figures undoubtedly reflect the great expansion of trade throughout the country.

The three most important cities in the volume of clearings, Montreal, Toronto, and Winnipeg, show gains ranging from 24 to 27 per cent, while Hamilton shows an increase for the nine months of 6.7 per cent. Somewhat less active trade in the maritime provinces is reflected in a decrease of 1.1 per cent at Halifax and of 1.6 per cent at St. John, New

Brunswick. The clearings for the month of September and for the nine months ending September are given as follows:

	Septer	mber.	Nine months.		
Clearing houses.	1898.	1897.	1898.	1897.	
Montreal Toronto Winnipeg Halifax Hamilton St. John, New Brunswick	6, 414, 551 4, 919, 463 2, 773, 218	\$55, 080, 459 22, 766, 644 8, 035, 201 5, 164, 866 2, 971, 888 2, 620, 804	\$541, 970, 674 318, 512, 752 59, 144, 194 46, 121, 886 26, 052, 127 22, 443, 429	\$426, 176, 176 255, 822, 066 47, 808, 694 46, 641, 926 24, 407, 296 22, 822, 956	
Total Canada	112, 405, 584	96, 639, 862	1, 014, 245, 062	823, 679, 09	

#### DEPOSITS IN CANADIAN BANKS.

The public deposits in Canadian banks have now reached the enormous total of \$234,279,101, the largest on record. Of this amount \$84,306,117 is payable on demand and \$149,972,984 payable after notice. The figures are taken from the bank statement for the month of August, and are therefore official.

Current loans of the Canadian banks at present amount to \$218,077,369, an increase over August last year of \$15,620,182, while call loans show an increase over last year of \$4,869,068, amounting to

**\$21,475,172.** 

Another very important item in the bank statement, which illustrates the vast expansion in Canada's foreign trade, is the balance due to Canadian banks from foreign agencies. This amounts to \$25,533,817. At the end of July the total was only \$19,327,662. Balances due from agencies in the United Kingdom amounted to \$11,483,170. In July, the month before, the balance was only \$10,513,602, while in August last year it was \$12,249,663. The circulation of the banks continues on the increase, and has now reached the record figures of \$37,299,496, or an increase over the same time a year ago of \$2,845,110. The specie holdings have increased during the year by \$931,967, and the Dominion note holdings are \$17,579,203, or \$34,160 less than a year ago. The holdings of government debentures and stocks are \$40,016,696, or an increase of over ten millions.

#### THE PUBLIC DEBT OF CANADA.

There is a good deal of criticism in journals opposed to the present party in power in the Dominion on account of the increase of the public debt during the past year. The following are the principal statistics bearing upon the debt for 1896-97:

Gross debt	\$332, 530, 131
Cash assets	
Net debt.	261, 538, 596
Yearly increase	3, 041, 164
Interest	10, 645, 663
Interest from investments	1, 443, 004
Interest on gross debt	10, 645, 663 1, 443, 004 3.20 p. ct.
Interest on investment	2.00 p. ct.
Net interest on debt	2.00 p. ct. 2.76 p. ct.

'The financial statement for the year 1897-98 has been made public by the finance department, and the feature is that the net debt of the Dominion has risen from \$261,291,776 on June 30, 1897, to \$264,086,357, an increase of \$2,794,589. The revenue for the year was \$40,275,704 and the expenditure \$38,699,823, an increase in the former of \$2,466,357 and of \$364,737 in the latter, as compared with last year. The expenditure on capital account was \$5,546,293, an increase of \$1,834,682 over last year.

The following is the revenue on the consolidated fund:

Items.	1896-97.	` 1897-98.
Customs Excise Post-office Public works and raiways Miscellaneous	\$19, 478, 236 9, 170, 765 3, 226, 482 3, 570, 571 2, 363, 293	\$21, 731, 238 7, 871, 562 3, 528, 809 3, 872, 478 3, 271, 617

Total		5, 546, 293

The net increase of the debt since confederation has been \$188,809,955. No doubt all of this has not been wisely expended, but considering that during that period there has been expended \$167,314,384 on canals, railways, public buildings, wharves, and other public works, and that, besides this, the Dominion has assumed provincial debts to the extent of \$30,743,392, it is palpable that the margin of waste has not been a large one. These provincial debts, like that of the Dominion, were incurred by local expenditures upon public works of permanent value, as is also true of the main portion of the \$93,046,051 assumed at confederation, and these may fairly be set down as assets. From some of them a direct revenue is derived, while others benefit the commerce of the country to an amount far exceeding in value the annual cost of that portion of the debt incurred in their construction. Indeed, the industrial existence of Canada is largely dependent upon the public works, whose cost is represented in the Dominion debt.

Canada has much to show for her large expenditure on canals, rail-roads, and other public works. No other 5,000,000 people on earth have a better transportation system. The expansion of her trade and the development of her vast natural resources may be largely attributed to the facilities afforded by canals and railroads for traffic in the products of the country.

#### CHANGE IN POSTAGE RATES.

Canada is about to make an important change in her postage rates. After the 25th of December next there will be three rates of postage on letters, viz, 2 cents for Great Britain and her colonies, 3 cents for Canada and the United States, and 5 cents for foreign countries. If the experiment proves satisfactory the postmaster-general, it is understood, will then reduce letter postage for Canada and the United States to 2 cents.

The post-office department has recently sent to all newspaper offices throughout the dominion a circular telling publishers that after the 1st of January postage at the rate of one-fourth of a cent per pound will be imposed upon newspapers. After the 1st of July next the rate will

be half a cent per pound.

The act of the last session of Parliament, which reimposed postage upon newspapers, does not apply to weekly and monthly publications addressed to places not more than 20 miles distant from the place of publication, or included within a circular area 40 miles in diameter.

JOHN L. BITTINGER, Consul-General.

MONTREAL, October 14, 1898.

#### BRITISH COLUMBIA.

#### VANCOUVER.

The imports into this consular district during the year ending June 30, 1898, were very much larger than during any preceding year. A greater quantity of goods has been imported from the United States than heretofore. The following table gives the imports from the United States, approximately. There are undoubtedly considerable quantities of goods purchased from the United States in Eastern Canada and shipped from there to this Province, but I have no means of ascertaining the amount of such importations.

The very rapid development of the mining industry in this Province is increasing the demand for food supplies, machinery, and other articles which ought to be largely supplied from the contiguous States of the

Union, and are so supplied to a very considerable extent.

Imports from the United States to British Columbia, as nearly as it is possible to ascertain them, have been:

Foreign goods passing through the United States in bond	\$157, 865
Foreign goods purchased in United States markets, imported in bond	75, 246
Foreign goods otherwise than in bond	37, 394
Goods the product of the United States	3, 923, 076

On the 1st of July last the Canadian preferential tariff went into operation. This tariff provides for a reduction of 25 per cent upon the duties on goods brought from Great Britain and her colonies and other

absolutely free-trade countries. This preferential tariff has not been in operation long enough for anyone to know what effect it will have upon

importations from the United States.

Fruits and vegetables are brought into this Province from the Pacific States in very considerable quantities. The demand for such supplies is constantly increasing. There is a difficulty in regard to the importation of fruits and vegetables and similar commodities, which is the cause of much complaint in this city and in all portions of the Province, except in Victoria and the near vicinity. In the British North America act, under which British Columbia came into the Dominion, it is provided that—

The Dominion will provide an efficient mail service fortnightly by some communication between Victoria and San Francisco, and twice a week between Victoria and Olympia, the vessels to be adapted for the conveyance of freight and passengers.

Under our navigation laws an American vessel may not discharge freight at two Canadian ports. These vessels are required by the Dominion act to call at the port of Victoria, and the cargo, including fruit and vegetables, is discharged there and transferred to a Canadian vessel to be brought to this port, and thence to be transported by rail to the places in the interior. The importers of our fruits and vegetables complain bitterly of this, as they think there is unnecessary handling and delay, and the people of Vancouver in general feel there should be some arrangement by which importations of this character should be brought directly to this city. I am informed that if such an arrangement could be made the importation of this class of goods would be very largely increased.

I find the merchants of the city reluctant to give full information in regard to their importations, and it is not easy to obtain such accurate data in regard to the amount of American goods consumed here as I

would like.

I have suggested in former reports that American merchants and manufacturers make greater effort to canvass the trade in this Province. I think this could be done with profit, especially in regard to food supplies, furniture, mining machinery, tools, hardware, etc., and especially

agricultural machinery.

I do not find there is any prejudice worthy of mention against American goods. The merchants here seem desirous of making their purchases in the market where they can secure them at the most advantageous prices. As an offset to the very heavy Canadian tariff, the States of Washington, Oregon, Idaho, and California have the advantage of lower freight rates than Eastern Canada.

Exports from British Columbia.

Countries.	Mines.	Fisheries.	Forests.	Animals and produce.	Agricul- ture.	Manufac- tures.	Miscella- neous.	Total.
British Empire	8, 852, 368	\$3, 272, 888	\$385, 209	\$125, 843	\$92, 158	\$35, 638	\$61,550	\$4, 031, 510
Other countries		127, 796	356, 964	182, 002	11, 586	212, 078	446	9, 743, 310
United States		123, 137	33, 618	179, 896	1, 199	133, 998	446	9, 233, 518

The exports from this consular district during the last year were very much larger than during any preceding year. They consist chiefly of ores and precious metals. The exports of fish and lumber to the United States are very small, while the products of the mines nearly all go to the United States.

The people here are very anxious for the removal of the United States duty upon lumber. If this were done it would largely increase the exportation of lumber from this district to the Pacific coast States. The hope is expressed by many people here that the Joint High Commission, now in session, may make some reciprocal arrangement which will promote trade and commerce between British Columbia and the contiguous States of the Union.

The city of Vancouver has shown a most phenomenal growth during the past year. The Canadian Pacific Railway Company has erected a very magnificent station, exceptionally fine for a city of this size. It is estimated that new buildings to the value of \$1,254,000 have been completed during the past year, and other very substantial stone blocks

are in process of construction.

The increase in imports is \$1,450,518. There is a decrease in exports, owing to the destruction by fire of the largest sawmill here, of \$218,608. There has been an increase in the inland revenue at this port of

**\$315.819.** 

The tonnage in port and cleared here amounted to 1,807,356 tons, an increase of 371,100 tons. There was an increase in general mail matter of 33½ per cent; in Oriental mail matter of 33½ per cent; in Australian mail matter of 100 per cent; an increase in the revenue of the post-office of \$15,000, and an increase in the deposits of the Government savings bank of 25 per cent.

The estimated increase in population is 30 per cent, and in school population, 312. The population is estimated at 26,000. The revenue

of the city increased \$57,057.

During the year, four of the large Canadian banks have opened branches in this city. Two of them are erecting very large substantial buildings. A clearing house has been established by the banks.

Vancouver has now seven chartered banks, and another has secured

premises and will shortly open a branch.

A marine railway is being constructed and will soon be completed. Two hundred and seventy thousand square feet of streets were block-paved during the year. I am informed that applications for permits to erect 200 dwelling houses have been filed with the city clerk. Work will be commenced on the buildings as soon as spring opens. It is thought by some that there is danger of carrying building to an excess which might result in disaster, but it seems that at present every house and store in the city is rented, and every new building is taken as soon as it is ready for occupancy.

Vancouver is the terminus of the Canadian Pacific Railway. It is also the terminus of a branch of the Great Northern Railway, by which it is connected with the cities of Puget Sound, and there seems to be every prospect for a substantial and rapid growth of the city. The site of the city is very beautiful; it lies on a peninsula, and a range of mountains, snow-clad nearly all the year, runs along opposite the city,

and the view across the inlet is very fine.

#### MINES.

Mining is at present the principal industry of British Columbia. During the past year a number of mines have been developed to the point where they have become dividend paying, and work is going forward, not only upon these, but upon others which are believed to require development only to make them productive and paying. Gold, silver, copper, and lead are all found in great abundance. Most of

these minerals are in quartz ledges, and large capital is required to

develop them and put them into working order.

Quite recently, a very productive placer mining district has been discovered in the northwest portion of this Province, the Lake Atlin district, and it is expected a large number of persons will go into that district early in the spring. The mining laws governing placer mining in British Columbia are different from those in the British Northwest Territory, or the Yukon district. The claims which a placer miner may locate in British Columbia are smaller than those in the valley of the Yukon, each claim extending only 100 feet along the bed of a stream, running back to the hills. The claim must be recorded within three days after its location. The provincial parliament has just enacted a measure in which it is provided that none but British subjects shall be permitted to locate and work placer mining claims. Citizens of the United States will be shut out from the Lake Atlin district, as it lies wholly within the Province of British Columbia.

About 150 miles east of this city there is an enormous deposit of gypsum (plaster of paris). This is said to be of the very finest quality and is situated so that it can be mined with little difficulty and at slight expense. At present there is not sufficient demand to warrant the working of the mine, but it is expected by the owners that a market will be created within a short time and the mine put in full

operation.

Small quantities of platinum are found at different points in the Province, but thus far the amount exported has not exceeded in value \$15,000 a year. Owing to the increased demand for platinum, a number of persons have been prospecting with a view to discovering

larger deposits.

Coal mining is a very important industry. There are large mines worked extensively at Nanaimo and Wellington. At Cumberland the Comox coal is produced in large quantities. This coal differs from that of Nanaimo and Wellington, and is not so well adapted for stoves. It is better adapted for steam coal, and it is used by all the steamers that come into Victoria and this port, and large quantities are shipped to California. The company has lately opened a new shaft so as to increase their output. It has also erected 200 coke ovens, and provided apparatus for utilizing the by products—coal tar, etc. The Canadian Pacific Railway has placed a transfer boat on the line and takes twelve or fourteen freight cars to Union, a distance of nearly 200 miles; these cars are then loaded with coke, and the barge transporting the cars is towed to this port, where the cars are run upon the railway track and the coke is conveyed to the mining districts in the interior.

There are, in the eastern portion of the Province, considerable deposits of a very fine quality of coal, which is called anthracite. It is a very free burning coal, more resembling the Franklin coal than any other we have in the East. This coal is consumed to some extent in this city, although it is a long haul from the mine to this point. The town near

which these mines are situated is called Anthracite.

There is no question that this Province is one of the richest mining districts in all the world. New mines are being discovered constantly, and the development of the mining resources continues, giving employment to large capital and to large numbers of men. A very large proportion of the persons employed in these mines are citizens of the United States, and most of the mines have to a greater or less extent been developed by American citizens and American capital. The most important mine in the Kootenay district, the "Le Roi," was sold a short

time ago to an English syndicate. Previous to that time it had been owned in large part by Americans, and had been developed by them. The general feeling of Canadians is in favor of inviting American citizens and American capital to aid the development of the country. Americans find themselves treated in this Province, I think, as fairly as the Canadians themselves.

The only exception is the feeling given expression by the act excluding aliens from the placer mines.

#### Wholesale prices in Vancourer market.

#### MEATS.

Dressed beef, 64 to 7 cents per pound; mutton, 9 to 94 cents; pork, 74 cents; veal, 10 cents.

#### FRUITS AND VEGETABLES.

Current quotations are as follows: Lemons, California, \$3.75 to \$4 per crate; oranges, navels, \$4 per crate; seedlings, \$3; apples, local, 50 cents to 80 cents; Oregon, \$1.35 to \$1.50.

Vegetables are quoted as follows: Potatoes, local, \$9 to \$12; potatoes, Ashcroft. \$16; onious, silver skins, \$1.25 per 100 pounds; cabbage, \$1; turnips, \$1; carrots, \$1; marrows, 40 cents per dozen.

#### GROCERIES.

Current quotations by the sugar refinery are as follows:

Sugar, powdered, icing and bar, 6; cents per pound; Paris lumps, 6 cents per pound; granulated, 5 cents per pound; extra C., 4; cents per pound; fancy yellow, 41 cents per pound; yellow, 41 cents per pound.

Above prices are for barrels or bags or 100-pound kegs; half barrels, 50 pounds,

and 10-pound bags \(\frac{1}{2}\) cent more; boxes \(\frac{1}{2}\) cent more.

Sirup is quoted as follows: Finest golden, in 30-gallon barrels, 2\(\frac{1}{2}\) cents per pound;

10 gallon kegs, 2\(\frac{1}{2}\) cents per pound; 5-gallon kegs, \$1.75 each; 2-gallon pails, \$1.15 each; 1-gallon tins, \$4.50 per case of 10; \(\frac{1}{2}\)-gallon tins, \$5.25 per case of 20; 2-pound tins, \$5.25 per case of 48.

#### FLOUR, GRAIN, AND FRED.

Jobbers' quotations are: Flour-Hungarian, \$4.90 per barrel; Strong Bakers', \$4.60; Portland City Trade, \$4.50; Graham in 50s. per barrel, \$4.25; in 10-10s. baled, \$2.75. Okanagan flour is quoted as follows: Columbian Flouring Mills, Enderby, Two Star, \$4.10; One Star, \$3.50; Okanagan Roller Mills, Armstrong, Hungarian, \$4.75; Best Pastry and XXXX, \$4.60; Strong Bakers', \$4.10; Economy, \$3.70; Superfine, \$3.80 per barrel.

Rolled oats, 90s., \$3; National, in 45s., \$3.10; in 22 12s., \$3.30; in 10-7s., \$2.50. Grain—wheat, \$25 to \$26 per ton.

Feed—chopped, \$25 per ton; bran, \$18; hay, \$8 to \$10; shorts, \$20; straw, 65 cents per bale; oats, \$18 to \$20.

#### PROVISIONS.

Hams, 12 cents per pound; breakfast bacon, 12; to 13 cents; backs, 12 cents; dry salt, 9; to 10 cents; eastern creamery, 23 to 24 cents; dairy, 17 to 18 cents per pound; lard, 9 cents per pound in pails and tubs, and 9; cents per pound in 3 and 5-pound tins; cheese, 11 to 11; cents per pound, for large, 11; cents for small; Ontario eggs, 18 to 19 cents; local eggs, new laid, quoted at 55 cents per dozen; Australian canned meats, \$2.75 per dozen.

#### HARDWARE.

Bar iron—base, \$2.75; bar steel, Jessop's best, 14 cents.

Horseshoe nails, discount 40 per cent; horseshoe, keg, \$4.75; screws, discount 75

per cent; carriage bolts, 50 per cent discount.
Nails—base price: Cut, \$3; wire, \$3.25; rope, Manila, 121 cents; boiled oil, 68 cents; white lead, \$7; putty, \$3.50; barbed wire, \$4 per 100 pounds; glass, first break, \$4.25.

#### RETAIL PRICES.

Vegetables are quoted as follows:

Potatoes, local, 60 cents per 100 weight; onions, 3 cents per pound; white turnips, 20 cents per dozen; carrots, 20 cents per dozen; cabbage, 3 for 10 cents; green peppers, 20 cents per pound; beets, 1½ cents per pound; horse radish, 20 cents per pound; cauliflower, 10 cents each; green onions, 20 cents per dozen; cucumbers, 10 cents for 2; tomatoes, 20 cents per pound; beans, 5 cents per pound; celery, 35 cents per dozen; marrows, 5 cents each; Hubbard squash, 3 cents per pound; corn, 20 cents per dozen; Globe artichokes, 3 for 25 cents; Egg peanut, 4 for 25 cents; brussels sprouts, 19 cents per pound; Savoy cabbage, 3 for 10 cents.

Quotations for fruits are: Lemons, 25 cents; oranges, 35 cents; Japanese oranges,

75 cents per box; canteloupes, 40 cents; pears, 4 pounds for 25 cents; plums, 5 cents per pound; pineapple, 15 to 30 cents; grapes, 45 cents per basket; Concord grapes, 75 cents per box; bauanas, 35 cents per dozen; Cape Cod cranberries, 90 cents per

gallon; local, 40 cents.

gallon; local, 40 cents.

Prices for fish are: Spring salmon, 10 cents; codfish, 8 cents; smelts, 5 cents; flounders, 5 cents; fin, 20 cents; sea bass, 5 cents; soles, 8 cents; whiting, 8 cents; tommy cod, 5 cents; rock cod, 5 cents; crabs, 5 cents; halibut, 10 cents; smoked salmon, 12½ cents; salmon bellies, 10 cents; smoked cod, 10 cents; smoked halibut, 12½ cents; salt colichans, 7 cents per pound; skate, 6 cents; trout, 12½ cents.

Hens, live, \$6.50 per dozen; chickens, live, \$4.50; ducks, \$6 per dozen; turkeys, 22 cents; records.

cents per pound.

Ducks, mallards, 65 cents each; widgeons, 40 cents; teal, 25 cents; rabbits, 40 cents; New Zealand hares, 121 cents per pound; venison forequarters, 5 cents; hind-

quarters, 6 to 8 cents; leg, 8 cents.

Meats are quoted by butchers as under: Beef, roasts or steak, 10 to 16 cents per pound; veal, roasts, 121 to 18 cents; pork, 121 cents; mutton, leg or loin, 15 cents per pound; mutton, shoulder, 12½ cents per pound; mutton, stewing, 8 cents per pound; pork sausage, 121 cents per pound; beef sausage, 10 cents per pound.

#### FISHERIES.

Salmon.—The salmon fisheries in this Province yielded a very much smaller catch than in other years. The salmon caught in the streams here are packed and shipped to Europe and Australia, very few going to the United States. The government of this Province is making strenuous efforts to restock the streams and to keep up the supply. Province has a hatchery on the Fraser River, which turns out about 6,000,000 salmon fry each year. There is a great deal of complaint made here that the people of the State of Washington, near a point where the Fraser River flows into the Straits of Juan de Fuca, have placed traps, and in consequence the salmon have been caught and the run up the river greatly diminished. It is said here that the people of Washington catch in their traps a much larger quantity of salmon than they can utilize, and the fish are left to decay and go to waste. Just how much ground there is for this complaint I am unable to say, as I have not visited the section where these traps are said to be located. It seems to me that a conference might be had between the parties in interest on both sides of the line that might result in an arrangement satisfactory and profitable to both.

Halibut.—The halibut fisheries are being conducted in a manner which must undoubtedly yield a profit to those engaged in that industry. The halibut are very abundant in and about Queen Charlotte Sound. Steamers go from here, carrying a considerable number of boats and fishermen. One steamer a few days ago went out with about thirty fishermen, was gone only a week, and returned with 180 tons of halibut. This halibut is the finest I have ever seen. The fish are so plentiful that they do not fish in deep water for them, and therefore catch only the smaller fish, or the "chicken halibut," as they call them. Ice is taken on the steamer, and the fish when brought here are immediately trimmed and packed in ice and forwarded to the markets in our Eastern

Digitized by GOOGIC

States. The fish company has an arrangement with the railroad by which cars containing their fish are attached to passenger trains, thus going through in the shortest possible time. The New England Fish Company, which carries on the halibut fishery, has made arrangements with the Canadian and United States Governments so that it catches its fish beyond the 3-mile limit, and they are brought here and shipped through to points in the United States without the payment of duty to either Government.

Sturgeon.—Sturgeon fishing is carried on quite extensively. The fish are packed in ice and shipped to the Eastern States. They are quite different from those taken along the Atlantic coast, being without the

thick, heavy scales.

There are large quantities of other food fish in the waters adjacent to this Province. Codfish are found in great abundance, and there seems to be an opportunity for someone to make the business of packing the codfish profitable in a manner similar to that employed in the halibut fishery, or the fish could be taken and cured here. Undoubtedly a ready market could be found for them upon this coast, as well as in the East.

In the salmon, halibut, and sturgeon fisheries there is a very considerable waste of the heads, tails, fins, entrails, etc., that could be utilized at a profit. There is a company represented here now that has been formed for the purpose of utilizing the offal from the fish to make glue, fertilizer, etc. Just how far this company has succeeded I am unable to say. If it should go forward, it will afford a market for considerable quantities of the gypsum that lie in the interior of the Province, as quantities of plaster of paris are needed in the preparation of fertilizer from fish offal.

#### LUMBER.

There is a great abundance of lumber in this Province, quantities being close to navigable waters. The Douglas fir, or Oregon pine, is the most important. The trees of this variety grow to an enormous size, many to a height of nearly 400 feet, with a circumference at the base of more than 50 feet. The growth of timber is very great. It is not at all uncommon to cut 500,000 feet of lumber from an acre, while 20,000 feet is regarded, I believe, as a good cut in the East. The Douglas fir has about the same specific gravity as oak. It stands a very heavy strain, and is therefore well adapted for bridges and similar work. It is used here almost exclusively for building purposes. It is claimed that this wood is well adapted to making pulp.

The red cedar grows in great abundance and to very great size. In this section of the Province it is used extensively for making shingles and for inside finish. It takes a very high polish and is very beautiful. In the northern portion of the Province the yellow cedar is found. This has not been cut to any extent, although it is regarded as very valuable timber for many purposes, and it will undoubtedly come into

market at an early date.

In the interior of the Province the aspen poplar is found in considerable abundance. This and the white spruce, also found in the same

region, are both well adapted to making pulp.

The exports of lumber to the United States have been very small during the year on account of the tariff, and of course there is a strong desire for modifications, so that the market of the United States may be reopened to the lumber of this section. Several American vessels have loaded lumber at this port during the year for China, Australia, and South America.

## AGRICULTURE.

The agricultural productions of this Province are much less than are required to supply the people employed in the mines and other industries. A large portion of the Province is mountainous, very poorly adapted to agriculture, and all the land is so heavily timbered that it is extremely expensive to clear it. There are some valleys in the interior that are producing good crops, but the people of British Columbia must be dependent upon other communities for a large portion of their food supplies. Naturally the food supplies should come from the Pacific States. Meats, flour, fruits, and vegetables are coming in from the States in considerable quantities, but owing to the tariff the larger portio of such supplies is brought from eastern Canada. At present the mutton sold in this market is chiefly brought from Australia.

## PAPER.

There are three daily newspapers published in this city, several weeklies at different points in the province, and some weeklies and monthlies published here. I find that a considerable portion of the paper consumed here by these publications is imported from the United States. There is no paper manufactory in this Province, although there is abundant material, excellent water power, and facilities for manufacturing paper of all kinds, and these advantages would seem to invite some

capitalist to establish such an industry here.

I have made considerable effort to ascertain the source of the supply of stationery and other facts regarding that class of paper, but I find there is no wholesale paper dealer in this Province, and those engaged in the retail business are very reticent in regard to all questions relating to their business. I am satisfied, however, that a considerable portion of the better class of stationery comes in from the United States. There is a very large consumption of the coarser papers, used by the retail dealers for wrapping purposes, and also by the fishery and fruit-packing concerns. This class of paper also comes in large part from the United States. It seems to me that there is an opening for a wholesale paper concern, as well as for a manufactory of paper.

# THE KLONDIKE MINING DISTRICT.

During the past year a large number of people have passed through this city en route to the mining fields in the valley of the Yukon. Many were citizens of the United States. At the very beginning of the year these began to come in very considerable numbers. They all came to the consulate for information in regard to the mining laws, the routes by which the mining districts might be reached, and general information. At that time there were almost no mail facilities in that region, and I opened a registration book and arranged to take charge of the mail matter arriving here for citizens of the United States who had gone north, and for several months the office was overrun with inquiring On one day the number of persons who came to the office reached 200. I employed an extra clerk at my own expense, and gave him charge of the registration book and care of the miners' mail. This was attended to very methodically and with the very best results, and we have received thanks from large numbers of our Am rican miners who were in the far north. The improvement in transportation and mail facilities has been so great as to relieve us of much of the work which we were obliged to do during the early part of the year.

The "Lake Atlin district," already referred to, is much more easily reached than the valley of the Yukon, the climate is much milder, and

the facilities for working the mines much greater than in the more northerly district. The district is, however, closed to citizens of the United States. The provincial parliament has just enacted a law that none but British subjects shall be permitted to engage in placer mining within this Province. Of course, the quartz mining is still open to our citizens, but this will not invite such a large number of persons as would have gone if the placer mining had remained open to citizens of the United States. I regret the enactment of this law very much indeed. I fear that it will revive, to some extent, the hostile feeling which existed between the citizens of this Province and those of the cities on Puget Sound when I first took charge of the consulate. For more than a year that feeling has almost entirely disappeared and the most friendly relations have existed between the people on both sides of the border. At the time I first came here there was considerable complaint on the part of Canadians in regard to the customs regulations in Alaska, but that matter was soon adjusted and the treatment of our miners in Canada resulted in the most friendly feeling. I hope that the new policy will be altered.

#### FAILURES.

The failures of business firms in this Province during the past year were as follows: Number, 59; assets, \$560,247; liabilities, \$543,795.

## STEAMSHIP BATES.

At a meeting of the representatives of the various coast shipping firms, in the Pacific Coast Steamship Company's office in Seattle, the following schedule of charges for steamers operating with the Alaskan ports was fixed. The rates from this port will probably not vary very greatly from those given in the following statement:

Grand and an an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and an analysis and a

The above figures are for the two years ending December 31, 1897. The figures for 1898 will show a considerable increase over those for 1897, but they are not now obtainable.

# CONCLUSION.

Almost the entire mineral product of this country goes to the United States. The people of this Province need the productions of the Pacific coast States, and but for the Canadian tariff these supplies could be furnished more cheaply by the States than by eastern Canada.

I am hopeful that the Joint High Commission, now in session, will arrive at some reciproca' arrangement by which the farmers, manufacturers, and merchants of the Pacfic coast States may find a larger market for their goods in this Province than at present.

It seems to me that the merchants and manufacturers should make a much more earnest canvass in this market than they have yet done. I think that with proper effort trade between the United States and British Columbia could be very largely increased.

There are many opportunities for the investment of capital in developing the mining and other interests here, and these are open to citizens of the United States on equal terms with the citizens of Canada.

L. EDWIN DUDLEY, Consul.

VANCOUVER, January, 1899.

#### VICTORIA.

Referring to circular of August 5, 1898, I beg to state that since the report made from this consulate October 13, 1897, there have been no material changes in the commerce and industries of this consular district, save such as have been noted in reports forwarded from time to time during the past year. No variation has been made in charges for wharf privileges or licenses of any kind, and the general status remains the same as in 1897.

The looked-for prosperity and general business revival anticipated this year did not materialize. The travel incident on the discovery of the Klondike gold fields set in with the beginning of the year in immense volume, and for three months seemed to increase day by day. Every vessel that could be purchased, or leased, or patched up, was pressed into the service to carry enthusiastic prospectors and their

impedimenta. Not only were the transportation companies overburdened with business, but the merchants of Victoria enjoyed an immense trade, which was largely increased by the fact that the miners' licenses were to be obtained at the custom-house in this city, necessitating the calling at Victoria of many who would otherwise have "passed by on the other side." But with the spring the rush subsided as quickly as it had started, and trade fell off proportionately, while the vessels so lately crowded to excess were actually compelled to withdraw from the service owing to the lack of business. However, a fair amount of travel has been going north all through the summer months and a number of steamers are engaged regularly in plying between Puget Sound and this port and Alaska.

Victoria has daily connection with the United States by means of a first-class steamer of the Northern Pacific Railroad line, which makes the run to Seattle in five hours, to Port Townsend in three hours, and to Tacoma in seven hours. Numerous other steamers also touch here en route to the cities of Puget Sound, which with San Francisco steamers furnish regular service every fifth day. The service to Alaskan

ports averages twice a week.

## HARBOR IMPROVEMENTS AND SHIPPING.

No important improvements have been made during the past year in the Harbor of Victoria, which, while accommodating coasting steamers and sailing vessels of fair proportion, has not sufficient depth of water for deep-sea vessels. A comprehensive plan to deepen and improve Victoria Harbor and its approaches and reclaim tide-water land in the heart of the city, involving an expenditure of \$4,000,000, has been prepared by a local architect, and is strongly indorsed by the local press. But the scheme requires substantial aid from the Dominion Government, which has not been secured; consequently, nothing has been done in relation thereto, although strong hopes are indulged that the plan will ultimately be consummated.

Extensive improvements have been made to what is known as the "Outer wharf," situate at the entrance to Victoria Harbor, during the past year. Additions have been made to each of the wharves situate at this point, till now eight ocean steamers can dock there at the same time. The depth of water is always ample at low tide for the largest steamships that traverse the Pacific Ocean. The eastern wharf is now 120 feet wide and 1,000 feet long, and has a freight warehouse 60 by 721 feet. The western wharf is 100 feet wide by 750 feet long, and the freight warehouse thereon is 60 by 550 feet. It is claimed that these warehouses are now the largest and most complete on the l'acific coast.

The clearances at the port of Victoria during the year ended June 30, 1898, were as follows:

Where registered.	Number of vessels.	Tonnage.
Great Britain	286 928 7	Tons. 228, 945 716, 221 10, 286
Total	1, 221	955, 452

It will be seen that three-fourths of the vessels clearing outward

from this port carry the flag of the United States.

In addition to the above, during the same period, 1,491 British or Canadian vessels, with a tonnage of 533,889 tons, cleared from Victoria for different ports along the coast.

The clearances of vessels from Victoria during the past four years

ending June 30 were:

Year.	Number of vessels.	Tonnage.
1895. 1896. 1897. 1898.	1, 286 1, 386 1, 336 1, 221	Tons. 843, 878 927, 669 917, 608 955, 452

The past year shows a decrease in the number of vessels, but an increase of tonnage.

The clearances of vessels from Nanaimo, the great coal port of the

coast, during the past three years have been as follows:

Year	Number of vessels.	Tonnage.
1896	390	Tons. 803, 371
1898		824, 542 348, 918

## IMPORTS.

The imports into this consular district for the fiscal year ending June 30, 1898, reached the total of \$3,504,757, of which \$1,844,276 came direct from the United States. The records of the custom-house show how dependent Vancouver Island is on the United States for its daily food. All the live stock, animals, eggs, hay, cocoa, plaster, salt, condensed milk, etc., imported, come from the States, and as the population increases this fact must become more prominent, as agriculture is not and probably never will be an important element in the economic condition of this island.

The importations of bicycles, furniture, tinware, etc., present a notable increase this year. United States manufactures of these articles are preferred as superior in essential respects and, despite the tariff, are almost universally used. Especially is this true in regard to bicycles, and the trade is steadily increasing. The same may also be said of musical instruments, mattresses, electric-light apparatus, gunpowder, sporting goods, etc.

The printing presses and type used on the island are almost entirely of United States manufacture, and as population and business increase this must prove to be a good field for the type founders of the United

States.

## EXPORTS.

The bulk of the exports from this island consists of coal and gold dust. The former is mined on the island, where most extensive deposits exist. The exports of coal for 1898 reached \$2,525,337, of which \$2,433,757 were disposed of in the markets of the United States. The gold bullion and dust exported were brought here by miners and others from the Klondike regions, and nearly \$300,000 was sent to the United States for assaying and coining.

Exports from consular district of Victoria during fiscal year ending June 30, 1898.

Digitized by GOOGIC

#### NOTES.

The salmon pack of British Columbia, in which many business men of Victoria are largely interested, amounted this year to scarcely one-third the catch of 1897. That was an exceptionally good season, the pack amounting to 1,115,477, while this year the yield was 408,085 cases.

No changes have been made in quarantine regulations during the

past year.

Several stern wheel steamers were constructed here during the early spring for navigation on the Stikine, Skeena, and other rivers to the north, leading to the Klondike region. More were planned, but the rush north stopped almost as soon as hostilities were declared between the United States and Spain, and the result has been an almost total cessation of boat building for the present.

ABRAHAM E. SMITH, Consul.

VICTORIA, October 8, 1898.

# **ONTARIO**

## AMHERSTBURG.

I find, from figures furnished me through the courtesy of the collector of customs at this port, that the imports for the year 1897 were as follows:

# Imports into Amherstburg district, 1897.

First quarter Second quarter Third quarter Fourth quarter	14, 555
Total for 1897	100, 542

This shows a decrease from the preceding year of \$31,760.

# Imports for Amherstburg district, first half of 1898.

First quarter Second quarter	\$14, 108 33, 975
Total	48, 083 29, 373
Increase for 1898	18, 710

The above imports are from the United States. Those from other

foreign countries are very light.

The imports are varied, and cover nearly every class of manufactured goods. By far the largest single item is iron and steel, and articles manufactured therefrom. In spite of the high duties, the manufacturers of the United States have sold in 1897 over \$25,000 worth of iron and steel bars, tubing, fittings, stoves, builders' hardware, etc., in this district, containing a population of about 30,000, and I consider that the trade can be still further improved.

The importation of cotton goods, cordage, millinery, and fancy goods, hats and caps, articles of manufacture in which wood enters largely, is

also on the increase. Imports of bituminous coal are falling off, and those of trees and plants (amounting to about \$3,500 in 1897) are now prohibited on account of the San Jose scale.

# Exports to the United States from Amherstburg, 1897.

First quarter Second quarter Third quarter Fourth quarter	51, 851 41, 331
Total for 1897	280, 214

Increase for 1898	13, 071

This district being in such close proximity to the United States, the lines of goods on sale are practically the same as are sold at home. While the excellence of many of the articles manufactured in the United States is recognized, the Canadian duty impedes their importation. This is particularly true of boots and shoes, bicycles, textiles, etc.

No means of transportation have been opened in this district since the last annual report, and there are no regulations or laws that dis-

criminate against United States vessels.

This district is almost purely an agricultural one, the only manufacturing that amounts to anything being the making of elm staves, which industry is on the decline. There is one woolen mill manufacturing blankets and tweeds, but the product is all sold in Canada. There are several cheese factories, but none of the product is exported to the United States. All the surplus goes to England.

There was a mistake made in last year's report of cheese made in this district in 1896. The official report shows that, instead of 1,165,000 pounds, worth \$932,000, as reported from this consulate, the amount was 519,309 pounds, worth \$42,042. I have not been able to obtain the

1897 official report.

CHESTER W. MARTIN, Consul.

AMHERSTBURG, August 30, 1898.

# BELLEVILLE.

Considerable interest is being manifested in the mineral deposits which are known to exist in this consular district, but which have attracted little attention for the past twenty years.

Several gold mines are being worked, it is believed successfully; but as they are controlled by large English syndicates, who give out no information, it is not possible to state the results. The mineral deposits

In response to circular of August 5.

<sup>&</sup>lt;sup>1</sup> See Commercial Relations, 1896-97, Vol. I, p. 359.

which contain the gold consist chiefly of mispickel, with a large percentage of arsenic. The chief difficulty has been in reduction and separation. It is believed that lately this has been successfully accomplished.

Iron ore, hematite, and magnetic, as well as some bog ore, also exist here, the iron mines at Madoc and Marmora, about 40 miles north of this city, shipping several carloads daily to Hamilton, Ontario, to be smelted.

Mica is known to exist at several points in this consular district, but with the exception of a small industry at Birds Creek, 80 miles north of here, it is not developed.

Actinolite, which is used for roofing purposes, is produced to a limited

extent, a portion being shipped to Buffalo and Chicago.

A large deposit of lead is being worked near Queensboro, about 40 miles north of this city, and the owners, The Calumet Company, of Ottawa, I understand, are about to begin operations on a large scale.

Extensive quarries at Crookston, 18 miles north of this city, at Foxboro, 7 miles north, and at Point Ann, 4 miles east of Belleville, produce excellent limestone in courses from 1 to 6 inches in thickness, which is extensively used by the Grand Trunk and Canadian Pacific railways and the canals and other public works throughout Canada. At Point Ann quarries, blocks 100 feet square could be taken out if they could be handled.

Silver, copper, zinc, molybdenum, and other minerals also exist in this consular district, and I am collecting data for a comprehensive report on the products of this mineral field, to be forwarded in the near future.

## IRON WORKS.

Frank A. Mitchell, of Norwich, Conn., has entered into an agreement with the corporation of the city of Belleville to transplant his rolling mills (known as the Thames Iron Works) and consolidate with the Messrs. Abbot's rolling mills of Montreal, and begin the manufacture of merchant iron, railroad spikes, nails, spikes, and horseshoes. The new industry will be established in this city under the name of the Abbot-Mitchell Iron and Steel Company of Canada, Limited.

Charcoal iron smelting works, recently constructed by a local company at Deseronto, in this consular district, will commence operations within a few days. The ore which will at first be used has been procured from the Lake Superior region of the United States, but preparations are being made to smelt the ores which exist in abundance in the northern townships of this and adjoining counties, within 30 miles of the furnace and on the lines of railroad which penetrate the interior from Belleville, Deseronto, Trenton, and Kingston.

#### TRADE.

Statistics of the various lines of imports and exports for the fiscal year 1898 can not be procured in advance of their official publication, which has not taken place; however, the following unrevised statements have been procured, covering four out of the six customs districts in this consular district, as follows:

Imports from the United States to the port of Belleville for the fiscal year ended June 30, 1898.

Produce of the United States	\$161,529
Foreign goods in bond via United States	32, 187
Foreign goods purchased in bond in United States	3, 963
	.,

197, 679

# Exports to the United States from the port of Belleville.

Products of mines Products of fisheries Products of forest Animals and their produce Animals and their produce in bond en route to Europe Agricultural products in bond en route to Europe	6, 666 47, 043
Manufactures	
Total	267, 633

The total exports of the port of Belleville were \$977,274, of which \$709,641 (mostly butter, cheese, and eggs) went by the St. Lawrence River.

# Port of Deseronto, for the year ended June 30, 1898.

#### IMPORTS.

	United States.	Great Britain.	Total.
Free	\$23, 808 20, 813	\$329 6, 284	\$24, 137 27, 061
Total	44, 621	6, 577	51, 198

#### EXPORTS.

	United States.	Great Britain.	South Africa.	Total.
Manufactured goods	2, 749 2, 663	\$240, 427 1, 650		\$258, 507 150, 775 2, 749 2, 663 22
Total	164, 736	242, 077	7, 903	414, 716

# Imports entering the port of Picton, for the year ended June 30, 1898.

	United States.	Other countries.	Total.
Dutiable Free	\$16, 176 30, 621	\$24, 356 14, 074	\$40, 532 44, 695
Total	46, 797	38, 430	85, 227

The exports to the United States were \$64,149; other countries, \$58,941; total, \$123,090.

# Imports entering the port of Trenton, for the year ended June 30, 1898.

	United States.	Other countries.	Total.
Dutiable Free	\$17, 985 23, 734	\$10,748 4,144	\$28, 733 27, 878
Total	41, 719	14, 892	56, 611

Of the \$14,892 of imports from other countries than the United States the value of goods imported in bond through the United States amounted to \$6,747; via the St. Lawrence, \$4,001; total, \$10,748.

The exports to the United States were \$150,367; to other countries, \$52,986; total, \$203,353.

## MANUFACTURING IN CANADA.

During the past twelve months there has been a marked increase in the manufacturing industries of Canada, and particularly in the Prov-

ince of Ontario. The causes appear to be-

First. Following the accession to power of the Liberal party in 1896, the manufacturers, fearing a reduction in the tariff, curtailed production; but that fear was not realized, the tariff not being materially changed. In consequence the manufacturers are now pushing work to

replace depleted stocks, and great activity is manifest.

Second. Public works are being energetically prosecuted, notably the work on the Soulanges and Trent Valley canals, the deepening of the St. Lawrence canals, the purchase of the Drummond County Railway, the reconstruction of the Victoria Bridge at Montreal, the construction of new railways in Nova Scotia, and the construction of the Crow's Nest Pass Railway. These and other public and private enterprises have entailed a vast expenditure of money and given a great stimulus to various lines of industry.

Third. Preparation of supplies for the Klondike gold fields and extensive mining operations in British Columbia and different portions

of Ontario.

MICHAEL J. HENDRICK, Consul.

Belleville, November 1, 1898.

# HASTINGS MINERAL DISTRICT.

The geological formation of the "Hastings mineral district," which extends northward from the Bay of Quinte—on which Belleville is situated—for a distance of about 160 miles, and eastward and westward across this entire consular district, consists of the Trenton limestone formation, extending from navigable water to the vicinity of Moira Lake, a distance of 28 miles, where occurs a narrow belt of "bird's-eye" or Black River limestone, more shaly than the Trenton, the region beyond, consisting of Huronian formation, quartzites, conglomerates, dolomites, slates, etc., interspersed with syenites, crystalline limestone, gneiss, and granites, in which orthoclase feldspar is the predominating constituent.

The whole district has been subject to glacial action, and the valleys are, in most cases, covered with alluvial soils and gravels. The mineral deposits are found at or near the conjunction of the igneous rocks with the metamorphic, and generally within 50 miles of Belleville, with

railroads extending within a few miles of the mines.

GOLD.

The first discovery of gold in quartz, in the Hastings mineral region, was made in the summer of 1863, in the township of Belmont, county of Peterborough. For some time previous the existence of the precious metal in the Huronian rocks of this district had been known to the officers of the geological survey, but from such assays as had been made there was reason to doubt its occurrence in paying quantities, and the Government suppressed the fact, in the public interest; hence this discovery passed virtually unheeded.

In the autumn of 1866, however, the aspect of affairs was completely changed by the discovery of an extraordinarily rich deposit of gold in a

hill on the farm of John Richardson, in the township of Madoc. This property was, in July of that year, leased by local miners named Herbert Powell and Nicholas Snider, who some weeks later commenced to sink a shaft for copper. At a depth of 4 feet from the surface they found a pocket of black sand, and, not knowing what it contained, they took it to a jeweler in Madoc, who found it rich in gold. At a depth of 16 feet a much larger pocket containing the same material was struck, in a sort of cave 12 feet long 6 high and 6 wide. From this deposit 1 gallon of the sand was taken and was sold for \$2 to two men, who extracted from it gold to the value of \$200. From a soap box filled with a portion of the contents of the pocket \$1,000 in gold was taken. Other pockets of the same character were found, and here and there the rock was literally studded with gold, but no vein could be found, although successive lessees expended large sums of money in the attempt, and finally, after two years of fruitless labor, the Richardson hill was abandoned, after fortunes had been spent and ruin brought to many in vain attempts to gather wealth from its elusive riches. Subsequent attempts, made by small operators, with nothing but local knowledge to qualify them for their task, resulted in an equally disastrous manner; but, no doubt, further efforts will be made in years

The result, however, of the discovery of the historic Richardson mine, although disastrous to all who invested their means in its development and productive of considerable loss to thousands who flocked from all parts of the world to the new "El Dorado" on its fame being spread abroad, was of solid advantage. It caused the spread during the two succeeding years of an army of prospectors over Madoc and other townships east, west, and north, in which a number of prospects of gold-bearing quartz, in veins of from 4 to 12 feet in width, were located. What has proved to be the most important of these discoveries was made in 1868, on lot 6, in the eighth concession of Marmora, where pieces of quartz containing nuggets of gold were found on the surface. A vein of over 6 feet in width was developed by excavating a few feet below the surface, and traced for a long distance. The late Mr. W. J. Gatling (a brother of the inventor of the Gatling machine gun) about this time purchased a location on this vein, long known as the "Gatling Mine," and for several years worked it, but, owing to the refractory character of the ore, without pecuniary success. Specimens of these ores were exhibited at the Centennial Exposition, at Philadelphia, in 1876, and there awarded a medal and diploma.

The cause of failure in Mr. Gatling's operations was the presence of a large percentage of arsenic in the ores, which assayed from \$30 to \$40 per ton. In or about 1875 Mr. Richard P. Rothwell, editor of the Engineering and Mining Journal, of New York, headed a syndicate which purchased the Gatling mine and some properties adjoining, worked them extensively, and for three years labored unsuccessfully, their separation process—the chlorination process—proving inefficient, the greater portion of the gold going into the tailings, from which, after the company ceased operations, a large percentage of gold was recovered by hand working. At present the property is the seat of the chief gold-mining industry in the Hastings mineral district, and will be

spoken of more particularly in its proper place.

Following the discovery of gold-bearing quartz veins, a large number of prospects were opened and worked contemporaneously with the Gatling, but all proved unprofitable, although equally rich, and for the same reason. Of these may be mentioned the Dean and Williams, the

Feigel (now the Crescent), which was worked for three years by John McFee, of Belleville, the Gillen, the Dale, the Gladstone, the Bloomfield, the Hawkeye, the Cameron, the Pearce, and the Toronto Company's mine in Marmora, the Bannockburn, in Madoc, and the Barry, in Elzivir. These, together with the Craig mine, in Madoc, and other recent discoveries, are at present dormant. Prospecting has been going on actively during the past two seasons, and it has been found that gold exists in the townships of Rawdon, Huntington, Hungerford, Madoc, Marmora, Elzivir, Grimsthorpe, Tudor, Lake, Wollaston, Limerick, Cashel, Dungannon, and Faraday in the county of Hastings, in the township of Kaladar, in Addington County, in Belmont and other townships in Peterborough County, and in the county of Haliburton, a region of some 80 by 30 miles. As the district is penetrated by several railroads, with a fine farming country to the south, and even within its borders a large area of cultivated land, and as labor and fuel are abundant and cheap, the conditions are as favorable as could be possibly desired for the economical operation of the mining industry.

#### MINES AT PRESENT OPERATED.

In 1896 a new era dawned on the gold-mining industry in the district, when the Canadian Gold Fields Company (limited), an English company, leased the properties formerly held by the Consolidated Gold Mining Company, in Marmora. After testing the ore by the bromocyanide process of extraction, by which they found they were able to secure 92 per cent of the gold, leaving metallic arsenic to the value of about \$25 per ton in the crushings to be extracted from the tailings, they erected the necessary works and not only proceeded to operate on a large scale, but to purchase all the desirable gold properties they Their investment up to date, according to the most could secure. reliable authority, amounts to about \$750,000. In April, 1898, their reduction works were destroyed by fire, and since that time they have been occupied in replacing them. The new works, which are nearly completed, will differ in some respects from those which they will replace. They include a 10-stamp mill, to which another of the same capacity will be added in the coming spring. They will secure the coarse gold, most of which was lost by the former method of separation, by amalgamation, and the tailings will be put through the bromo-cyanide process for the fine gold, while apparatus for extracting the arsenic will form part of the plant. The company is at present employing 200 men, which number will be doubled when the works are in operation. The veins (now sunk to a depth of 180 feet, showing an increase in width as the level is lowered) consist of quartz which carries a mispickel containing 10 per cent of metallic arsenic. It assays from \$11 to \$30 in gold, averaging \$16 to the ton, of which \$11 per ton has been secured by the process heretofore in use.

The Cordova Exploration Company, another English concern, is operating what has been known as the "Belmont Mine," in the township of Belmont, Peterborough County, a few miles west of the village of Marmora and in the vicinity of where gold was discovered in 1863, as above related. The ore is a low-grade quartz, carrying 15 per cent of sulphurets, and yields \$8 per ton. The concentrates, which carry much gold, have not yet been worked up. I am told that the product is \$1,200 per week. A 10-stamp mill and 65 men are employed. What is known as the "Diamond mine," in the township of Madoc, has been worked for some time by Mr. D. E. K. Stewart, of Madoc, the

owner. Mr. Stewart states that the ore is quartz, containing a large percentage of mispickel, with free gold in nuggets visible in the quartz and in the mispickel, and that out of eight samples from the vein which he had assayed by the Trail Smelting Company, of Trail, British Columbia, the lowest assayed \$28 and the richest \$900 per ton, and that the provincial assay office in this city found similar results. Reports are rife at present of a very rich deposit of gold having been found on this property, but as yet I have not been able to verify their truth, and state the fact for what it is worth.

With the object of assisting miners in their quest for gold and other minerals in this region, the government of the Province of Ontario has established in the city of Belleville a public assay office and information bureau, under the direction of Mr. J. Walter Wells, B. Sc., which has proved to be of great assistance to those who have had occasion to call on him for information and assays. In a former report I gave infor-

mation of this, together with tariff of charges for assays, etc.1

Another establishment of a useful and beneficial character is the Toronto Smelting Company's reduction works at Madoc, under the management of Mr. W. A. Hungerford, who has been engaged in mining in this district since 1867. Custom crushing and assaying are done in these works, which are also turning out arsenic, matte, and mineral wool.

Of the diffusion of gold in numerous quartz veins throughout this district there can be no doubt, and it has been demonstrated with equal certainty that it exists in the great majority of the veins in paying quantities, provided a process suitable to its extraction from its matrice is used. The deepest sinking, so far, is 180 feet, in the old "Gatling;" others range from 90 feet to mere surface blastings. The truth is, as no doubt has been noted throughout this report, that this can not be called a "poor man's" gold field, as the production of gold requires large operations and considerable capital to make it successful financially.

ARSKNIC.

The extensive deposits of mispickel, or arsenical pyrites, offer inducements to investors, especially to those having practical experience in the manufacture of arsenical products and a thorough knowledge of the demands of the trade. The mispickel contains 46 per cent of metallic arsenic combined with iron and sulphur, and the deposits are mixed with gangue minerals, so that the deposits run from 12 to 40 per cent of metallic arsenic. The area in which deposits of arsenical pyrites are found extends from Flinton on the east to Marmora on the west, a distance of 40 miles, and several miles north and south, all within Hastings County and in this consular district, being about 30 miles from navigable waters, with three or four railroads running through it. Several deposits containing gold have been worked, and in the "Gatling," as related above, the mispickel is still abundant at a depth of 180 feet.

Arsenical pyrites is the raw material utilized in the manufacture of white arsenic, realgar, orpiment, paris green, used as vermin destroyers for cattle and sheep, potato bugs and plagues on vegetation. It is also considerably employed for hardening lead shot, as well as in other manufactures too numerous to mention.

The cost of extraction of white arsenic and other commercial products from the ore depends, as elsewhere, on the technical skill and

<sup>&</sup>lt;sup>1</sup> See Consular Reports No. 220, January, 1899. Advance sheets No. 273.

business ability of the managers. This district has the distinct advantages of cheap labor, abundant supply of wood, water, and farm products, and convenient railway facilities to navigable waters and the American markets. No attempt has been made to work the deposits for arsenic, as the German and English products have heretofore controlled the markets, but as the supply from those sources is falling off and is short of the demand, there is apparently an opening for the industry here, and it is claimed that this is the largest deposit of arsenical pyrites in the world.

#### SILVER.

Although the existence of silver in promising quantities in some of the gold-bearing veins discovered in the Huronian rocks and in some of the deposits of galena has long been known, no attempt has been made to mine this metal in the Hastings district. In the northern part of the township of Madoc is a vein of quartz carrying argentite, which assayed 122 ounces to the ton. This vein—in the Bloomfield gold mine, a mispickel prospect—carries silver to the value of from \$40 to \$60 to the ton. The Rhodes vein, in Elzivir, carries from \$16 to \$18 per ton in silver and from \$12 to \$18 per ton in gold. A deposit of galena, the extent of which has not yet been determined, in the township of Barrie has tested 60 ounces of silver to the ton. The galena elsewhere in this district contains generally a certain amount of silver, from 4 to 16 ounces to the ton.

### IRON ORES.

There are numerous deposits of magnetic iron in both the Laurentian and Huronian rocks of this district, the extent of several of which has been tested by diamond-drill borings and by actual mining. The ores vary from 46 to 70 per cent metallic iron, many being of grade suitable for Bessemer steel manufacture, while others contain small percentages of sulphur and phosphorus. Hematite and bog iron also exist and are being produced in this district.

As early as 1820 in Marmora, and 1837 in Madoc, charcoal furnaces for the treatment of the ores in these localities were erected, and produced both pig and bar iron of excellent quality, but the cost of transportation, viz, \$4 per ton over rough roads to Belleville, the nearest point on navigable waters, proved too high for profitable working, and

the furnaces were abandoned.

In 1880 and successive years shipments were made from the Madoc mines via Belleville, and from Coe Hill mines via Central Ontario Railway and by vessel from Wellers Bay, to the New York, Pennsylvania, and Ohio furnaces, but the imposition of 75 cents per ton duty by the United States in 1890 (now 40 cents per ton), along with the production of ore in the Lake Superior region of the United States, put an end to the trade.

In 1896 the Hamilton (Canada) coke blast furnace began purchasing ores from this district, and steady shipments have been made since, averaging 300 tons per week at present. Hematite and bog iron ores are known to exist in Madoc Township and elsewhere, but have not been worked to any extent, until recently, since 1885.

The Deseronto Iron Company is completing works for the production of charcoal iron which will have a maximum capacity of 70 tons per day and will be under way by January, 1899. At present the company is bringing its supply of iron ore from the Lake Superior region

of the United States, but the development of the iron mines in this section of Ontario and tributary to this point, by way of the Bay of Quinte Railway, the Kingston and Pembroke Railway, the Madoc branch of the Grand Trunk Railroad via Belleville, and the Central Ontario Railway via Trenton will eventually lead to the use of Canadian ores to the full requirements of the furnace.

Shipments are being made from the following mines in this district to the Hamilton furnace, viz: By Arthur Coe from the Welch mine (hematite) and the St. Charles mine and another property (both magnetic), all in the township of Madoc; the Wallbridge mine (hematite)

in Madoc, and the Dufferin mine (magnetic) in Marmora.

#### T.RAD.

A very large deposit of galena in Madoc is being worked by the Calumet Company, of Ottawa, Ontario, preparations having been made on a large scale. Galena exists in the townships of Barrie, Tudor, Lake, Marmora, and Limerick.

COPPER.

Purple, yellow, and gray deposits of copper have been discovered in Marmora, Madoc, Elzivir, Lake, Chandos, Barrie, and Methuen townships, but although they range from 7 to 33 per cent their reduction has never been engaged in otherwise than experimentally. One mine in Barrie is at present shipping the gray sulphite to New York in small quantities.

MICA.

Some deposits of mica have been found in Hungerford and Faraday; in the latter township a mine is being worked in a small way. I have heard that a gentleman from New York State has several properties in the Kingston consular district, county of Frontenac, which are being worked at a handsome profit; but although I have written to him asking information regarding them he does not seem to wish to give it. Other properties, I have heard, are being profitably worked in that county.

MARBLE.

Quarries at Bridgewater and Madoc were worked for some years, but are now idle, although the product was of good quality for building purposes and for the manufacture of lime. Marble beds also exist in Belmont, Marmora, and Limerick.

# ACTINOLITE.

This mineral is found in the townships of Hungerford, Elzivir, Grimsthorpe, and Kaladar in veins and bodies found in a band of serpentine which traverses that locality for many miles. The only workings of any considerable extent are at the village of Bridgewater and in the township of Kaladar. At the former place an opening was made on a vein 4 feet in width, and at a depth of 40 feet the vein had widened to 10 feet, while the quality has improved with the depth. For several years a mill for the grinding of actinolite and other fibrous material has been in operation at Bridgewater, and its product is shipped to the United States for roofing purposes. The product of the Kaladar mine is sent in its crude state to Staten Island, New York, and part of it is used, I understand, for wainscoting, its fireproof qualities, together with its very handsome appearance when polished, making a very fine material for this purpose.

#### CORUNDUM.

Corundum is the hardest substance found in a native state next the diamond, and is valuable as an abrasive. The deposits in this neighborhood extend over an area of 300 square miles and are nearly all controlled by the government of Ontario, which has withdrawn it from sale, and it can only be acquired by lease. This was done with a view of creating a home industry, and any person showing that he has sufficient capital to operate will, I understand, be given special privileges. The rental for the first year will be 60 cents per acre and for subsequent years 15 cents per acre. Full information can be procured by addressing Mr. Archibald Blue, director of the bureau of mines, Toronto, Ontario, or J. Walter Wells, B. Sc., assayer of the bureau of mines, Belleville, Canada.

#### LIMESTONE.

Limestone of the best quality abounds in this consular district. Large quarries are being worked within a few miles of this city, from which stone is taken for building purposes, canal and railroad construction, etc.

#### ASBESTUS.

In but two localities in this district have there been discoveries of asbestus, viz, in Elzevir and Marmora. The former is owned by the Standard Asbestus Company of New York, of which ex-Governor Campbell, of Ohio (now of New York), is president, and the latter by the North American Stone and Asbestus Company of New York. The mineral in the latter vein is of the chrysotile variety and the fibers do not exceed one-third of an inch in length. In the former it is about 1 inch long and is white and strong, but is harsh to the touch. No work is at present being done on these properties.

#### TALC.

Massive tale, or steatite, occurs in Elzevir and Kaladar, and the foliated variety has been discovered in Grimsthorpe in large veins. No extensive workings of these minerals have as yet been attempted.

# APATITE.

Deposits of apatite, or phosphate of lime, of superior quality are numerous, but all the mines are idle, as the products of the Carolina and Florida mines have control of the market, rendering operations here unprofitable.

#### ANTIMONY.

A considerable quantity has been found in the northeast corner of Hungerford.

## OTHER METALS.

Zinc has been discovered in the townships of Lake and Hungerford. Bismuth, molybdenum and nickel have also been found, the latter being a mere trace usually, excepting in Chandos, where it seems to exist in paying quantities.

# LITHOGRAPHIC STONE.

A belt of this mineral, which is found in Marmora township, has been at times worked by various individuals and companies, chiefly Americans, but is at present dormant. In 1893, a quarry 100 feet long and 50

feet wide was sunk to a depth of 25 feet by the North American Stone and Asbestus Company of New York, and was favorably pronounced upon. Stones 6 feet square, without a flaw, have been taken out.

#### PETROLEUM.

It has been believed by practical operators that petroleum underlies the Trenton limestone in the southern portions of this county, and surface indications have been pronounced by them favorable. Borings have accordingly been made from time to time, but without success. At present the Uanadian-American Oil Company of Philadelphia, Pa., is making a test in the city of Belleville. The drill has penetrated to a depth of over 600 feet and the company's experts pronounce themselves well satisfied with the prospects. At the depth of a little over 100 feet, a granitic rock was struck and through this the drilling has since been continued.

#### MARL.

Marl beds, which are practically inexhaustible, exist in this consular district, being situate about 30 miles north of Deseronto on the line of the Bay of Quinte Railway. These beds are practically controlled by two companies, the Rathbun Company of Deseronto and the Beaver Portland Cement Company of Ottawa, the former of which has a manufactory for the production of Portland cement, located at Napanee Mills, clay for the purpose being obtained near the mills. This mill has a capacity of 125,000 barrels per annum. The Beaver Company is building works at Marlbank which, I understand, will have a capacity of 400 barrels per day of Portland cement of 350 pounds net.

MICHAEL J. HENDRICK, Consul.

Belleville, December 23, 1898.

# CHATHAM.

In conformity with instructions contained in Department circular dated August 5, 1898, I submit the following:

This being what is termed an inland consulate, and there being nothing in the line of jobbing and wholesale houses within its bounds, my report will partake of an outline of the general business and industries

of Kent County, Ontario.

In the matter of exports the tariff act approved July 24, 1897, has had the effect of shutting out from our country such commodities as barley. beans, apples, hay, wool, and other products of the farm. And while this has been a detriment in one way to the Canadian farmer, it is not without its benefits in that it has taught him there is such a thing as diversified farming, which, in turn, has been the means of inducing capital to seek investment by starting new enterprises to consume the resulting produce. For example, prior to the enactment of the tariff law of 1897 large quantities of apples were exported to the United States. They are now purchased by three evaporating and fruit drying companies recently established in this city, which consume hundreds of bushels daily. The best grades of the hardier varieties are, however, packed for export to England, in which market, I am informed, they command a good price.

There is one extensive canning establishment located here which, as to tomatoes alone, has a capacity of 600 bushels per day. The output of this one article will reach 500,000 cans. In addition to tomatoes, corn, beans, and peas are canned by this same concern. Nearly the entire product of this plant finds a ready market at home. Some small shipments have been made to England, and as a result the demand exceeded the output, and this plant will be enlarged next year. Importations from the United States in this line are materially reduced.

Kent County is noted for its edible beans, which were largely exported to the United States before the enforcement of the 1897 tariff. The loss of this market is replaced by the heavy demands made from the mining districts of the great Northwest, as also from France and England.

Tobacco is being extensively cultivated in this district, probably more than in any other part of Canada. While the crop of last year was large and satisfactory, that of this season will be at least 100 per cent greater. Next season will see a greater acreage set apart for this industry. An effort will be made to grow the plant used in manufacturing cigars and smoking tobacco, though it is held that the climate will not permit it.

Exports from this consular district for the six months ending June 30, 1898, as compared with the same period in 1897, show a falling off in round numbers of \$41,000. At least \$34,000 of said amount is accounted for in beans, hides, and wool, shipments of which ceased with the 1897 tariff law. But for the three months ending September 30, 1898, as compared with the corresponding three months in 1897, there was an increase of \$28,808.85, owing to a larger export of staves and bolts, lumber, live stock, fanning mills, and bran.

With regard to imports, I can say but little, as the merchants of this city and district purchase from wholesalers in Toronto and Montreal. There is one exception, however. Dealers in glassware purchase their lamps, lamp chimneys, and table glassware from American houses direct, acknowledging that they get better prices as well as better goods than

in any other market.

The tendency of trade seems to be in the direction of Great Britain. This, in my opinion, is largely due to a feeling of jealousy of and unfriendliness toward the United States, and such tendency has been recently augmented by the preferential duty extended Great Britain on

the part of Canada, which took effect August 1 of this year.

The spirit above indicated is summed up in the expression, "Let us show the United States that we can get along without her and her goods, wares, and merchandise." There is no disguising the fact that this feeling is more extensive than is generally understood or admitted on the part of those in authority, who would doubtless have it other-

wise were it in their power.

I have frequently heard this statement made: "If you want a pair of boots or shoes of good quality, fit, and finish, you will have to go to Detroit to get them." In this city of some 10,000 population not one store carries boots or shoes of United States manufacture. The result is that thousands of purchases are annually made in Detroit by Canadians. Again, a short time ago a farmer called at this consulate and asked the duty on pumps. Having a copy of the Canadian tariff, I gave the desired information. After figuring a while the farmer said: "I want a pump of a certain kind, and they charge me \$50 for one made in Canada; but I can and will go to Detroit and buy one of American manufacture, which suits me better, pay the duty, and lay it down in Chatham and save \$14."

There is a mixture of prejudice and jealousy which is supposed to be loyalty to Canadian interests. The best element here, however, are in full accord with the United States.

CHAS. E. MONTEITH, Consul.

CHATHAM, October 22, 1898.

#### CLIFTON.

There has been a remarkable increase in the volume and value of importations from the United States to this port during the past year. For the year ending June 30, 1897, the total importations from the United States at the port of Niagara Falls, Canada, amounted to \$144,177. For the year ending June 30, 1898, the imports from the United States reached a total of \$678,728, an increase of over 400 per cent.

There are two causes for this great increase. The first undoubtedly lies in the new era of prosperity that Canada in general, and the Niagara frontier in particular, is now enjoying, and which dates from the spring of 1897. The second cause lies in the energy with which United States firms are cultivating territory that has for various causes been neglected in recent years. Firms that have never attempted heretofore to develop a foreign trade are now sending representatives across the border. The increase is not specially marked in any one line, but applies to all.

Previous to this year the importations and exportations have closely approximated each other. The exports from this consular district to the United States for the year ending June 30, 1898, are \$150,432.64. The exportations are growing, however, the total for the quarter ending October 31, 1898, being the largest for any quarter in the past seven

years.

The principal industries of the district are canning and the manufacture of paper and wood pulp, cotton goods, haircloth, saws, bicycles, incandescent lamps and transformers, suspenders, and acetylene gas machines. All report a decided and healthy growth within the past year. The increase in output ranges anywhere from 10 to 30 per cent. The canning industry reports an increase of 40 per cent. The bicycle works report a marked decrease in prices, but the increased output seems to compensate. Canada has made great strides in the past year in the manufacture of wheels, and the imports of bicycles from the United States has been somewhat checked in the past few months. There is one make of wheel in particular which dealers claim is the equal of the best made in the United States, and as it is sold 25 per cent lower, it has a decided advantage. Labor and materials are cheaper here and a number of American houses are establishing branches in Canada to better compete with the home manufacturers.

Canadians demand a good strong wheel, and many of the cheap bicycles that have been rushed on the market from the United States

have injured the reputation of all makes.

For bicycle parts and fittings Canada will for some time to come be

dependent upon the United States.

The output of the cotton mills is about the same as it has been for two or three years past, but a healthier tone in the business is reported. I have been making a special effort to discover some line in which I

could recommend greater activity on the part of United States manufacturers; but being right on the border, I find that there are now few openings that have not been recognized and taken advantage of. There is, however, one line which can be developed with very satisfactory results. There are two grades of flour on sale in this Province— Ontario flour and Manitoba flour. The former sells for about the same price as the standard grades of United States flour, while the Manitoba flour averages \$1 more per barrel. But while there is little difference in price between Ontario flour and United States flour, there is no comparison as to quality. Ontario soil is not adapted to the raising of wheat, and the flour is uniformly damp, almost sticky. The quantity of gluten is so much smaller that it takes from 30 to 40 per cent more flour to make the same amount of bread. This is not a theory, but has been demonstrated by actual tests. The Manitoba flour is much better, but is not the equal of standard United States brands and is higher in price. The difference in quality is explained in part by the superior mills in the United States.

Those who have discovered this great advantage are importing single barrels, the duty being 60 cents a barrel. All that is needed to build up a large trade is intelligent advertising of the great saving in flour

that can be effected. The bread is also of superior quality.

The Welland Canal, Canada's great artificial waterway, passes through this consular district. The past season has been the most successful in its history. The growth in the volume of traffic is uniform and steady, and it is now about self-supporting. The total cost of construction, up to date, has been \$24,173,352. A minimum depth of 14 feet, via the Welland Canal and the St. Lawrence, is promised for the navigation season of 1899, and that will permit of the passage of vessels carrying 75,000 bushels of wheat clear from Port Arthur and Duluth to the Atlantic. The largest cargo that can be taken by that route at present is 18,000 bushels. During the past year, only one bushel of Manitoba wheat out of five reached the sea by the St. Lawrence route, the great bulk of the crop going by way of Buffalo. If Canadian expectations are realized, the Welland and St. Lawrence route will be a much more serious competition for through traffic than it has been in the past.

The results of the British preferential tariff, which went into effect on August 1, 1898, have been watched with interest all over the Dominion. While Great Britain is granted a 25 per cent differential rate, the trade of the Dominion with the United States is not being seriously affected. In breadstuffs, coke and coal, hog products, dairy products, seeds, tobacco, and lumber England does not and can not compete with the United States. These items alone reach a total far

greater than England's entire exports to Canada.

Concerning railway supplies and rails, the following table, taken from the Canadian Year Book (just issued), is significant:

	1894.	189 <b>5</b> .	1896.	1897.
Imports from Great Britain	\$2,011,890	\$941, 285	\$727, 000	\$721, 217
	132,891	48, 846	421, 313	880, 029
Proportion: Great Britainper cent United Statesdo	93. 8	95. 1	68. 8	44.4
	6. 2	4. 9	36. 7	54.2

Such a record as that in four years, in a line in which England for years was supposed to be impregnable, gives evidence that even a preferential tariff will not turn the tide that has set in so strongly toward the United States. I am informed, on excellent authority, that the Grand Trunk Railway officials have decided to discontinue the building of their own engines, as they can buy them cheaper in the United States than they can make them.

The preferential tariff has, however, taken considerable trade in woolens away from Germany and returned it to the British manufacturer. Germany is making heroic endeavors to retain the Canadian trade, and in many cases is making a cut in prices for goods laid down in Canada which fully meets the advantage Great Britian has gained through the preferential rate. The Germans are very enterprising, and after they have once gained a foothold in new territory they will go to almost any length to retain it.

H. W. BRUSH, Consul.

CLIFTON, October 31, 1898.

#### COATICOOK.

#### SITUATION AND RAILWAYS.

The consular district of Coaticook lies along the eastern part of the boundary line between Vermont, New Hampshire, and Cauada. The territory is traversed by four railway systems, viz: The Grand Trunk Railway, the Canadian Pacific Railway, the Boston and Maine Railway, and the Maine Central Railway. No new railway lines have been constructed the past year, nor have any been projected. As this entire subject was quite fully covered in my report (published in Commercial Relations, 1896-97), it seems unnecessary to here repeat the information.

# IMPORTS AND EXPORTS.

The foreign trade in this consular district is entirely with the United States and Great Britain. The statistics embraced in this report are compiled from the official records at the principal customs ports, Coaticook and Stanstead. A comparative statement of the values of the imports and exports for each port, separately, is given, during the fiscal years ending June 30, 1897, and June 30, 1898, respectively, including a comparative summary showing the total volume of such business.

A consolidated comparative statement is submitted, showing the increase and decrease of the values of the various articles exported to the United States and Great Britain at the above-meutioned customs ports, for the fiscal years ending June 30, 1897, and June 30, 1898. There is also a comparative statement showing the values of the imports and exports for each of the above-mentioned ports, separately, for the first six months of 1897 and 1898, respectively, with a summary giving the total values of same.

In respect to the imports and exports at the port of Coaticook, the information is given in considerable detail, while at the port of Stanstead it was not possible to secure as complete information.

There is no marked change in the volume of the importations to this consular district from the United States and Great Britain for the year 1898. The total value of importations from the United States for the

fiscal year ending June 30, 1898, was \$514,179; for the fiscal year ending

June 30, 1897, \$496,566, total increase in 1898, \$18,613.

There was quite a noticeable increase in the value of some articles imported from the United States, such as animals, agricultural products, cotton, wool, iron and steel and manufacturers of same, machinery, oils, and settlers' effects. There was a decrease in the value of importations of drugs, dyes, and chemicals, and wood and manufactures of same.

The total value of importations from Great Britain for the fiscal year ending June 30, 1898, was \$70,175; for the fiscal year ending June 30, 1897, 48,355; total increase in 1898, \$21,820. The principal articles showing such increase were animals, cotton, iron and steel and manufactures of, wool, and worsted yarn. A decrease is noted in the value of the importation of oil, none having been imported from Great Britain this year.

The total value of exports to the United States for the fiscal year ending June 30, 1897, was \$655,833; to Great Britain for the fiscal year ending June 30, 1898, \$423,879. There was quite a noticeable percentage of decrease in the value of exportations to the United States of animals, hay, bark, and lumber and other products of the forest, and an

increase in the values of asbestus, sheep, and wood for pulp.

The total value of exports to Great Britain for the fiscal year ending June 30, 1898, was \$2,457,681; for the fiscal year ending June 30, 1897, \$960,545; total increase in 1898, \$1,497,136. This enormous increase in exports to Great Britain consisted chiefly of wheat and grain, in bulk, and wheat flour, all for transshipment at Portland, Me. By reference to the accompanying statement of "increase and decrease of exports to the United States and Great Britain," it will be observed that the increase in the value of exportations to Great Britain of wheat alone reached the large sum of \$1,241,945, while the increase in the value of exportations of other grain and wheat flour amounted to \$371,155. The increase in the item of butter was \$18,293, and in eggs \$24,824.

This enormous increase in the value of exportations to Great Britain via this port is due to the additional facilities provided by the Grand Trunk Railway system. All the exports to Great Britain via this port (amounting to \$2,457,681) were carried by this railway line. Extended improvements, in the way of elevators and other railway facilities, were established by this company at Portland, Me. I understand that a very large proportion of this business, now cleared at a United States port, was formerly routed via Halifax and St. Johns. To reach the port this railway line passes through about 175 miles of United States

territory.

I have not attempted to compile any figures to indicate the direct financial or other benefits, direct and indirect, accruing to the United States from this increased business, but have pointed it out as a matter which I believe worthy of special consideration and examination.

# GENERAL.

During the past year there has been no material change in industrial conditions in this consular district. Wages, banks and banking, commercial discounts, credits, and extension of sale of American goods were treated in my report last year, and reference to the same here would be but repetition.

Below will be found the various statistical statements referred to as

embraced in this report.

JOEL LINSLEY, Consul.

COATICOOK, November 28, 1898.

# FORT ERIE.

In making the annual consular report of this district, I would preface it by saying that it embraces only a narrow strip of the Province of Ontario, from Fort Erie to Port Rowan on Lake Erie, and extending 100 miles or so into the country. Its local commerce and industries are very limited, as there are no large cities or towns, and it is mainly an agricultural district. But owing to the Welland Canal, which makes a waterway between the two lakes, and the International Bridge which spans the Niagara River between Fort Erie and Buffalo, both of which are in this district, it becomes a gateway for the passage of immense quantitities of goods to all parts of the Dominion, and also to the United States, consequently the imports are mainly of goods in transit.

Manufactures are not exported to any great extent, the exports to the United States being mostly products of the farm and garden, as butter, eggs, poultry, and hay. Horses are exported in small numbers, and there is a somewhat increased exportation of cattle, lambs, and calves since the quarantine laws for live stock have been modified in the United States, but the high tariff now operative tends to greatly lessen business on these lines, and the same conditions in the Dominion of Canada affect importations from the United States. The most important imports in bulk are anthracite and bituminous coal, agricultural implements and machinery, coal oil, and bicycles. Small quantities of nearly all manufactured goods constantly cross the border.

## AGRICULTURE.

The condition of this district from an agricultural point of view is fairly satisfactory this fall, though the mild weather in winter and very early spring gave a better promise than was realized, as a very severe drought in July affected all vegetables and grains to a greater or less degree. The potato crop was less than the average. Corn yielded very poorly. Hay and oats were good. Fruit trees promised well in spring, but apples and plums were much affected by the drought, and red cherries were nearly ruined by "black knot." The peach crop of the Niagara peninsula, usually very abundant and profitable, was almost a failure. Among the industries of this district the nurseries at the village of Font Hill rank among the most extensive in Canada. They occupy more than 400 acres, employ in the season several hundred men, and the business is constantly enlarged and increased. quantities of ornamental trees and shrubs, fruit trees of every kind, and all manner of greenhouse plants are produced. The principal office is at Toronto, but the business extends over the whole country.

Another industry, now small but gradually increasing, is bee culture. Quite an extensive apiary is located at Ridgeway, near here, and large

quantities of comb and fine extracted honey are produced.

# NATURAL GAS.

Natural gas in seemingly inexhaustible quantities is found about 10 miles from Fort Erie. There have been a great many wells put down within a radius of a dozen miles; their average depth is 860 feet and diameter of hole 6 inches. The usual flow is about 2,500,000 cubic feet in every twenty-four hours. Nearly all residents of the village use it both for heating and lighting, and it might be used with great advantage for manufacturing purposes, if there were any establishments here. This gas is piped to the Niagara River, and there carried across by an 8-inch pipe laid on the bottom of the river, and thus a portion of the city of Buffalo gets a good supply. Bridgeburg, Fort Erie, and Buffalo are all supplied from some of the smallest wells. The future of this natural product can hardly be estimated. Though there are no factories of account in this district, good stores are found in all villages, and some of the larger towns show quite well-arranged and extensive stocks.

#### COMMUNICATION.

Telephone and telegraph connections are found in nearly every town and village, and near the frontier long-distance telephones are established.

The International Bridge, of which the Canadian end is within a few rods of this consular office, forms the principal channel of export from this section of the Province. It was built in 1873, Sir Cassimer Gzowsky, whose death has recently taken place, being the contractor. It is about half a mile long, 15 feet wide, with a swing draw, measuring 160 feet on each side of center pier. It is now simply a single-track railroad bridge. Three main lines cross it, viz: Grand Trunk, Wabash, and Michigan Central; also the Canadian Pacific cars operated by other lines.

On account of the steadily increasing traffic and the very heavy locomotives and loaded trains passing over it, it is considered inadequate to the demand, and antiquated in construction. Permission has been granted by both Governments to rebuild and enlarge it. It is thought work may be begun within a year; and plans, if carried out, call for a double-track railroad bridge on top, with foot and carriage

bridge and trolley-car tracks underneath. When this is done it will be of great benefit to this village for business and residential purposes.

Two steam ferry lines ply between the two villages of Fort Erie and

Bridgeburg and Buffalo.

The Welland Ship Canal traverses this district from north to south, uniting the waters of Lakes Erie and Ontario, and it is a portion of the system of inland navigation in Canada which extends 2,260 miles from the Straits of Belle Isle on the north Atlantic coast to Port Arthur at the head of Lake Superior. The canal is 263 miles long, 100 feet wide, and 14 feet deep. Through it pass large numbers of steamers, sailing vessels, and barges, mostly for freight, but owing to the low rates given on the railroads the business done by the canal is not nearly as large as in former years.

OSSIAN BEDELL, Consul.

FORT ERIE, October 14, 1898.

# KINGSTON.

In obedience to circular from the Department of State, of August 5, 1898, I submit my report on the industries and commerce of my consular district for the six months ended June 30, 1898:

The tendency to transship grain at Prescott and Ogdensburg convinced the citizens of Kingston that to retain the business, transship-

ment conveniences must be supplied.

Bonuses amounting to \$60,000 were voted by the taxpayers, and elevators with a capacity of 1,500,000 bushels have been built and are now in use. The city forwarders report that the elevators have enabled them to retain the forwarding business.

The vehicle works of this place closed down in June and the company went into liquidation. Stockholders say that the inferior work of surrounding factories and American competition rendered their products

unprofitable.

The engine works have just changed management. The cotton mill is asking for a bonus of \$25,000 and exemption from taxation for twenty years, for which the owners promise to increase their output from 20,000 to 40,000 pounds per week; otherwise they will close the factory. All of the large manufacturing enterprises of Kingston, with the exception of the woolen mills, give evidence of embarrassment.

The stone dry dock, with its superior facilities, is increasing the importance of Kingston as a place for the docking and repairing of

vessels.

The total importations at the port of Kingston for the year ended June 30, 1897, was \$1,047,429; for the year ended June 30, 1898, \$1,208,148; imports from United States for the year ended June 30, 1897, were \$872,448; for the year ended June 30, 1898, \$954,242. The great bulk of imports is from the United States. The leading articles are manufactures of brass, iron, and cotton. Our imports will not be shut out by the preferential tariff; certain classes of hardware, bicycles, dry goods, and many other articles will come from the United States. The close social intercourse between the people of this district and those of New York State has Americanized the customs and tastes of the people here.

The fact that the exports to the United States have largely decreased and the imports from the United States increased, indicates, in my opinion, that we may reasonably expect in the future to hold the trade in those cottons which are not furnished by the Canadian mills, and the hardware not supplied by German and Canadian factories. The imports from

Digitized by GOOGIC

the United States for the last year amounted to \$954,242, while the exports to the United States for the same period amounted to only \$138,296. The imports are increasing and the exports decreasing, which strengthens my opinion, already expressed, that Canada was selling her products largely to Europe but buying in the United States.

The Kingston cotton mill manufactures only brown cottons, of weight and qualities as follows: Counts of warp, 21½ skeins; counts of weft, 15 to 21 skeins; picks per inch, warp in loom, 42 to 48 skeins; picks per inch, warp on table, 46 to 52 skeins; picks per inch, weft, 44 to 52 skeins. The yards per pound range from 3.21 to 5.

M. H. TWITCHELL, Consul.

KINGSTON, October 15, 1898.

## GUELPH.

Reviewing the fiscal year which ended June 30, 1898, the district in which the Guelph consulate is situated would indicate a slight improvement in trade in general. The fees received at the United States consulate here show an increase of \$125, and the Canadian customs receipts on imports at this port an increase of \$6,707.94, for the six months since

January 1.

Though these figures show beyond a doubt that there have been more shipments made to the United States than in the previous year, and that far more has been imported, a thorough examination dispels the belief that the district is entering upon a healthy period of progress and gives rise to the fear that the next few months will show a corresponding decrease in all quarters. The high price of grain in the spring, caused by speculation based on the Spanish-American war, allowed a few shipments of bran to go from this district, i. e., 49 invoices against 12 for the preceding year.

The increase in Canadian customs receipts is directly traceable to the termination of the "reciprocal tariff" which existed between Canada and all the most prominent countries of the world, except the United States, from April 23, 1897, till June 30, 1898. The merchants, cognizant of its approaching termination, naturally imported to their fullest extent prior to June 30 from all countries, except Great Britain and her colonies, as on the expiration of the original treaty, which allowed the importer one-eighth, or 12½ per cent, rebate, the rebate on goods imported from Great Britain was increased to one-fourth, or 25 per cent.

The methods of packing and marking, collecting payments, and reaching the purchaser through commercial travelers are identical with those employed in the United States. Commercial travelers of any country may here follow their vocation without the payment of any license fee, and they receive a reduction in railway rates both as passengers and on sample cases. Though many of the articles of all kinds used throughout this district bear the mark of United States manufacture, they are, in the majority of cases, shipped here from the cities of Montreal, Toronto, or Hamilton, where they are imported by the jobbers or the American firms who have a Canadian distributing agent. There have been no new industries started in this district during the past year, but the towns west of here, i. e., Berlin and Waterloo, to which I drew attention in my last annual report, continue to increase both in manufacturing enterprises and population.

Owing to the "rate war" between the Grand Trunk Railway and the Canadian Pacific Railway, which has existed for some months, the small towns of Canada have suffered to the benefit of the larger cities, as the masses, taking advantage of the cheap rates, have made their purchases in the cities, where formerly they patronized the merchants of their own locality. The extent to which the cutting of fares was carried may be judged from the fact that prior to the rate war the fare from Guelph to Toronto and return was \$2.50; it has this summer been as low as 30

cents.

The cotton textiles used in this district are all either supplied by the Dominion Cotton Company or the Canadian Cotton Company, which firms are closely allied and control the cotton industry throughout Canada, I find no demand for different goods or complaint of those supplied.

CHARLES N. DALY, Consul.

Guelph, September 12, 1898.

<sup>&</sup>lt;sup>1</sup> In reply to circular of August 5. 
<sup>2</sup> Commercial Relations, 1897-98.

#### LONDON.1

The Canadian tariff act of 1897 greatly stimulated the manufacturing industries of the Dominion. The output for the past year has been extensive, and future prospects for trade are extremely good. Imports from the United States into this district have largely increased, and the present friendly feeling existing toward the United States insures a further increase during the coming year.

The quality of American goods imported is generally first-class, and in most lines they are considered superior to those from Europe. The increase in imports from the United States is largely in the following lines, in the order named: Agricultural implements, bicycles, iron, indian corn, and hardware. Other importations remain about the same. Many lines of United States goods are successfully competing with goods of home manufacture, and are selling strictly upon their

merits, especially high-grade articles.

The city of London is largely engaged in manufacturing. There are here about 60 establishments, some of which are very extensive, including boiler and engine works, brass and iron foundries, stove works, boot and shoe factories, furniture factories, barrel and stave factories, etc. Situated, as this city is, nearly in the center of western Ontario, it becomes the distributing point for a very large territory. Therefore the domestic trade is large and important. The city is in the midst of a fertile and productive farming country, the principal industries of which are stock raising and the extensive manufacture of butter and cheese. There have been good crops for the past three years, which were disposed of at fair prices, and the hopeful outlook in the United States, which necessarily affects conditions here, makes the trade exceptionally good at present. The principal exports of this district are hides and skins, breeding animals, barrels and staves, butter and cheese, chairs, school furniture, and caskets.

# EXCELLENCE OF UNITED STATES GOODS.

Not only does the quality of our goods recommend them to the Canadian trade, but the style and finish are admired above those of other foreign manufacture. The tastes of the Canadian people are more strongly American than European, and by reason of the fact that our commercial laws and methods of business are similar and our money and currency the same, they prefer to trade with the United States. As a general thing, such goods as are imported from the United States arrive in good condition. In the line of boots and shoes all the best goods on the market are of United States manufacture. The same is true of furniture. American patterns are used extensively, and much of the highest-priced furniture is imported from the United States. The excellent quality, finish, and cheapness of our bicycles have given them an extensive sale all over the Dominion. They are usually sold under the name of the jobber.

# AGRICULTURAL MACHINERY AND BICYCLES.

The Deering Harvester Company, of Chicago, has its main office for this province here in London. It will put out this year nearly 4,000 implements, while the Osborn and McCormick companies are doing an extensive business in eastern Ontario. The principal Canadian companies are the Massey Harris Co., Toronto; Frost & Wood, Smith Falls;

Maxwell Company, St. Marys, and Noxon Company, Ingersoll.

A jobber of United States bicycles here informs me that he will dispose of at least 4,000 wheels this year. There is a demand for a cheap wheel, such as can be produced only in the United States. These wheels are giving good satisfaction. Many of the wheels of Canada, outside of the high-priced ones, are made of United States parts. The American wheels generally bear the stamp of the Canadian iobber, but otherwise they retain their name and identity.

# OPENING FOR CERTAIN LINES OF GOODS.

While there are numerous factories for the manufacture of carriages and buggies, yet there are no up-to-date styles on the market, and I see no reason why the latest styles of vehicles should not be successfully introduced here. I believe our manufacturers could pay the duty and yet put their high-class goods upon the market here at such a figure as would insure large sales.

As to our corn products, while the people here seem to be familiar with the availability of this grain as an article of human diet, yet outside of canned corn, which is put up extensively in this province, one

seldom sees it in any other form.

Cotton-seed oil is only found in drug stores, and sells at a greatly

advanced price over the same product in the States.

Kerosene oil and gasoline are of poor quality and high priced, while barrel or butter crackers are an unknown quantity in this part of the Dominion.

# TRANSPORTATION FACILITIES.

Besides the Canadian Pacific, Grand Trunk, Michigan Central, Huron and Bruce, Lake Erie and Detroit River railways and their various branches which center here, the city of London and all this part of Ontario will greatly profit by a new and important car ferry just established between Conneaut, Ohio, and Port Stanley. This line opens up to this territory the coal fields of western Pennsylvania and eastern Ohio by direct communication over the Pittsburg, Bessemer and Lake Erie Railroad and the Loudon and Port Stanley Railroad. This route will, in time, also directly reach the great copper and nickel mines of the celebrated Sudbury district. It is expected that this new line will greatly reduce rates and thereby lessen the price of coal and other commodities shipped from the United States throughout western Ontario. The distance from Conneaut, Ohio, to London is only 70 miles.

# COTTON TEXTILES.

Of the coarser cotton textiles on the market, most are of Canadian manufacture. A few brands of United States origin are seen, such as Dwight Anchor white sheetings and the Amoskeag A. C. A. tickings.

The gray cottons of Canadian make run as follows: 2.85, 3, 31, and 31 yards per pound, 36 inch; 31 and 4 yards per pound, 32 inch; 41 yards per pound, 30 inch.

All these are about the same in texture as muslins in the United States, and are put on the market at about 15½ cents per pound.

White muslins cost 21 cents per pound and tickings 24 cents.

Principal articles of import from the United States.

Coal, cotton, hardware, iron, glass, paper, bicycles, machinery, agricultural implements, books, hats and caps, rubber goods, drugs, jewelry, woodenware, sugar, molasses, brass goods, cigar labels, breadstuffs, boots and shoes, fruit, brushes, plated ware, leather, tobacco leaf, indian corn, watch movements.

Principal articles of import from Great Britain.

Rice, cotton, hosiery, curtains, drugs, fancy goods, damask, hats and caps, gloves, hardware and cutlery, iron, leather, spices, plumbago, oilcloth, colors and paints, wall paper, etc., pickles and sauces, silk fabrics, ribbons, velvet and velveteens, granite, sugar, dress goods, wool clothing, carpets, liquors, hides and skins, tea, soda biscuit.

HENRY S. OULVER, Consul.

LONDON, September 27, 1898.

# MORRISBURG. 1

The United States is rapidly taking the place of Great Britain in supplying articles such as bicycles, hardware, machinery, and agricultural implements. Owing to the fact that transportation facilities between the United States and Canada are improving, the trade heretofore going to Great Britain is fast being transferred. As Canadian firms become known, they get better terms and better goods, which tends to increase trade between Canada and the United States. Great improvements have been made in the last six months in the telegraph service, and the long-distance telephone is now widely used in Canada.

Transportation in this section is of the best, the St. Lawrence and Ottawa rivers, the Grand Trunk Railroad, and Canadian Pacific Railway furnishing all necessary means to insure quick and rapid transfer to any part of the country; and with the new line from Ottawa to New York, in connection with the Canada and Atlantic, the system seems perfected. There has been no material increase in freight rates during the six months previous to June 30, 1898.

Penny postage will be established between Great Britain and her colonies after December 25, 1898. Five cents is charged in addition to postage on all registered letters.

Licenses are not required for carrying on any business, except for the sale of spirituous liquors. Licenses for carts, trucks, and peddlers are in some cases granted by the incorporated townships, and in others by the provincial government.

Commercial travelers are not required to take out license in this district, but they are in some parts of Canada. No marks are required on goods

The information requested as to cotton textiles, etc., can not be obtained here, as the local dealers trade through commission houses.

JOHN E. HAMILTON, Commercial Agent.

Morrisburg, October 25, 1898.

<sup>1</sup> In reply to circular of August 5.

#### ORILLIA.

There are practically no wholesale or jobbing houses in this district, and few direct importers of goods from the United States. A large amount of merchandise of American production or manufacture is consumed in the district, but is procured from importers in Toronto, Hamilton, and Montreal. Several retailers here import directly from England and Germany to quite an extent.

Commercial travelers from the United States cover this district more or less. In conversing with leading business men, however, some of whom admitted a preference for "Yankee drummers," the claim was made that it was nearly impossible to maintain satisfactory business relations with them, owing to the infrequency and uncertainty of their

visits.

Many articles of United States manufacture are now used, and more could be added by systematic and energetic exhibition of goods. Chenille curtains, white cottons and cotton prints, muslins and muslin prints, cambrics, flannelettes, and fleece-lined underwear come largely from the United States. Cotton prints, selling at from 4 to 12 cents per yard, are very popular. Dress goods, mantle and garment cloths come

largely from England and Germany.

Some boots and shoes from the United States find their way into the district, and the trade could readily be monopolized if it were pushed. Several retailers have spoken of a desire to get an agency direct from the manufacturer for an American line of boots and shoes. Canadian shoes do not equal ours; they are not so stylishly finished, nor do they retain their shape as well. By exercising care and striving to please the retailers there is an excellent market here for manufacturers in this line. American boots command a better price than Canadian ones. Clothing is wholly of Canadian manufacture, but quite a number of hats from the United States are sold here.

Articles in the grocery line imported from the United States are starch, canned meats and soups, dressings, fancy biscuits, dessert

preparations, soaps, and washing powders.

Some American bicycles are used, but not many. Bicycles are ridden here by all classes. Lamps are mostly of United States manufacture, as well as table glassware, celluloid goods, toilet cases, and fancy articles, druggists' lines in rubber goods, patent medicines, and machine oils.

All sterling silver goods and nearly all watch movements come from the United States, and many watch cases, clocks, umbrellas, and canes.

Typewriters, with the exception of one or two inferior machines, are entirely from the United States. The demand for good, medium-priced machines is rapidly increasing. This is an important market for manufacturers of agricultural implements, and one of the great firms in the United States is an active and successful competitor of Canadian houses despite the 20 per cent duty.

The farmer in this district desires the latest and best agricultural implements. The demand is constantly increasing, and this is a promising field for high-grade machines of United States manufacture. Mowers, reapers, binders, cultivators, spreaders, and straw cutters are

now imported.

In selling goods by sample great care should be exercised, and goods

when delivered should be of the same quality as the sample.

Orillia is a subport of entry, and the imports for the six months ended June 30, 1898, amounted, approximately, to \$700,000, of which

fully 70 per cent came from the United States; but much of that was coal (which is wholly from the United States), and a considerable value was in household goods. There are a large number of settlers from the United States in this vicinity.

The principal exports from this district to the United States are

lumber, shingles, nickel matte, and live stock.

Previous to the enactment of the present tariff law most of the high and medium grade lumber from this district was exported to the United States. That trade is now largely restricted. Until quite recently the lumber business was very dull here, but mill owners now claim to have secured other markets, and business is very good. It is said that they have entered markets formerly supplied entirely by the United States. Shipments are made from this district to Jamaica and other West Indian islands, to South America, South Africa, England, and Continental Europe. I have received many letters from business houses in the United States, asking for commercial information, all of which have received immediate attention.

Exports from this district for the six months ending June 30, 1898,

were as follows:

Articles.	Value.	Articles.	Value.
Bone. Cattle Fish Furs Hair Lumber	3, 585. 00 1, 415. 25 366. 25 313. 58	Personal effects	330.00

This does not include consular agencies.

ERNEST A. WAKEFIELD,

Commercial Agent.

ORILLIA, November 28, 1898.

# PALMERSTON.1

As the consular lines of this district do not correspond with the Canadian customs lines, and as all the Canadian customs offices in this district—six in number—are merely outports of principal offices at Stratford, Goderich, and Guelph, the recorded imports into this district can not be separated from those of the other consular districts mentioned and can only be obtained by combining the imports as reported from the three consulates referred to, the result representing the four consular districts. It will thus be seen that the consular officer here is at a serious disadvantage in regard to reports of this character. In making up this report for 1897 these six outports were visited in turn, but only to find that statistics were not kept after the returns were made to the offices to which they were subordinate. Then the principal offices at Stratford, Goderich, and Guelph were visited, only to find that returns from outports, when received there, were incorporated into the business of the principal office, and no independent returns from such outports were retained.

<sup>&</sup>lt;sup>1</sup> In reply to circular of August 5.

Attention is again called to the fact that probably 75 per cent of all imported goods are bought from importers doing business in the large commercial centers of Canada, so that even if the details could be obtained from these outports, they would indicate very little as to the actual consumption of imports here.

Palmerston being a railway junction where all exports are registered for purposes of tracing, it is possible to find their value, though this can not be done accurately, since the values of exports are not given in the records on file in such places, and waybills, showing the values, are only to be found at the head offices of transportation companies.

The principal items of import are machinery, coal, rawhides, grains for seeding purposes, leaf tobacco, wall paper, hardware, cotton goods, marble and freestone, oysters, refined coal oil and products of petroleum, broom corn, electroplated silverware, galvanized and other iron products—such as wire, tubing, hoop, rod, and castings—steel bars (round and flat), drugs, books and printed matter, electric light supplies, hops, jute, cloth, jewelry, garden seeds, sewing machines and bicycles, shoddy wool, school supplies, artificial flowers, glue, printing type, oats for milling, and corn for ensilage and for grinding. More than two-thirds of these imports have been from the United States; the other third came chiefly from England, and only a very few from any other country. The principal imports from Great Britain are dry goods, clothing, water-proof garments, fur goods, silks, fabrics, buttons, trimmings, millinery goods, oilcloths, linoleums, carpets, rugs, and musical instruments.

The export trade of this district with the United States has been furnished in the quarterly returns from this office. The export transactions with Great Britain and the rest of the world (outside the United States) during the year 1897 and the first half of 1898, to June 30, are tabulated and inclosed herewith.

United States machinery and the higher grades of American wall paper are very popular here, and the same may be said of our hardware, ornaments for cabinet purposes, posts used in the construction of pianos and carriages, locks and tools of all kinds, boots and shoes, cotton goods, surgical instruments, chemical apparatus, patent medicines, drugs, jewelry, veneers of wood, and books. Owing to the reduction in duty of 25 per cent in favor of English productions, it is feared that there will be an increase in the consumption of the goods produced in that country, as well as the other countries more recently included in the preferential arrangement, and a consequent decrease in the importation of United States products. There are no objections to American products or the manner of packing or preparing them for market. Canadian agricultural implements are being used here because they are cheaper. No one claims that it is because they are superior.

LOTON S. HUNT, Commercial Agent.

PALMERSTON, November 1, 1898.

Exports from the consular district of Palmerston for countries other than the United States.

# FROM JANUARY 1 TO JULY 1, 1897.

a Very large quantities of cheese and butter are taken from this district to cold-storage points in Canada, whence they are reshipped to England as market warrants, no export entry on such being credited to this district.

5 Fully 90 per cent of these articles are for the English market.

# PORT HOPE.

The year ending June 30, 1898, like those that have preceded, has a statistical history to be presented, showing the figures of the past year and giving the problems that are to be worked out in the future.

The year has been fairly successful from a business standpoint, good

crops are promised, and the outlook for the '98 harvest is better.

There has been no great improvement in manufacturing interests or building in this district outside of the city of Peterborough, though railroads have prospered, and the few vessels on the lake in this vicinity have not been idle.

### HARBOR IMPROVEMENTS.

Improvements in the excellent harbor are contemplated. The rebuilding of many of the piers, and dredging the harbor and channels, so that the largest vessels on the lake may find easy entrance, are among them.

# EXPORTS AND IMPORTS.

The declared exports in this consular district show a falling off of 53 per cent over those of 1897. This is made up from numerous articles of merchandise, barley, pease, lumber, wool, and hides showing the greatest losses. A table accompanies this report giving the articles and amounts for the two years.

The imports, as furnished from the custom-house in this place, show a slight increase over the year ending June 30, 1897, but the change in the list of merchandise brought in is so small that only a general sum-

mary is given.

A considerable amount of American manufactured goods is sold in this district, though only a limited quantity is imported direct, as the dealers here purchase from the wholesalers in the large cities. Several retail dealers are showing large stocks of lamps, chimneys, etc., bought of an agent and shipped direct from the manufacturer. This plainly shows that American goods can be sold in Canada by soliciting custom through agents. A merchant who personally imports a line of goods from any country rarely fails to announce that fact through his advertising, and to give him that opportunity it is only necessary to show him the goods. The superiority of United States articles is admitted on all sides. The clumsy imitations that are made by foreign manufacturers show that the demand is for the neat and perfect American article.

# NAVIGATION.

There is a Canadian steamer line from Charlotte (Rochester), N. Y., to Cobonrg and Port Hope, running daily during the season. The distance is 62 miles, requiring five hours for the passage, and the fare is \$2.50 one way. There is a heavy summer travel, mostly Americans, sportsmen, and summer boarders. A steamer that could reduce the time by an hour or an hour and a half, with a proportional discount in fare, would be hailed with delight by the hundreds of American visitors, as well as by the thousands of Canadians.

The Richelieu and Ontario Navigation Company's steamers, between Toronto and Montreal, have for years made Port Hope and Cobourg calling places on their daily trips. It is now reported that next season the boats will follow the south shore of the lake, touching at Charlotte and Oswego for American traffic, while weekly or semiweekly trips by other boats belonging to the company will operate the old route.

The Canadian navigation laws do not allow a foreign vessel to carry

passengers or freight between any two Canadian ports; consequently an American steamer, coming on the line mentioned, would clear from Charlotte to Port Hope via Cobourg, but do no business between the two Canadian ports.

# PORT HOPE AND COBOURG.

The two towns of Port Hope and Cobourg are situated on the shore of Lake Ontario and are but 6 miles distant from each other. They have, together, a population of 10,000, about equally divided. They are on the main line of the Grand Trunk Railway, with connection at Port Hope with the Midland Division of the same line. There is also a gravel road between the two villages, constructed and owned by a private corporation, and for riding or driving an animal over it a toll is charged. There are roundabout roads by which the tollgate may be avoided, but at certain seasons of the year they are difficult to drive over.

The towns have at times proposed to buy and make free the "gravel road," but an agreement as to price could not be reached. The towns

have also talked of building a beach road.

Surveys and locations have been made for a branch line from the Canadian Pacific at Madoc to Cobourg, bonuses have been granted by the Dominion Government, and the towns through which the road would pass have voted aid. It is understood that the bonds for its completion have recently been floated in England, and the residents of Cobourg look for its early completion. The road would be about 50 miles in length and would run through a rich farming country.

During the prosperous years that followed the close of the civil war in the United States many costly mansions were built in both Port Hope and Cobourg. Business depression threw many of them on the market, and they were bought by Americans, the result being that Cobourg has become a great summer resort for citizens from the United States, having an American colony of nearly five hundred the present season. Private houses are opened to visitors and several summer hotels are filled. Port Hope is slowly drifting in the same direction, as more Americans come to the town every summer.

The two places, although located so near each other, differ most materially in physical character, Cobourg and its surroundings being very level, while Port Hope is built on a series of hills, from which in any direction the visitor may gaze upon those charming views that

well justify its name of the "prettiest town in Canada."

The intercourse between the two places is so limited as to occasion comment from a stranger. A toll road does not encourage travel; the railroad stations are located too far away from the business centers; trains are not run at frequent or convenient hours, and a railway fare of 4 cents per mile seems exorbitant.

Neither place is a manufacturing town, as the word is understood in the United States, though each has its small industries. Port Hope. has extensive water power, though comparatively little is utilized. The upper fall is estimated at 100 horsepower, and there are four of less extent, the last rating over 75 horsepower.

#### ELECTRIC CARS.

It seems to me that here is one of the best openings on this continent for United States capital in installing an electric railway plant. Six miles of road, passing near the shore and beach of the lake, 5,000 inhabitants at each terminal, and a summer increase of large proportions.

The franchise of streets and outside roads, or right of way, can be secured at reasonable rates. Outside the limits of Port Hope there would be but a fractional per cent of grade along the whole line. It is possible that the water power here would furnish all the force needed to operate the whole line.

HARRY P. DILL, Commercial Agent.

PORT HOPE, November 2, 1898.

Value of exports declared from the Port Hope consular district for the two years ending June 30, 1897 and 1998.

Total	40, 493	15, 214	114, 234

# SAULT STE. MARIE.1

The principal exports from this district consist of products of the forest. The following figures show the chief exports for the six months ending June 30, 1898, and also for the corresponding time in 1897:

	1898.	1897.
Pine saw logs.         feet.           Pine lumber.         do.           Spruce pulp wood.         cords.           Wood pulp (dry ground)         pounds.	10 004	20 207

The decrease in the export of pulp wood is said to be caused by the fear existing at the time of cutting that a duty might be placed on it either by Canada on export or by the United States on import. In this connection I would say that spruce timber in Canada suitable for

making pulp seems almost unlimited. I am informed by engineers, woodsmen, and timber experts who have explored the country from here north to Hudson Bay that spruce timber is interspersed all through the pine in the pine belt, similar to that in Michigan and Wisconsin. The pine belt proper extends about 100 to 150 miles north from the Sault River, and the spruce belt proper begins at the northern extremity of the pine belt and extends beyond the southern extremity of Georgian Bay, and the timber is much thicker and larger than in the pine belt.

The Canadian collector of customs here gives the following as the principal imports through his office for the six months ended June 30, 1898: Coal, \$21,430; iron and the manufactures of iron, \$11,138; salted

meats, \$5,261; kerosene, \$614.

There are no large towns or cities in this district, and the imports from the United States are not large, but the following articles, solely because of their superior qualities, can be sold here: Furniture of special design and finish, particularly in oak; the best grade of locks, lumbermen's tools, mechanics' tools, and files (those made in Pittsburg are particularly mentioned); salted and canned meats, cabbage, onions, nuts, and fruits of all kinds, green, dried, and canned, except apples and grapes; petroleum and all lubricating oils, lamps, nails, guns, galvanized sheet iron, barbed wire, tar felt, manila rope, waste, and a variety of other goods in iron and steel; novelties in sterling silver, and jewelry, clocks, movements for watches, gold and silver plated ware, and tobacco.

There are no houses exclusively for jobbing in this district, but because of the extensive lumbering and mining industries there is a large retail trade, and a good share of this trade, particularly in lumbermen's and miners' supplies and hardware, should be furnished by jobbing houses

in the United States.

The merchants of this district are, as a rule, responsible, and will not object to the time that merchants in the United States would be willing to give them.

Trade conditions existing in this (Algoma) district should, it seems to me, apply equally to the districts of Nipissing, Parry Sound, and

Thunder Bay.

GEO. W. SHOTTS, Commercial Agent.

SAULT STE MARIE, October 6, 1898.

# AGRICULTURAL PRODUCTION OF ONTARIO.

The annual report of the bureau of industries for the Province of Ontario for the year 1897 gives the following figures, showing the products of the Province for the year:

Fall wheat Spring wheat Barley	950, 222	Bushels.	Bushels.
	323, 305	23, 988, 051	25. 2
	451, 515	3, 519, 322	15. 1
Oata	2, 432, 491 187, 785 896, 785 151, 669 50, 591 169, 233	12, 021, 779 86, 318, 128 8, 882, 005 12, 867, 093 8, 464, 196 981, 340 16, 100, 797 18, 103, 387 4, 433, 628 68, 297, 48 68, 287, 185	15. 1 26. 6 85. 5 18 15. 5 22. 8 19. 4 95 440 869 457 41. 63

The report shows that the average crop per acre of 1897 was slightly larger than the average crop for the past sixteen years, with the exception of pease and patatoes, which were smaller.

It also shows that the wool clip of the year was 437,000 pounds short of the average for the last sixteen years, and that there was 137,362,916 pounds of cheese manufactured as against 65,638,656 pounds in 1887.

GEO. W. SHOTTS, Commercial Agent.

SAULT STE. MARIE, January 28, 1899.

# ST. THOMAS.

This district, with a population of about 180,000, is practically an agricultural one. Very little manufacturing of any character is carried on.

The exports from this district to the United States comprise animals, bran, flax, hides, household goods and settlers' effects, and staves; to Great Britain, animals and animal products, flour and wheat.

The exports to the United States, as per records of this consulate, in detail herewith appended, are for the calendar year 1897.

 Year ending December 31, 1897
 \$258, 187. 84

 For the first six months of 1898, ending June 30
 75, 497. 24

From Courtright Agency:

 Year ending December 31, 1897
 \$32, 372. 22

 For the first six months of 1898, ending June 30
 6, 182. 70

The value of exports to Great Britain and other countries for the same period, according to unclassified information furnished by the collector of inland revenue for this district, was:

Period.	Great Brit- ain.	Other coun- tries.
Year ending Dec. 31, 1897	\$130, 980	\$1, 278
Six months ending June 30, 1898	322, 924	14, 779

Flour was the principal article in the large increase during the first six months of 1898, its export for the June quarter alone amounting to \$231,199.

The value of imports, unclassified, from all countries into this district for the year 1897 and the first six months of 1898, as furnished by the collector of inland revenue for this district, was:

Period.	United States.		Great	Other
Period,	Dutiable.	Free.	Britain.	countries.
Year ending Dec. 31, 1897	\$260, 935 158, 292	\$153, 261 89, 279	\$39, 626 17, 414	\$8, 159 4, 445

The principal imports from the United States are anthracite and bituminous coal, corn, carpets, mattings, wall paper, moldings, cotton goods, hats and caps, boots and shoes, etc.

<sup>&</sup>lt;sup>1</sup> In reply to circular of August 5, 1898.

Were it not for the duty, American boots and shoes, ready-made clothing and other articles of wearing apparel would unquestionably hold this market to the exclusion of domestic manufactures, because of neatness of style and superior finish. This applies also to table cutlery and fine hardware. As it is, only a very small proportion of the population, I am informed by the dealers, will pay the difference in prices. In the matter of bicycles, the United States makes seem to be more than holding their own, and I attribute their popularity to their durability and superior finish, as well as to the energy with which the trade is solicited.

With reference to increasing the demand for American goods, I am of the opinion that it would require closer figuring and more energetic soliciting on the part of our manufacturers and wholesalers, and the establishment of strong representative agencies in the larger cities, by which the merits of our goods would be more fairly and systematically presented. Under existing conditions, I am informed that dealers handle American goods only in a gingerly, half-hearted manner, because there is not the same profit as there is in pushing an inferior article of domestic manufacture. The remark is frequently heard, "Yes; we have the American make, but we regard this made at Montreal (or at Toronto or some other Canadian manufacturing center) as being much superior; in fact, we prefer it in our own family use." Under these circumstances, unchampioned American goods have not a fair chance in competition with a less meritorious article of domestic manufacture.

Commercial credits and rates of exchange are practically the same

as in the United States.

While St. Thomas has perhaps an advantage over any other place in the Dominion in the way of railroad facilities, there are no natural resources to induce manufacturing establishments to locate here. There is neither water power nor raw material immediately available, and, with the exception of four flour mills, the St. Thomas Car Wheel Works, and the J. H. Hite Handle Factory, no manufacturing is done here.

M. J. BURKE, Consul.

St. Thomas, November 16, 1898.

Declared value of exports from St. Thomas, Ontario district, to the United States during the four quarters of the year ended December 31, 1897.

	Quarter ending—

# MANITOBA.

### WINNIPEG.

This district embraces a vast extent of territory and a great diversity of industries and commercial interests. Some of the country included within it is valuable only for grazing purposes, or for its timber and minerals, but the larger part consists of arable plains of wonderful fertility, capable of supporting a large agricultural population and of producing an enormous surplus of food products for export. The agricultural lands of the district now within reach of transportation lines, and available for settlement, are in extent more than twice the size of North and South Dakota combined.

In climatic conditions this district does not differ materially from the Dakotas, having perhaps a better natural water supply and a less excessive fall of snow.

### IMMIGRATION.

Much of the country is but sparsely settled, and the greater part of the agricultural land is unoccupied and uncultivated, while the mineral resources of the region, known to be of great extent and variety, are just beginning to be appreciated.

Immigration into this section has attained considerable proportions, and is growing in volume rapidly from year to year, owing to the liberal policy employed by both the Dominion and Provincial governments. There is a well organized and equipped immigration bureau. Paid agents are kept in many of the States of the Union and in many of the European countries to advertise the advantages of this region and personally solicit immigrants. A free homestead of 160 acres is given to everyone who will occupy and cultivate it. Immigrant houses, or hotels, are established at the principal railroad points, where newcomers are housed and fed until they can be permanently located.

Concessions in transportation rates are made, and in many ways immigration is encouraged. As a result of these efforts, aided perhaps by the endeavors of the United States Government to restrict immigration into the States, about 35,000 agriculturists, to say nothing of those of other occupations, have located within this consular district during the present season. Indications point to a much larger influx during the next year.

These accessions to the population come largely from the countries of northern Europe, and many of them would be rightly classed as

undesirable in the United States. They are, however, much less so here. Being located in small communities and rural districts, remote from large cities and centers of population and wealth, they are constrained by circumstances to devote their time and energy to honest toil in the effort to make a living.

# AGRICULTURE.

All cereal crops are produced here, but the principal one is wheat. The wheat crop of the present year in the district is estimated at 30,000,000 bushels, and is of excellent quality. Much the greater part of it will be exported as grain, the milling facilities of the district being entirely inadequate to its manufacture into flour. Other cereal and vegetable crops are abundant for home consumption, and in the case of rye, oats, flax, and barley there will be a large surplus to go abroad.

The commerce of this district in animals and animal products is also

important, and grows in volume from year to year.

Their export, as is also the case with cereals, is principally to Europe, owing to the customs duties laid upon this class of imports into the United States. There is, however, a considerable movement of young stock cattle into the United States, the excellence of the cattle produced in the district causing them to be much sought after by farmers and ranchmen of the Northwestern States.

The invoices of such cattle exported from this district to the United States during the fiscal year ending June 30, 1898, aggregated \$404,086.12, and the trada is steadily increasing. A very large proportion of the

shipments is classed as calves and yearlings.

#### FISHERIES.

The fisheries on the numerous fresh-water lakes in the district constitute an important industry. The principal plants are located on Lake Winnipeg and the Lake of the Woods, but all the lakes and rivers in the district are well stocked with merchantable fish. During the summer of 1897 the fish taken at the principal fisheries at Lake Winnipeg aggregated 3,000,000 pounds, and during the last winter "ice

fishing" resulted in a catch of about 1,000,000 pounds more.

During the summer of 1898 the catch at Lake Winnipeg was limited, by agreement among the principal firms operating there, to 3,000,000 pounds, although three times that amount could have been taken during the season with the apparatus used. The laws of Canada guarding against the depletion of the stocks of fish in Canadian lakes are strict, and, as a rule, rigidly enforced. The supply of fish in Lake Winnipeg shows no sign of diminution, but at the Lake of the Woods, which lies on both sides of the international boundary, and where, consequently, the Canadian laws can not be strictly enforced, the stock of fish seems to be greatly depleted. International regulations for the preservation of fish in the Lake of the Woods and in other waters crossed by the boundary ought to be inaugurated and enforced without delay.

The price of fish at Lake Winnipeg last year ranged at about 4 cents per pound, but this year, since the catch was made, all the plants on the lake have been bought up and consolidated under one firm, or trust, and the entire catch of fish was sold, with the business, at 2½ cents per pound. The product of the summer fishing is frozen as it is caught and kept in cold storage until winter, when it is marketed, almost the

entire catch being exported to the United States.

#### MINERALS.

There are extensive bituminous coal deposits in the southwest part of the district, but by reason of the distance to good markets and inadequate transportation facilities, the field is not largely developed. One mine, belonging to the Alberta Railway and Coal Company, at Lethbridge, Alberta, has been running steadily. The output of this mine for the fiscal year ending June 30, 1898, was 122,000 tons, of the average value at the mine of \$2 per ton.

A considerable part of the output was exported to points in the State of Montana. The Crow's Nest Pass Bailroad, recently built, has opened up a large district west of Lethbridge and near the international boundary, rich in anthracite and bituminous coal and other minerals,

that will attract attention in the near future.

Iron, copper, and the precious metals are found extensively in the western, northern, and eastern parts of the district. The principal developments so far made in mining for gold and silver are in the eastern part of the district in the vicinity of the Lake of the Woods, Rainy Lake and River, and Seine River, in the western part of the province of Ontario. That country being comparatively level, with an abundant supply of timber and water and a moderate climate, and being easily accessible to established lines of rail and water transportation, is peculiarly favorable to mining enterprises. The discoveries of gold and silver in that locality are comparatively recent, but investments made there are, in many cases, showing satisfactory returns, and developments so far indicate a great amount of high-grade ore and promise prosperity for the district. The customs returns already show a considerable export of gold and silver bullion and ores to the United States.

# TRANSPORTATION.

The transportation facilities of the district have been much improved of late years, and are now quite satisfactory. There are five lines of railroad connecting the district with the United States, and another is now being built, running southeast from Winnipeg into the State of Minnesota, passing around the south end of the Lake of the Woods, in the direction of Duluth, which city is its objective point.

The city of Winnipeg is a railroad center, there being no less than ten lines radiating from it in all directions. Among these are the Canadian Pacific and the Northern Pacific, each with a number of branch lines. About 250 miles of extensions of these lines have been completed this year, and still more is under contract to be built next

year.

# THE CITY OF WINNIPEG.

The city of Winnipeg has inaugurated an extensive system of street; sewer, and other improvements, which indicates a fair degree of pros-

perity.

About 6 miles of macadam street have been laid during the past summer, also some stretches of block and asphalt pavement. The experiment of having the public improvements made by day labor, instead of by contract, has been tried and found very satisfactory. It has proved economical, besides giving employment to many who would otherwise be idle and a charge on the public charities.

A plant for furnishing a general water supply is now being built by the city, to be owned and operated by the municipality, and will be

ready to begin operations about the beginning of the year 1900. electric lighting plant, under municipal ownership, is also in contem-

plation.

There is a slight advance in the rates of wages paid in this country since last year, but they are yet below the rates prevailing in the adjacent States of the Union. Skilled labor in the various trades is paid 15 to 20 cents per hour; railway employees get from \$1 to \$1.75 per day; clerks get from \$25 to \$50 per month, but the majority get less than \$35. Domestic servants are scarce, and command from \$10 to \$16

per month.

There are no local restrictions on United States salesmen or their business, and there is no general prejudice among the people or the dealers against our goods or manufactures. All such goods stand strictly on their merits in these markets. The Canadian customs tariff as administered at the present time gives a differential rate in favor of Great Britain of 25 per cent. But for this tariff, which is heavy on many classes of goods and seemingly intended to be prohibitive, American goods would entirely control the markets of this district. As it is, and in spite of the tariff, the imports from the United States are large, greatly exceeding the imports from all other countries and constantly growing in importance. A modification of the Canadian customs duties would greatly increase the volume of imports from the United States and would undoubtedly be highly beneficial to the people of this district, however it might affect the interests of the manufacturers and importers of eastern Canada. The foreign commerce of the district for the fiscal year ending June 30, 1898, shows a handsome increase over that of the preceding year.

I am unable to obtain the figures showing the commerce of the district as a whole for the two years mentioned, but give below those for the Province of Manitoba, as illustrative of the commerce of the entire

district.

# COMMERCE.

The total foreign commerce of the Province of Manitoba for the fiscal year ending June 30, 1897, aggregated \$4,823,000, of which \$2,858,000 represented imports and \$1,965,000 exports. For the fiscal year ending June 30, 1898, the total commerce amounted to \$7,904,985, of which \$4,432,184 was in imports and \$3,472,801 in exports. These figures show a much larger proportionate increase of exports than of imports, principally due to the large export of agricultural products to Europe during the last year. The foreign trade per capita of the population of the district for the year ending June 30, 1898, was \$40, as against \$24 per capita for the preceding year.

The total value of imports into the Province of Manitoba for the fiscal year ending June 30, 1898, was \$4,432,184, of which amount \$1,305,440 was on the free list and \$3,126,744 worth was dutiable, duty being col-

lected to the sum of \$907,050.24.

Of the entire amount of imports into the Province, \$3,297,226 came from the United States, as against \$777,968 from Great Britain and

\$1,134,958 from all other countries, Great Britain included.

The total exports from the Province of Manitoba for the same fiscal year aggregated \$3,472,801, of which the sum of \$2,091,395 was classed as products of agriculture, \$1,076,240 as animals and animal products, \$210,210 as product of fisheries, and \$66,743 as manufactures.

Of the manufactures exported, the sum of \$27,524 was scheduled as not of Canadian manufacture, and consisted principally of goods of United States manufacture returned to that country.

Digitized by GOOGLE

I am satisfied that the sale of many kinds of American goods can be largely increased in this district, if the proper effort is made. Our manufacturers and dealers make a serious mistake by neglecting to establish local agencies in the principal cities in this country, where their goods can be exhibited and sold, and by not putting more traveling salesmen in the field to advertise their goods and take orders. They rely too much upon sending circulars and advertising matter of various kinds through the mails. Very few goods are sold here upon such solicitation. Canadian merchants, as a rule, will not buy goods until they have seen them or samples of them, and have been personally solicited to buy.

W. H. H. GRAHAM, Consul.

WINNIPEG, November 9, 1898.

į

# NEW BRUNSWICK.

# CAMPBELLTON.

Since transmitting a similar report to the Department for the year ended June 30, 1897, this consular district has been reduced in size about one-half, which has necessitated, in making comparative statements of exports, etc., a tabulation of the two years, embracing the area within the present district—the extreme northern portion of the Province. A comparison should therefore not be made with figures in previous reports on trade and commerce.

EXPORTS.

Comparative statement of the exports to all countries from the consular district of Campbellton, New Brunswick, for the years ended June 30, 1897 and 1898.

Countries to which		Value.		
exported.	Articles.	1897.	1898.	
United States	Animals, sheep.		\$11.50

Tealer	Lumber Salt cod		2, 508. 00 56, 210. 00
Italy	Lumber		50, 210. 00
Other countries	Salt cod		190.00
Total		23, 471, 47	159, 490, 80

It will be seen by the preceding statements that there is a decrease

of exports from this district amounting to \$135,919.

The articles which show a decided decrease are cedar shingles, canned lobsters, and fresh and salt fish. The only article showing an increase of any importance is potatoes. The decrease of cedar shingles is due to low quotations and less demand for them in the United States. together with the duty of 30 cents per thousand. The decrease in exportation of fish is principally due to poor catches. The increase in shipment of potatoes was due to a larger crop and somewhat better prices in the United States.

The condition of the long lumber market remains about the same as in the preceding year, i. e., poor. In anticipation of the market remaining dull, one-third less logs were cut on the Restigouche River and its tributaries last winter. There were 21,000,000 spruce and 10,500,000 cedar logs cut. Reliable information has been received that the cut

will be still less this winter.

# IMPORTS.

Satisfactory figures and information could not be obtained to formulate a statement of the imports, giving kind and value; but the imports direct would not indicate the consumption of goods from foreign countries, as they are obtained through importers and houses in the larger cities of Canada, by which plan they can be purchased at a lower figure than by importing direct in small quantities for individual use.

Digitized by GOOGIC

The principal articles imported are pork and beef, canned meats, nets and twine, mill machinery, agricultural implements, hardware and lubricating oils from the United States; woolen, linen, and cotton goods, whiskies and champagne from Great Britain; molasses, sugar, and rum from the West Indies, and millinery and fancy goods, brandy and champagne, from France.

As has been previously stated by consular officers in Canada, the chief obstacle to the introduction of United States goods is the high

tariff.

# INDUSTRIES.

The industries of this district are those of the forest and fisheries. The products of the forest consist mostly of spruce planks, boards, deals, and laths, cedar shingles, and railway ties. The spruce boards, etc., are exported principally to Great Britain, and the cedar shingles and railway ties to the United States.

Three sawmills were burned during the early part of the season, viz: D. Richards's mill, containing three shingle and two clapboard machines and one planer; employed 35 men. Loss on buildings and machinery, \$16,000; on stock, \$3,000; insurance, \$9,000.

F. Stancliffe & Co.'s mill, containing three shingle machines; employed 15 hands. Loss on building and machinery, \$8,000; insurance, \$2,000.

William Doberty's mill, containing one rotary and one gang saw, one lath machine, one double edger, and one trimmer, valued at \$15,000; no insurance. There were 55 men employed.

All of these mills are in the course of reconstruction, with more or less improvements in regard to safety from fire, and improved machinery.

# RESTIGOUCHE AND WESTERN RAILWAY.

The projected Restigouche and Western Railway, mentioned in last year's report, has become a reality. The road is being built by a joint-stock company, Messrs. Malcolm & Ross having the contract. The Dominion government has given a grant of \$3,200 per mile, and the local or provincial government \$2,300 per mile, making the total grant \$660,000, as the road is to be 120 miles long. The railway will run across the northern portion of New Brunswick from Campbellton to St. Leonards, 12 miles above Grand Falls, on the St. John River.

It is expected that the Bangor and Aroostook Railway will extend its line to connect with this road; and if so, it will give direct and rapid transit to New York City from here, cutting off about 180 miles.

The contractors expect to complete 10 miles of the road before the heavy snowstorms. Preparations for making a start were not completed until late in the summer, which accounts for the few miles of road that will be finished this year. An embankment of most excellent gravel, several acres in extent, which is within 4 miles of this end of the road, will greatly facilitate the building operations and save many hundreds of dollars to the company.

JAS. S. BENEDICT, Commercial Agent.

CAMPBELLTON, October 31, 1898.

<sup>&</sup>lt;sup>1</sup> Commercial Relations, 1896-97, Vol. I.

### MONCTON.1

Notwithstanding the efforts to foster trade with Great Britain, Canada imports a large percentage from the United States. Among the imports are bicycles, boots and shoes, cotton, coal oil, indian corn, and rubber goods. Following is a brief statement of imports from Great Britain and the United States into the several ports of my consular district, for the six months ending June 30, 1898:

Port.	Great Britain.	United States.
Chatham	\$45, 497 30, 613 3, 901 29, 256	\$26, 680 112, 754 8, 274 46, 482

Our tariff is apparently a great barrier to exporting either raw or manufactured materials to the United States. The principal exports are fish, canned fruit, berries, plaster rock, lumber, and ship knees. Pulp wood is now becoming an important item of exportation. In fact, its manufacture is rapidly becoming one of the most important industries. It is very largely shipped to the United States. Considerable American capital is invested in this industry. Following is a synopsis of the exports to Great Britain and the United States from the several ports of my consular district, for the six months ending June 30, 1898:

Port.	Great Britain.	United States.
Chatham Moneton Sackville Amberst	28, 286	\$188, 176 58, 199 1, 892 11, 187
ZIII 10 Z 10 Z 10 Z 10 Z 10 Z 10 Z 10 Z	00, 110	11, 10,

One of the most important industries is the lumber trade. During the winter months, large gangs of men and horses are sent into the woods to cut and haul the logs to the rivers and streams. In the early spring, these logs are driven down the rivers and streams to sawmills, where they are manufactured into deals, boards, and scantlings. The greater portion of this lumber is sent to the British market. The lumber operations, carried on as they are winter after winter, are gradually depleting the best timber lands, so that the importance of this industry is slowly declining. Lumbering is carried on for about eight months in the year, and the men are paid from \$1 to \$1.25 a day.

Another important feature is the rock plaster mining of Hillsboro. Last year, 112 vessels, almost all American, carried 119,478 tons of rock plaster, calcined plaster, and terra alba to the United States. The company, in 1897, employed 225 men, and will turn out the same quantity of material this year, but it now employs only about 190 men, at an average of \$1 a day for laborers and from \$1.50 to \$1.75 per day for coopers and carpenters. The fact that a smaller number of hands is employed is not due to decreased business, but to the better condition of the quarry.

The sandstone quarries at Sackville form an industry of some importance. Building stone and grindstones are turned out. The annual product is: Building stone, 2,000 tons, value \$12,000; grindstones, 1,000 tons, value \$8,000.

Sixty men are employed from May to November, about 150 days, at \$1.50 a day.

Another large industry in my consular district is the manufacturing of engines, boilers, and general machinery. The principal concern is The Robb Engineering Company, Limited, of Amherst, Nova Scotia. This company has an annual output to the amount of \$160,000. One hundred and twenty hands are employed, at an average of about \$9 per week.

The manufacturing of stoves is largely carried on by the Sackville Foundry Company, Enterprise Foundry, and Record Foundry Machine Company. These employ each about 100 men, at an average of from

\$1.35 to \$1.50 per day.

Bhodes, Curry & Co., of Amherst, Nova Scotia, manufacture railway cars, car wheels, castings, and building materials. Their annual output is about \$300,000. They employ 175 men, at an average of from \$1.10

to \$1.60 per day.

There are also several large shoe manufacturing companies within my district, the principal being the Amherst Boot and Shoe Company. Last year's output was \$470,575, an increase of \$27,000 over the previous year. Its annual sales include about \$75,000 of rubber goods and \$200,000 worth of patent leather goods. This is a steam power factory, and a large quantity of United States machinery is used, but one-third of its product, especially of a heavy class, is hand work.

The boot and shoe factory at Shediac employs about 70 men. Its output for the last six months was worth about \$50,000. The output per week is 1,666 pairs, everything being sold in Canada. The average wage is \$4.50 per week. All the machinery is from the United States, and

gives perfect satisfaction.

There is also a small boot and shoe factory at Sackville, employing about 25 hands, with a quarterly output of 12,896 pairs. The average weekly wage is, males \$10, females \$3. Twenty-five per cent of their work is machine work, all their machinery being of United States make.

The Moncton Sugar Refinery was destroyed by fire about two years ago and has not been rebnilt; but the barrel factory in connection therewith is still in operation. Staves and headings are manufactured for the two refineries belonging to the same company, The Acadia Sugar Refining Company, at Halifax, Nova Scotia. It uses annually 2,500 cords of hard wood, costing about \$4.50 a cord, and 1,500 cords of spruce, costing about \$2.50 a cord. Fifty men and boys are employed, at an average of \$1.20 a day. The yearly output is 5,000,000 staves and 250,000 pairs of heads—value about \$40,000.

The Moncton Woolen Mills is an important manufacturing industry, employing about 80 hands, and paying men from \$1 to \$2 a day, and women from 50 to 75 cents per day. For the six months ending June

30 last, the output was to the value of \$75,000.

The Dominion Cotton Mills Company's mill at Moncton reports that the total output for the last twelve months was 1,305,000 pounds, valued at \$196,000. Two hundred and sixty-five hands are employed, at an average of \$4.07 per week. The coarser classes of cotton textiles are 27 inches to 36 inches in width; 42 by 52, and 3 to 5 yards per pound.

The recent invention, known as the "Cleveland cylinder," has been thoroughly tested by the Intercolonial Railway of Canada, with head-quarters at Moncton. An express engine has been fitted with this cylinder, and it is said that the test has been eminently satisfactory. For further details regarding this invention, see appended clipping from the Montreal Star.

I might also mention the so-called Salt Water Gold Mining Company at Hillsboro, New Brunswick. It is an American company, incorporated in the State of Maine. They have been experimenting for the last five or six months extracting gold from sea water. I have been unable as yet to ascertain the results.

GUSTAVE BEUTELSPACHER, Commercial Agent.

Moncton, October 13, 1898.

THE CLEVELAND CYLINDER—SAID TO BE ABLE TO DEVELOP SPEED OF 100 MILES AN HOUR.

Mr. A. M. Peterson, late of Brandon, Manitoba, but now of Colborne, Ontario, is at the Windsor, where he arrived from Ottawa yesterday, after concluding arrangements with the Hon. A. G. Blair, minister of railways and canals, for use in the connection with the Government railway of the Cleveland cylinders for engines, of which great things are predicted. The locomotives on this road will be fitted out

with the new device as rapidly as circumstances will permit.

Speaking to a representative of the Star this morning, Mr. Peterson stated that the main features of the device were a double piston, large central exhaust, and the application of the suction of inductive principle to the nozzle. Each cylinder had two piston heads on one rod, and consequently, the cylinder was longer than that ordinarily in use on locomotives. Near the center of the cylinder a groove was cut in its wall, of sufficient area to afford an ample exhaust under any conditions. As the piston passed over this point, the exhaust assumed the characteristic of an explosion rather than anything else, opening as it did into the chamber between the two pistons, which was in constant communication with the smokestacks. As the piston passed back on the return of the stroke and covered the main exhaust port, the valve or supplementary exhaust passed out through the nozzle in such a way that the main exhaust operated to create a vacuum in the cylinder. The valve and the valve motion of the ordinary engine could be used in the device.

In answer to a question, Mr. Peterson remarked that the device was a Canadian invention, the inventors being Messrs. E. W. and W. F. Cleveland, both Canadian citizens. Up to the present, Canadian money had developed it, and Canadian manufacturers and the management of the Intercolonial Railway had assisted greatly in

bringing it up to its present stage.

The advantages claimed for the device over the ordinary cylinder were: The back pressure is overcome, and there is no condensation. If water could accumulate in the cylinder, each stroke of the piston would sweep it into the exhaust. The compressor is controllable so that a beautiful indicator card can be produced.

The compressor is controllable so that a beautiful indicator card can be produced.

The speed, said Mr. Peterson, would be limited only by the condition of the road and of the reciprocating parts and the brakes. There was no reason why many of the roads now in operation could not run their trains on the straighter portions of their lines at the rate of 100 miles an hour. The device further enabled the engineer to get his train under speed promptly. The strength developed would be proportioned to the speed and would greatly increase the tractive power of the locomotive. The resulting smoothness of operation following the application of the device to an engine on the Intercolonial road has been favorably commented on by the drivers who had used the engine, and who explained it by the absence of opposition in the cylinder. As a consequence, there was far less strain on the reciprocating parts, and the wear and tear on the roadbed, as well as the cost of repairs, would be greatly reduced. A saving in fuel of from 25 to 40 per cent would be effected, and a like saving would be made in water evaporation.

Mr. Peterson added that the device might be applied to anything intended to develop steam power, such as portable, traction, electric, stationary, and marine

engines and locomotives.

Engine No. 59, hauling No. 1 and 2 express between St. John and Moncton, is equipped with a Cleveland cylinder.

#### ST. JOHN.

I submit the following annual report of imports and exports for this consular district:

Imports from the United States	\$1, 285, 260 3, 534, 158
Total	4, 819, 418
Exports to the United States	3, 134, 231 6, 382, 615
Total	9, 516, 846

The above is for the year ending June 30, 1897, the latest official returns published.

Value of exports through this office for year ending June 30, 1898.

Lumber Sundries	\$1,094,610 382,186
•	
Total	1 470 700

About 90 per cent of the lumber sent through this office is manufactured by United States citizens from timber from the State of Maine, which is admitted free of duty.

# DOCKS.

There have been erected in the city of St. John during the last year, one wharf 320 feet long, fronting on the harbor, and one 300 feet, fronting on the slip; also, four large warehouses, each 320 by 70 feet erected chiefly as terminal facilities for the Canadian Pacific Railway, the whole costing in the vicinity of \$750,000. This harbor is of sufficient depth and capacity to accommodate the largest steamships, and is free of ice during the severest winters. The present elevator has a capacity of 350,000 bushels, and the Canadian Pacific Railway is now erecting another one, adjoining, of 750,000 bushels capacity.

IRA B. MYERS. Consul.

ST. JOHN, July 13, 1898.

# ST. STEPHEN.

In accordance with instructions contained in circular dated August 5, 1898, I submit such information as can be gathered from this consular district.

The importations of this port for the fiscal year ending June 30, 1898, were \$499,415, and the exports for the same period were \$299,055. The imports for the six months ending June 30, 1898, were \$233,651. The exports for the same time were \$154,948.

The lumber industry is an important one in this district, and the principal market has been the United States. The dullness of building operations in the United States, caused by the recent war with Spain, has had a depressing effect on the lumber trade here, and many of the manufacturers have turned their attention to the markets of England. The duty on Canadian lumber has also, to some extent, hindered trade. The export of wool from this port has entirely ceased since the month of May last, due undoubtedly to the low price of wool in the United States market.

The new railroad through eastern Maine, known as the Washington County Railroad, connects Calais, Eastport, and many other shore towns with the Maine Central Railroad at Ellsworth, Me., and the Canadian Pacific Railway here opens up new transportation facilities to shippers along the coast of Maine. Large quantities of sardines, smoked and pickled fish, etc., destined for Chicago and the West, are being shipped over this new route by the Canadian Pacific Railway. Much lower freight rates have been obtained, and no doubt, this will cause a great business boom in those towns which, until now, have been entirely without railroad transportation.

Herewith, I give the imports to this port for August and September, from the United States and Great Britain, comparing the first two months of "preferential duty" with the corresponding months in 1897:

United States: August, 1897September, 1897	\$20, 242 24, 634
Total	
August, 1898	17, 304 34, 759
Total	52, 063
Great Britain: August, 1897September, 1897	2, 069 1, 260
Total	3, 329
August, 1898September, 1898	3, 320 1, 884
Total	5, 204

This district being on the border, the tastes and wants of the people on both sides of the line are very similar, and nothing requiring special notice has arisen within the past year.

CHARLES A. MCCULLOUGH, Consul.

St. Stephen, October 17, 1898.

# WOODSTOCK.

While the prevailing Canadian tariff is in force, it is impossible to record any startling growth of United States trade in this district. Still, one can not but be impressed with the idea that, with a fair amount of push, business can be increased.

The entries at this port of merchandise from the United States for the year ending June 30, 1898, were: Dutiable goods, \$45,316; free goods, \$30,666. Exports for the same period were \$82,888.

These are the official figures from the custom house in this district.

I am unable to give figures of imports from other countries.

Transportation is furnished by the Canadian Pacific Railroad, connecting at Vanceboro with the Maine Central Railroad, and at St. Stephen, 90 miles south of here, with various lines of steamers. This place is about fifteen hours from Boston.

In the matter of freight charges, the average rate of dry goods from London, England, 27s. 6d. (\$6.69) per marine ton, is the lowest that I have found. This I am told is about equivalent to 5 per cent on heavy and 10 per cent on light goods. Rates on similar goods from Montreal are 66 cents per hundredweight, against 60 cents per hundredweight from Boston, which shows a small per cent in favor of United States markets.

Nearly all the lumber shipments into the United States have been made here from logs grown in the State of Maine (see sec. 2508, Revised Statutes of the United States), our tariff practically shutting out the

production of this country.

There is a decided preference among consumers for American goods of various kinds, notably boots, shoes, domestics, furniture, hardware, tools, and agricultural implements, one firm buying a plow, made in New York State, in car lots. Credits are not materially different from those in New England.

A canning factory is in active operation, having been recently started. Wages are about the same as in neighboring States, with possibly

the exception of domestic help, which is slightly lower.

A local tax or license of \$9 a year or \$3 a trip, which is good for three months, is collected here of all commercial travelers, no passports

being used.

Banking facilities are good, there being branches of the Bank of Nova Scotia, the Merchants' Bank of Halifax, and the People's Bank of Halifax located here. Exchange on Boston or New York is one-eighth of one per cent. Credits vary from thirty to one hundred and twenty days, although there is a growing tendency to shorten time.

FRANK C. DENISON, Consul.

WOODSTOCK, September 13, 1898.

# NEWFOUNDLAND.

# ST. JOHNS.

This consular district comprises the colony of Newfoundland, having a seacoast of nearly 2,000 miles; and Labrador with its 1,100 miles of coast, fronting the Atlantic, is included in the jurisdiction of Newfoundland, and is the summer resort of 20,000 of its fishermen. Nature has marked the island as one of the world's great fishing centers. A distance of a degree from the shore is the "Grand Bank of Newfoundland," which extends for a length of 600 miles, with a breadth of 200. This is the great capital of the cod, and is alive with colonies of this fish. Vast shoals of the bait fishes, caplin, squid, herring, follow each other in succession throughout the season, furnishing food for the cod and drawing them shoreward. The interior, though of great extent and covered with forests relieved by numerous lakes of various sizes, is comparatively little known. The inhabitants, estimated at 210,000, all live in the bays and inlets around the shore. St. Johns, the capital and principal town, has a population estimated at 30,000, and is the center of commerce.

The fisheries constitute the staple industry of the country. On the expert of their products, the colony depends. The last census returns (1891) show that out of a population of 202,000, there are 54,775 engaged in catching and curing fish; while 825 are engaged in lumbering, 1,258 in mining, 1,058 in factories and workshops, and 8,686 in other employments. The products of the fisheries constitute about four-fifths of

the entire exports.

# COD FISHERY.

The cod fisheries greatly exceed those of any other country in the world. The annual average export of cod is about 1,350,000 quintals of 112 pounds each, in weight. The Dominion of Canada exports an average of 450,000 quintals, and Norway about 751,000 quintals. The aggregate annual catch of cod in North Atlantic waters, by American, French, Canadian, and Newfoundland fishermen, is estimated at 3,700,000. This enormous catch has been going on for centuries. The fishermen who catch the fish also cure it, with the assistance of women and children. The process is thus conducted on many hundreds of different flakes, and those who buy and export it have not the least control of the cure. There is, consequently, a want of uniformity in the cure, and no means of curing differently for different markets. In many cases, lack of means and of proper knowledge operates against proper treatment. The result is that large quantities of badly made fish are thrown on the market. The suppliers, who have made advances to the fishermen, have to take the fish, whatever the cure may be, at a fixed valuation; and generally, a fisherman gets as much for imperfectly cured fish as for the prime article, so that there is small inducement to secure a careful and honest cure. Cargoes have to be made up from fish received from hundreds of different hands, and no selection can secure uniformity.

While there is difficulty very often in finding a market for manufactured goods, the demand for cod never fails, and under the new and improved methods of cure and packing, as in the article known as "boneless codfish," its use is rapidly extending, while every portion of the fish is now used for some practical purpose. The improved method of manufacturing cod-liver oil has greatly enhanced its value from a medicinal point of view. The finest glue is made from the skin of the cod, and from the bones and head, a valuable fertilizer. Bailways in cod-consuming countries, such as Brazil, Spain, and the Mediterranean countries, have cheapened its transport into the interior, thus increasing its consumption. To the inhabitants of warm countries, the dried cod furnishes a palatable article of food, and many of them regard it as indispensable.

# THE SEAL FISHERY.

Next to the cod fishery, the most valuable of the Newfoundland fisheries is that of the seal. While the cod fishery has been prosecuted for almost four hundred years, the seal fishery is not more than ninety years old. It would appear that the attention of the people was so absorbed in capturing and curing cod, that they neglected the treasures which the vast ice fields brought within their reach, and the seal herds were left to bring forth their young amid the icy solitudes, undisturbed by the murderous gun, club, and knife of the hunter.

# THE LOBSTER FISHERY.

The last ten years were marked by the development of a new industry, in the packing and exportation of lobsters. From a small beginning in 1873, it gradually increased till, in 1888, the export was 3,360,672 pounds, valued at \$385,077. Not only has the catch increased this year, but the price is higher, the average being from \$9 to \$9.50 per case. The total number of cases (containing 1-pound tins, 48 to the case) exported this year will range from 60,000 to 65,000. The export of last year was 54,000 cases, but the price was not so high.

# SALMON FISHERY.

The export of preserved salmon from Newfoundland does not constitute a large or important item, seldom reaching in value \$100,000 per annum. The salmon are either pickled or put in hermetically sealed tins. They are taken for the most part in nets in the coves, bays, and at the mouths of the rivers. The season for taking them is brief, not exceeding six or seven weeks, commencing generally in the end of May. The fish is often so plentiful in St. John's during this brief season, that it sells for five or six cents per pound.

#### THE HERRING FISHERY.

The herring fishery of Newfoundland has been sadly neglected. Had it been prosecuted with skill and energy; had care been bestowed on the cure and packing, and had it been placed years ago under proper regulations, it might to-day have approached the cod fishery in value. The chief seats of the herring fishery are Fortune, Placentia, St. George's, and Bay of Islands, while on the whole coast of Labrador, the finest herrings are taken. During the last few years, the Labrador herring fishery has been unremunerative.

# MINERAL RESOURCES.

As a mineral-producing country, Newfoundland has only sprung into notice within the past quarter of a century. Previous to that date, in fact from its earliest history, there appears to have been a vague impression that it contained rich mineral treasures.

Ores of iron are very common in many parts of the island, and comprise nearly all the usual varieties; magnetite, hermatite, specular iron ore, limonite, ilmenite, chromite, siderite, vivianite, clay ironstone, brown and yellow ocher, iron pyrites, pyrrhotine, mispickel, etc. Of these, magnetite, hermatite, clay ironstone, and pyrites are the most abundant ores. The former occurs in large masses in the vicinity of

some of the copper mines.

Magnetic iron sand is of very common occurrence, both in this island and along the Labrador coast. Hermatite occurs with the magnetite at different parts of the island. Chromite is found associated with the serpentine group of rock, wherever displayed in the island. The common yellow pyrites (mundic) occur all over the island, and are found more or less disseminated through every formation that goes to constitute its rock crust. It is very hard and compact, with a close, even texture, and contains, on an average, about 2 to 4 per cent of copper. Large quantities of this same ore have been mined with the copper; an immense deposit is being extensively mined at Pilleys Island, Notre Dame Bay. The lode is said to average 60 feet in width, and contains 52 per cent of sulphur. This mine is in a flourishing condition, shipping large quantities each year to market, principally to the United States, to be used in the manufacture of sulphuric acid, copperas, etc.

In 1895, iron ore was first mined on the island, and amounted to 750 tons. The returns of 1897 show the export to be 58,946 tons. I am

told that the export for 1898 will reach 100,000 tons.

In addition to the ores already named, Mr. J. P. Howley, geological surveyor of Newfoundland, enumerates molybdenite, antimonite, manganese, lead, asbestus, mica, silver, gold, as occurring in various places, and in promising quantities. Building and ornamental materials, such as granites, syenites, sandstones, limestones, marbles, serpentines, slates,

as well as a variety of mineral substances applicable to fine arts and

ornamental purposes are found.

Native granite is now being exclusively used for building purposes in St. Johns. There is an abundance in the island, and it comes in a variety of plain and mixed colors. The quality is said to be better than the Aberdeen (Scotch) granite. It is easily quarried, and can be shipped without cartage. Vessels can be loaded from the quarries.

Coal has been mined for the first time this season in the island; formerly, all the coal used, excepting anthracite, came from Cape Breton, Nova Scotia. The Newfoundland Railway Company is now mining all the coal it uses, and is getting out about 30 tons per day. It is expected after this season, that all the soft coal used in the colony will be mined in the island.

Three oil wells have been bored within the past month, and are averaging 25 barrels each per day. The depth of these wells is 136, 257, and 460 feet respectively. These are pump wells; the oil has a specific gravity of 323 per cent, which is about the same as the Pennsylvania oil.

There is one pulp mill, recently completed, now in operation, and the

establishment of others is being considered.

The new line of railway across the island, which was completed this summer, has done much toward bringing Newfoundland into prominence.

Labrador, of which there is little known mineralogically, is, in all probability, a cuperiferous region also; many rich specimens of copper ores have been brought from various parts of the coast.

# AGRICULTURAL RESOURCES.

The prevailing idea is that Newfoundland is a dismal, fog-enveloped country, whose savage climate and poor soil preclude all attempts at agriculture. This is far from being the case. It is true that there are wide tracts on the island irreclaimably barren; others unfit for arable purposes, though excellent for grazing; and others covered with marshes and what the people call "barrens." Lakes and ponds occupy one-third of the surface of the whole island. The agricultural lands all lie in belts, and mainly along the valleys through which the principal rivers run and on the seacoast. Until the last five years, the people gave their whole attention to the fisheries; now, many of them have begun the cultivation of the land, which is excellently adapted for root crops. Potatoes, turnips, cabbage, etc., which have been supplied by the Dominion of Canada, are now being furnished by the farmers in the colony. The western portion of the island, from an agricultural point of view, is by far the most important. Its climate, too, is by many degrees superior to that of the eastern or southern shores, being entirely out of the range of fogs.

# BANKING.

The banking business of the colony is conducted by three of the leading Canadian banks—Bank of Montreal, Bank of Nova Scotia, and Merchants' Bank of Halifax—which were established in Newfoundland shortly after the great financial crash of 1894, at which time both the Newfoundland banks collapsed.

The money in circulation is principally of the issue of the three Canadian banks represented here, except in amounts below \$5, which is in silver; and, though the Government also issues gold coin of the one denomination (\$2), very little of it seems to be in active circulation. The Government recently passed a measure imposing a fine of \$400 for the issue of any notes below \$5 by any of the banks, which shut out the issue of Canadian legal tender notes of \$1 and \$2 denominations and compelled the circulation of the silver. Prior to that, the banks had been using the Canadian legal tender quite freely, and silver was becoming a drug on the market.

It would be hard to estimate accurately the amount of money in circulation, and it varies greatly; as, for instance, in the spring, when the men return from the seal fishery and are paid off, and again in the fall, when the men come in from the cod fishery, the amount of money in circulation is quite large; between seasons, it becomes greatly reduced. At the time the Union Bank and Commercial Bank closed their doors in 1894, the Union Bank had about \$700,000 and the Commercial Bank

about \$600,000 of their notes out, and if that can be taken as a basis, I would estimate the average amount of notes in circulation at about

\$1,300,000.

The rates of exchange are one-fourth of 1 per cent premium on drafts on the United States and Canada, and one-fourth of 1 per cent discount on checks on points in the same countries. English exchange rates are governed by the New York rates, the banks here receiving cable advice from New York of every change.

The discount on United States bank notes is one-half of 1 per cent and on United States silver 4 per cent. American gold passes current

on its face, and British gold at \$4.863 to the £1.

There is considerable American and English gold in circulation, but it is growing less all the time, as the people are rapidly gaining confidence in the bank notes, and, as they are much more convenient, the demand for payments in gold is diminishing.

# PRICES, WAGES, ETC.

There is no marked change in the price of commodities in this consular district. The cost of living is about 40 per cent more than in the United States or Canada. This comes from the high duty imposed on everything imported into the colony, the tariff being designed for revenue purposes only, not for protection. All expenses for making and repairing roads, streets, bridges, breakwaters, public wharves, etc., are defrayed out of the general revenue. The provision for the poor, for education, for the maintenance of a police force, and for the whole civil service, is also chargeable to the general revenue. The Crown lands and the postal service are the only other sources of revenue, besides the customs duties.

Wages rule as follows: For laborers, 80 cents to \$1 per day, according to the work performed; for female servants, from \$1.50 to \$3 per month, besides maintenance and lodging. There are no male servants. Factory operatives, from 25 cents to \$1.50 per day. Clerks in stores, males, from \$300 to \$600 per year; females, from \$80 to \$300. Dressmakers, from \$50 to \$400. Milliners, from \$200 to \$400. Bookkeepers, from \$400 up to \$2,000 per annum, according to the extent and importance of the business placed under their charge. Railway employees as follows: Surveying engineers, \$75 per month; office clerks, from \$25 to \$75 per month; laborers, \$1 per day; firemen, \$1.20; brakemen, \$1.20; engineers, \$2; machinists, \$1.50 to \$2. All laborers, etc., have to work ten hours per day. Police and firemen receive, if single, \$23.25 to \$25.42; married, \$28.65 per month; captains and sergeants, \$35.

# TARIFF.

The customs tariff for 1898 averages about 5 per cent more than the tariff of 1897. A sworn statement on all import entries is now required, and the production of an invoice on all export entries. United States traders resident in the colony are on equal footing in trade with colonists, as to taxes. A small fee is exacted by the municipality of St. Johns as a license to trade in the city. No taxes are required to trade in the outposts of Newfoundland.

# HARBOR DUES.

With the exception of ships of war, coasters, and Newfoundland fishing vessels, all vessels entering the port of St. Johns pay harbor dues at the following rates:

Vessels under 60 tons	Free.
60 tons and not more than 100 tons	<b>\$2.0</b> 0
100 tons and not more than 200 tons	3.80
200 tons and not more than 300 tons	4.00
300 tons and not more than 400 tons	5.00
Over 400 tons	6.00

These are payable once every half year, between the 1st of January and the 30th of June, and between the 1st of July and 31st of December.

There is no improvement in harbor facilities. The Newfoundland Railway proposes making a deep-water terminus at the western end of the harbor.

There has been no extension of the telegraph or cable service, excepting the telegraph line erected along the Newfoundland Railway.

## COMMUNICATION.

The transportation facilities in Newfoundland are:

Internal.—By railroad to the northern and eastern coasts to Exploits, Brook, and Halls Bay; thence through the interior of the country to Bay of Islands, Georges Bay, and finally to terminus of line on the west coast (in the Gulf of St. Lawrence) to Port au Basque, connecting with steamship Bruce for North Sydney, Cape Breton (7 hours sea voyage). At North Sydney, connection is made with the Intercolonial Railway to St. Johns, New Brunswick; Canadian Pacific Railroad to Vanceboro, Me.; Maine Central Railroad to Bangor, Portland, and Boston. The time from St. Johns, Newfoundland, to Boston is 72 hours; trains connect with steamer at Port au Basque for St. Johns three times each week, and run daily between St. Johns and Placentia (86 miles) in Placentia Bay, connecting at Whitbourne for Harbor Grace.

Coastwise.—By steamer to eastern and northern coasts; also by steamer from St. Johns southern and western coasts and Gulf of St. Lawrence to Bouse Bay, both steamers returning to St. Johns semimonthly in summer. They do not ply after the Christmas season, on account of the heavy ice on the coast. A steamer runs between St. Johns and Battle Harbor, Labrador, stopping at all principal places and posts of the Hudson Bay Company and Moravian mission stations on the Labrador coast, making 7 round trips each season, usually commencing about August 1 and ending about October 20. There is no means of communication with Labrador after steamer stops running, excepting by mail, which is carried across the country from Quebec, Canada, three times each winter, in sleds drawn by dogs.

Ocean (foreign).—To the United States, there are two lines of steamers: Red Cross Line from New York via Halifax, Nova Scotia, semimonthly in summer and once a month in winter to St. Johns, Newfoundland. By the Allan Line from Philadelphia to Glasgow via St. Johns, also stopping on the return trip. The service is semimonthly. The time occupied in the voyage between St. Johns, Newfoundland, and the United States is about five to five and one-half days. Dobell and Black Diamond Lines of steamers run semimonthly between Montreal and St. Johns during the season. Navigation is open from about the 1st of May

to the 1st of November. The Furness Line runs from Halifax to Liver-

pool, calling at St. Johns each way semimonthly.

New wagon routes opened in 1898 are: Road connecting Port au Par with railway at the mouth of river St. George; distance, 12 miles. There is a road in course of construction from the bottom of White Bay, due south, to connect with the railway; distance, 35 miles.

Freight rates via railway are governed by rates adopted by the Canadian Freight Association. By steamers between St. Johns and Philadelphia, they average \$6 per ton; between St. Johns and New York, \$5 per ton; between St. Johns and Montreal, \$4 per ton; between

St. Johns and Liverpool, \$3.80 per ton.

# RATES OF POSTAGE.

Letters within the colony, from one place to another, 3 cents per ounce. City or drop letters for delivery by city carriers, 1 cent per ounce; Dominion of Canada, 3 cents per ounce; Great Britain, United States, St. Pierre, and all places in the Postal Union, 5 cents per half ounce. Letters containing gold or silver money, jewels, or precious articles, or any articles liable to customs duties, whether registered or not, can be forwarded by post to any country outside of Newfoundland. Unpaid and insufficiently paid letters are charged on delivery double the amount of postage remaining unpaid. Letters redirected to places in Newfoundland, Great Britain, Canada, and the United States, without being taken out of the post-office, are not liable to any additional postage. Newspapers within the colony are free; to Great Britain, Canada, and the United States, 1 cent per 2 ounces; postal cards for Newfoundland, 1 cent; Great Britain, Canada, the United States, and all places in the Postal Union, 2 cents each. Parcel post, United Kingdom and the United States, 12 cents per pound; maximum weight, 11 pounds; Canada, 15 cents per pound, not to exceed 7 pounds.

# ASSESSMENT.

Water rates (town), 6 per cent on appraised rental; vacant lands, 5 per cent on appraised rental; sewage rates, one-fifth of the above percentage. An annual tax of 1 cent per gross ton is charged for every steamship or steamboat or steam tug entering the port of St. Johns, to be paid by the master or owner once a year. Water rates (shipping), 5 cents per ton, not to exceed \$20, payable once a year, on all vessels entering the port of St. Johns. Coal duty, 30 cents per ton, collected on all coal imported at the port of St. Johns. A duty of 24 cents per ton is collected from every merchant ship or vessel, according to its registered tonnage, which may enter any port or place within the colony, except in the case of coasting, sealing, or fishing vessels registered in the colony. The duty is levied once a year.

## NEWFOUNDLAND LIGHT DUES.

Payable once in each year at the custom-houses, by foreign ships and by foreign-going ships registered in the colony. The rate is 24 cents per ton. Vessels under 40 tons, registered in the colony, \$3.46 each. Fishing vessels and vessels plying coastwise, registered in the colony, 12 cents per ton; no vessel to pay over \$115. Since the 1st of July, 1886, the collection of light dues on account of Cape Race has been abolished by Imperial Order in Council.

## RATES OF PILOTAGE.

For vessels in and out of St. Johns, under 80 tons, \$5.35; from 80 to 100 tons, \$6.70; from 100 to 120 tons, \$7.35; from 120 to 160 tons, \$8; from 160 to 200 tons, \$8.70; from 200 to 240 tons, \$9.35; from 240 to 280 tons, \$10; from 280 to 300 tons, \$10.70; from 300 to 350 tons, \$13.35; from 350 to 400 tons, \$16; from 400 to 500 tons, \$18.70; from 500 to 600 tons, \$21.35; from 600 to 700 tons, \$24; from 700 to 860 tons, \$26.70; over that size, for every additional 100 tons, \$1.35; on sailing vessels, not to exceed \$32. Steamers pay pilotage on their net tonnage, as in the case of sailing vessels. Steamers employed in the fisheries of the colony are exempt, except when on foreign yoyages. Coast steamers are also exempt. Subsidized mail steamers, in connection with the colony, pay at the rate of 8 cents for each horsepower. No steamer shall pay more than \$40 at one time.

All coast vessels which take pilots pay one half of the above rates of pilotage, in proportion to their tonnage. The above scale is payable on the registered tonnage of all such vessels, before going out of the harbor.

Her Majesty's vessels under sixth rate, pay \$14; under fourth rate, \$26; under first, second, and third rate, \$34.

# TOWAGE RATES, ST. JOHNS.

In and out of harbor, from 1 mile outside the heads to consignee's wharf, or from consignee's wharf to a mile outside the heads, the rates are as follows:

Vessels under 60 tons	\$4	351 to 400 tons	\$26
60 to 100 tons	`8	401 to 450 tons	28
101 to 125 tons	10	451 to 500 tons	30
126 to 150 tons	12	501 to 550 tons	32
		551 to 600 tons	
176 to 200 tons	16	601 to 700 tons	38
		701 to 800 tons	
		801 to 900 tons	
		900 to 1,000 tons	50
301 to 350 tons	24		

Vessels requiring the steamer to go beyond the above limits as far as Cape Spear, pay one-third additional, and any vessel requiring towage beyond the cape to the south, or an equal distance to the north, will be charged by special agreement. The above rates apply only in ordinary circumstances. Vessels in distress or otherwise disabled will have to make special contract for assistance. Vessels employing the steamer inward will be taken outward on their next voyage, at two-thirds of the above rates. Vessels using the steamer's hawser pay 10 per cent on towage rates for same.

One third in addition to the above rates will be charged during the winter season, from December 10 to April 10 each year.

# QUARANTINE.

Whenever a board of health or public health officer acting as such may deem it necessary to establish quarantine for the purpose of checking or preventing contagious diseases, he may use all necessary force to prevent anyone entering or leaving any dwelling house, building, place, boat, or vessel where quarantine has been established, except members of the medical or clerical profession, or under the direction of the board of health or public health officer.

# MERCHANT SHIPPING SERVICE.

Seagoing ships registered in this colony, their owners, masters, and crews, are subject in respect of shipping and discharge, agreements, wages and effects, rights, remedies, and penalties, to the law for the time being of Great Britain concerning colonial British registered ships when in the United Kingdom or out of the jurisdiction of their respective governments, as the case may be. The master or owner of every vessel registered in this colony and sailing on foreign voyages shall, before the entry of such vessel at the customs at the port of St. Johns, pay to the receiver-general the sum of 12 cents per month for every seaman on board such vessel, to be applied toward the support of the St. Johns Hospital, and the master or owner paying such amount may retain the same from the wages due to such seaman.

## GENERAL REMARKS.

There is no law in Newfoundland requiring goods to be marked so as to show the country of origin or manufacture.

Passports are not required in this colony. Commercial travelers are

not required to pay license.

While the imports from the United States into the colony of Newfoundland show an increase in 1897 of \$561,287 over 1896, I am satisfied, if American merchants and manufacturers made the same effort to secure this trade as do those of Canada and the United Kingdom, the imports from the United States would be largely increased. The total import in 1897 from the United States was \$2,135,008. Of this, flour, pork, bacon, salted beef, kerosene and olive oil, cordage, leather, and leather goods amounted to \$1,618,614, leaving but \$516,399 for other imports from the United States.

There are no obstacles in the way of the extension of American goods in this market with the opportunities offered, there being no preferential duty for any country, and shipments from New York and Philadelphia being regular and direct. There are many lines of our goods which would have a larger sale if the trade were properly looked after. The imports of structural iron, railway materials, machinery, hardware, manufactured cottons, rubber clothing, rubber footwear, boots and shoes, men's furnishing goods, and many lines of groceries

should be larger.

I am told that the trade in the maritime provinces is thoroughly canvassed by our commercial travelers; but very few of them make regular trips to Newfoundland, while representatives of British and Canadian houses make regular trips, and have established trade. When United States firms emulate the example of the English and Canadian houses and send competent agents, our goods will find a stronger foothold in Newfoundland; but not until then.

MARTIN J. CARTER, Consul.

St. Johns, November 5, 1898.

Total value of imports and exports of the colony of Newfoundland and Labrador from and to each country for fiscal year ended June 30, 1898.

Countries.	Imports.	Exports.	Countries.	Imports.	Exports.

## NOVA SCOTIA.

#### HALIFAX.

In compliance with Department of State circular of August 5, 1898, I submit the following report on the commerce and industries of the consular district of Halifax and the trade of this port with the United States.

## IMPORTS AND EXPORTS.

The total imports of Halifax port for the fiscal year ended June 30, 1898, amounted to \$4,807,737, of which \$2,944,067 were dutiable goods and \$1,863,670 free goods. Compared with the imports of 1897, there was a decrease of over 27 per cent in dutiable goods and a gain of over 10 per cent in free goods, a decrease in total imports of \$954,088, or over 16 per cent.

The imports from Great Britain for the two years mention	ed were—
1897—Dutiable goods	\$979, 919 707, 998
Total	. 1, 687, 917
1898—Dutiable goods	985, 148 731, 683
Total	1, 716, 831
showing an increase in imports from Great Britain of \$26 little over 1.7 per cent.  The imports from the United States for same two years we	
1897—Dutiable goodsFree goods	\$817, 386
	<b>433,</b> 070
Total	433, 070
Total	433, 070 1, 250, 456 686, 432

showing increased imports from the United States of \$48,537, or a gain of 3.8 per cent. It is to be noted in this connection, however, that in dutiable goods, there was a decreased importation of \$130,954, or some 15 per cent, which was overcome only by a very large increase in the importation of free goods.

The imports from all other countries were—

1897—Dutiable goods Free goods	\$2, 279, 341 544, 111
Total	
1898—Dutiable goods Free goods	1, 272, 487 519, 426
Total	1, 791, 913

showing decreased imports from all other countries of \$1,031,539, or over 36 per cent, nearly all of which was in dutiable goods.

The total exports from the port of Halifax for the fiscal year of 1897 amounted to \$6,435,726; for the fiscal year of 1898, to \$6,219,513, a

decrease or over 3 per cent.

The exports from the port of Halfax to the United States, as indicated by the invoices certified at this consulate for the fiscal year 1897, were \$593,327.17; 1898, \$503,381.47, a decrease of \$89,945.70, or 15 per cent.

I give below a partial itemization of the imports at this port from Great Britain and the United States, for the fiscal years ended June 30, 1897, and June 30, 1898:

Grand totals	1, 920, 236	47, 843	1, 966, 079

The exports from this port to the United States, as indicated by invoices certified at this office, for the three months ending September 30, 1898, amounted to \$130,690.94, or \$4,275 more than for the corresponding three months one year ago. The invoices certified at the three consular agencies of this district during the same period amounted to \$73,338.06, or \$66,614.13 more than for the corresponding three months of last year.

The following table, showing imports at this port from the West Indies for the fiscal year 1898, other than British West Indies, may be of interest:

Value.	Articles.	Value.
146, 286	Wood	. 80
457		
	\$8, 429 146, 286 72, 906 457	#8, 429 Hides

I am not at this time able to obtain any corresponding table of exports to these islands from this port. Very nearly all the imports mentioned above were from Cuba and Porto Rico.

<sup>&</sup>lt;sup>1</sup> For the fiscal year 1897, the exports to the Spanish West Indies from Nova Scotia amounted to \$1,106,884.

#### PRICES.

Below are given the prices of certain staple commodities at Halifax on September 15, 1898, as compared with prices of same commodities on September 16, 1897:

	189	8.	1897	7.
dodo		2. 10 16. 00	\$6.00 to 2.10 to	
doper gallonper pounddo	.31 to .26 to .24 to	. 124 . 32 . 30	. 23 to . 24 to	. 13 . 28
dodo	.041to	. 0 <del>4]</del> . 16	. 03½ to	. 031 . 042 . 24 2. 50
do per barreldo	2.00 to	2. 25 2. 25 12. 00		1.75 2.75 11.00
do per bushel	. 11 to			. 124
	do   do   do   do   do   do   do   do		do   2 10   16 00   16 00   16 00   16 00   16 00   16 00   12   12   12   12   12   12   12	

Nine of these commodities show advances, six are quoted the same, and seven have declined in price.

# IMPROVEMENTS.

A wheat elevator, of the capacity of 500,000 bushels, is now in process of construction at Halifax, to replace one burned some years ago, and to give better facilities for the shipment of grain from this port. A floating elevator will also be placed in the harbor within a few weeks.

Last February, the Intercolonial Railway obtained control of the Drummond County Railway, and has therefore a continuous line to Montreal, which is reached by a run of 837 miles in twenty seven hours. The Canadian Pacific Railway has running privilege over the Intercolonial to St. John, and makes the run from this city to Montreal without change of cars in twenty-six hours.

#### SHIPPING.

During the calendar year 1897, the arrivals of vessels at this port were:

Nationality.	Number.	Tonnage.	Number of men.
British steamers British sail Foreign steamers Foreign sail Total	306 111	481, 713 48, 089 109, 047 48, 934 687, 783	14, 601 1, 778 3, 815 1, 628

United States vessels of all kinds numbered 111, with a tonnage of 50,649 and 2,714 men.

The number of steamers and vessels on the register at this port on December 31, 1897, was 474, with net tonnage of 27,745. Those struck off from the register during the calendar year 1897 numbered 340, with tonnage of 16,797. Those added to register numbered 11, with tonnage of 369.

#### FISHERIES.

The last report of the department of marine and fisheries for the Dominion of Canada, covering the fiscal year 1897, places the entire value of the production of Canadian fisheries for the calendar year 1896 at \$20,407,424. Of this total, Nova Scotia is credited with \$6,070,895; New Brunswick, with \$4,799,433; Prince Edward Island, with \$976,126; British Columbia, with \$4,183,999; Quebec, with \$2,025,754; Ontario, with \$1,605,674, and Manitoba and Northwest Territories, with \$745,543.

By figures just obtained from the same department, I learn that during the calendar year 1897 the production of Nova Scotia was increased to \$8.090.346.

The details of the total provincial production were as follows:

Cod, all kinds		Alewives	<b>\$</b> 56, 860
Haddock, all kinds		Eels	33, 260
Hake, all kinds	250, 521	Bass	1, 365
Pollock, all kinds		Mackerel	463, 372
Tomcod	6, 067	Lobsters	2, 191, 263
Halibut	98, 618	Oysters	9,488
Flounders	11, 962	Squid	32, 668
Salmon, all kinds		Coarse and mixed fish	97, 561
Trout	8, 294	Hair seal skins	419
Smelts	15, 071	Fish oil	75, 852
Herring	540, 276	Fish used as bait	131, 936
Shad	38, 100	Fish used as manure	11, 755

The same authority places the total capital interested in Canadian fisheries in 1896 at \$9,826,251, and estimates the total number of fishermen employed at 75,237. Nova Scotia is credited with \$3,069,753 of the above capital, and the number of fishermen employed for the province is placed at 24,975.

The total value of the lobster catch in 1896 was \$2,205,762, of which

\$1,322,905 was credited to Nova Scotia.

A comparison of the catch of the year 1896 with that of 1897 indicates a very large increase in production, presumably due to the large increase in number of men and amount of gear employed, and to the advance in price. Canned lobsters for export sold at this port in 1888 at \$6 per case; in 1889, at \$6.50; in 1891, at \$7.75; in 1896, at \$8.50; in 1897, at \$9; in 1898, at \$10.

The Halifax Herald of October 13, 1898, states that the exports of canned lobsters from this port reached a total value in 1896 of \$1,407,-105; in 1897, of \$1,350,000, and (up to date of newspaper) in 1898, \$1,272,770; over 70 per cent of this export going to Great Britain and less than 10 per cent to the United States. The writer of the newspaper article above referred to expresses the belief that the maximum lobster catch was reached in 1897, and that the catch of 1898 will be some 16,000 cases less than for the preceding year.

The Dominion government has recently appointed a commission to investigate the subject of the lobster fishery, and suggest measures for its better protection.

The manager of the cotton mills in this city refuses to answer any of the questions submitted by the Department relative to the coarser classes of cotton textiles manufactured or consumed in this district, and I know no other source here from which the information could be be obtained.

John G. Foster, Consul-Genera.

HALIFAX, October 31, 1898.

#### SYDNEY.

In compliance with circular of August 5, 1898, I have to state that the business carried on in this district is largely composed of the mining of bituminous coal for Canadian consumption and export to the Eastern ports of the United States, and the export of fresh and salt fish, canned lobsters, small quantities of hard-wood lumber, spruce piling, ships'

knees, lambs, green hides, grindstones, and building stone.

The imports from the United States are small in quantity. But few representatives of United States business firms visit this portion of Canada, while Canadian firms in all classes of manufactures have agents who visit the merchants here frequently, and consequently, it is an exception when goods manufactured in the United States are seen in the stores for sale. The preferential tariff in favor of Great Britain also affects the handling of goods from the United States in this market. The total imports from the United States into this consular district, during the last fiscal year, will approximate \$200,000, and were composed largely of machinery for mining purposes and oil wells, mechanics' tools, hard-pine lumber, jewelry, corn in bulk, corn meal, bicycles, kerosene oil, cotton goods, hides, and a few other articles in small quantities.

Boots, shoes, textile fabrics, and furniture of United States manufacture are hardly known here, goods of that character being almost

entirely of Canadian manufacture.

There are no restrictions in regard to commercial representatives, and the banking facilities are good, with rates of exchange fair. Canadian firms give long credits, which materially help them to control and hold the trade. Transportation facilities for merchandise between the United States and this district are excellent, both by rail and water, there being several lines of steamers sailing from the United States to various ports at regular intervals, while large numbers of sailing vessels are constantly plying between the two countries, reducing freight charges to a minimum.

From replies received from the agents connected with this consulate, and from my personal observation, I am fully of the opinion that the high duty imposed by the Canadian tariff on imports into this country from the United States is the reason for the small amount of business transacted; but I think if representatives of reliable firms for boots and shoes and textile goods, such as calicoes, ginghams, woolen dress goods of medium weight and cost, should visit and solicit trade, a good business could be built up in a short time.

There are comparatively no manufacturing industries in this district. As I said before, the principal occupation and business of the entire district consist of mining, fishing, and agriculture, and goods intended for sale in this country should be of a strong, durable nature, to meet

the requirements of the work.

The merchants and business men of this section, without exception, express themselves as desiring closer trade relations. Especially is this true in regard to fishermen. Large numbers visit ports in this

island for shelter and repair, and this section of the country feels keenly the loss of trade which they formerly had with them.

There are several companies now formed to develop new bituminous coal areas. The ports of shipment on this island are New Campbelltown, Broad Cove, and Port Morien.

The inclosed statement contains a list of goods imported from the United States, so far as I have been able to procure it from the consular agents and collectors of customs here.

GEORGE N. WEST, Consul.

Imports from the United States to the consular district of Sydney, Nova Scotia, Canada, from July 1, 1897, to June 30, 1898.

# WINDSOR.

In obedience to instructions from the Department of State, in the circular of August 5, 1898, I submit the following report. The circular says:

The Department is not so much concerned as to obtaining detailed figures with the stamp of official accuracy, as securing an intelligent survey of industrial activity and general tendencies of trade. The business men of the United States are particularly interested in learning whether there has been an increase or decrease in the more important lines of exports and imports, especially such as enter into the trade of the United States.

In other words, the people of the United States are interested in finding a foreign market which will relieve the home market of its surplus. Other things being equal, our best market is found among a people like our own, a people of kindred tastes, wants, fashions, and education. In this respect the Canadians, especially of this Province and consular district, are like the people of the United States.

The people of Nova Scotia are of Anglo-Saxon stock, English speaking, and distinctively more American in their tastes, culture, and fashions than English. In fact, nearly half of the people here are connected by blood, marriage, and business with the people in the United States, and consequently, there is no prejudice against our markets or products, but if anything, a preference for them.

## COMMERCE.

The following figures, taken from the Statistical Year Book of Canada for 1897, just published, give the total values of the principal articles imported and exported by Canada from and to Great Britain and the United States, respectively:

Exports to Great Britain	\$77, 227, 502 29, 339, 576
Excess of exports	
Imports from the United States.  Exports to the United States.	49, 373, 472
Excess of imports	, ,
Imports from the United States	70, 776, 316 29, 339, 576
United States excess over Great Britain imports	41, 436, 740
From these figures it appears that the balances betwee and exports were as follows:	n imports
In favor of the United States against Conede	401 400 044

That is, Canada out of her \$47,000,000 surplus exports to Great Britain, paid off \$21,000,000 surplus exports due the United States, and then had left over \$26,000,000 surplus profits derived from Great Britain.

Canada has purchased from the United States at the rate of \$14 per capita, and from Great Britain only at the rate of \$6 per capita; during the same year, she has sold to Great Britain at the rate of \$15 per capita, and only purchased from the United States at the rate of \$10 per capita. This includes goods both dutiable and free.

During the same year, the total amount of duty collected on British goods was \$6,205,367, or 31.20 per cent; on goods from the United

States, \$8,147,075, or 40.96 per cent.

The imports of free goods from the United States were 50 per cent, while only 30 per cent of the imports from Great Britain were on the free list.

The imports into Nova Scotia from all countries, for 1897, were \$7,657,232, of which \$5,177,037 were dutiable and \$2,480,155 were

Of those imports, over 40 per cent were from the United States.

The imports from the United States at this port (Windsor) for the year ending June 30, 1898, were:

Dutiable goodsFree goods	
Total importations	148.733

These figures show that Canada has been a good customer of the United States, purchasing from us more goods per capita than any other country.

The South Sea islander, whose only article of clothing is a cheap cloth tied around his loins, will never be as good customers as the

Canadians.

In this Province, all kinds of improved American machinery are in use and demand, such as mowing machines and agricultural implements, wagons, carriages, bicycles and other vehicles, phonographs, clocks, watches, boots, shoes, hats, caps, sewing machines, machinery for saw-mills, cotton mills, furniture factories, printing offices, cutlery, hardware, barbed-wire fencing, stoves, ranges, plumbers' materials and machinery, electric-light fixtures, canned goods, indian corn, wheat, and provisions of all kinds. Two articles could be more extensively imported and sold here than at present: Indian corn and American oak.

Indian corn does not mature in Canada, and therefore, the American corn grower has no competition in the Canadian home market. Corn meal would sell well. American oak is so superior to the Canadian that it is especially in demand at furniture factories, and is now being shipped in carloads by rail to the factories of Windsor. It is also used for finishing in public buildings, churches, schoolhouses, and the more costly private dwellings. In price, American oak ranges from \$40 to

\$90 per thousand and upward.

On nearly all these articles, there is a tariff of from 25 to 35 per cent ad valorem, and since the 1st of July last, there has been a preferential tariff of 25 per cent in favor of Great Britain against the United States.

The books of this consular district and of the collectors of customs here show a falling off in both exports and imports during the past year. The Dingley tariff bill affects the export of a large number of articles to the United States, such as lumber, coal, and agricultural products. The people here are beginning to manufacture for themselves, and rapidly learning to raise their own foods and furnish their own home markets.

The American exporter, to hold the field, must compete with both the Canadian home market, and the Canadian preferential tariff in favor of Great Britain.

# MANUFACTURES.

The Dominion Cotton Mills Company (Limited) has eight factories located in the different Provinces of the Dominion, all in active and profitable operation. One, probably the smallest, located here, furnishes the following statement of production, cost, etc., for the fiscal year:

Cotton consumed	1, 275, 000
Yards of cloth manufactured	4, 335, 000
Value	\$195,095
Hands employed	200
Number of looms	270
Number of spindles	11,000
Wages per month	<b>\$3,500</b>
Number of spindles. Wages per month. Wages per year.	\$42,000

About one-half of the cloths made consists of sheetings and drills, designated gray cottons, and are disposed of in the markets of China, while the other half is sent to another factory of the company, the Magog mill, and printed and finished for the Canadian market.

Many of the machines in the mill, the superintendent informs me, are

of the old style; the best machinery with modern improvements is of United States make. The cotton used at this mill is all grown in the United States.

The Windsor Furniture Factory, which was totally destroyed by the great fire at this place a year ago, has reorganized its company and rebuilt, with the latest and best machinery from the United States. The capital is about \$40,000, and about 30 hands are employed.

The Windsor foundry, which was also destroyed by fire, is about rebuilt, and soon will be turning out stoves, ranges, and various other

castings.

In addition to these, there is a fertilizer factory and bone mill and a

selenite plaster factory.

There are also, near Windsor, extensive mills engaged in the manufacture of lumber, most of which is shipped to South America and Great Britain. Formerly, much of it went to the United States, but this export has ceased.

#### AGRICULTURE.

The chief agricultural products are hay, apples, and potatoes; there is but little export of hay, but the apples are shipped in large quantities to England, and some few to the United States. The cost of transportation and shipping, including commission, is about \$1 per barrel.

Large quantities of potatoes are also raised in Coruwallis Valley and marketed in Cuba. From Kingsport, from 60,000 to 80,000 barrels

are shipped to Cuba annually.

In the Port Joggings agency, the farmers are keeping more cows and entering more extensively into the dairy business. At St. Nappan, near River Hebert, there is a cheese factory, and the output seems to be large and profitable. It is situated in a fine farming district, near Amherst.

### MINES.

The following is a summary of the production of the mines of Nova Scotia for the year 1897:

Goldonnces Iron oretous	26, 579 56, 334
Manganese ore do	100
Coke madedodo	45, 000

Of these minerals, this consular district produces gold, manganese,

gypsum, and coal.

There were mined this year at the Joggins mines, in Cumberland County, 70,000 tons of coal. The price at the mines was \$2 and \$2.50 per ton. The same coal retails at Windsor at \$4 per ton. Heretofore, much coal was shipped from the mines of Nova Scotia to the United States, but that has almost entirely ceased since the passage of the tariff bill of 1897.

Mr. Gilpin, superintendent of mines, in his last report of the gold mines of Nova Scotia, says:

Until a few years ago, the local capitalist wanted something rich, a fortune without labor, extracted from a golden bunch of quartz or from the pocket of an innocent investor. Now, however, the fact is recognized that gold mining is a business, not necessarily a roseate speculation, and veins and deposits are being profitably worked, on business principles, which a few years ago would have been spurned. Since this principle has been accepted, it is safe to say that the gold interests of this

Province have an assured future. The guaranty of this is the fact that we have local investors who can mine and mill quartz profitably, on a small scale, when the quartz crushed does not yield over \$2 per ton.

There are also valuable mines of manganese and antimony which are now idle, and which could be made profitable if properly taken hold of and developed. Enterprising American capitalists would do well to look into the mines of Nova Scotia.

#### FISHERIES.

The fisheries of Nova Scotia constitute another great industry and source of employment to her people, and their value is greater than those of any other Province of the Dominion. The exports of the fisheries in 1897 were over \$4,500,000, giving employment to 12,000 men and 8,000 fishing boats. Nova Scotia employs as many men and boats in fisheries as all the other Provinces of the Dominion.

# BANKING AND CURRENCY.

The currency of Canada is in many respects like that of the United States. It is decimal, computed in dollars and cents, and not in pounds, shillings, and pence.

Practically, paper money is the main currency in use, although it is supplemented by small silver and copper coins. The silver dollar is not used or coined. Canada has no mint, the subsidiary coin being made in England.

The paper money consists of bank notes and Dominion notes, the

one issued by the banks, the other by the government.

Banks are bound to redeem their bills in gold or "Dominion notes," and, for that purpose, must always keep on deposit 40 per cent of their reserves. The government or Dominion notes are redeemable in gold.

The Statistical Year Book of Canada gives the whole amount of currency held by the banks in Canada, in 1897, as follows:

Specie on deposit	\$8, 663, 459 15, 921, 435
Dominion notes in circulation	7, 796, 427
Total amount of bills and specie	66, 731, 439

While Canada has the decimal system in her fractional silver currency and paper money, she has no gold coins in which to redeem her bills. She uses English sovereigns or the gold of the United States.

# BANK IN WINDSOR.

The Commercial Bank of Windsor furnishes the following figures in its annual statement of January 31, 1898:

Capital stock authorized, \$500,000.

# LIABILITIES.

Capital stock paid up	\$348, 380. 00 132, 590. 00
Reserve fund         \$113, 000. 00           Profit and loss         11, 067. 92           Other liabilities	
Other liabilities	736, 594. 52
Total liabilities	1 341 632 44

ASSETS	•
Specie	\$19,777,86
Specie	22, 374. 00
All other assets	1, 299, 480, 65
•	
Total assets	

Net profit for year, after providing for bad and doubtful debts, \$25,109.96.

## UNITED STATES MONEY IN CANADA.

One thing worthy of note is that paper money and gold of the United States circulate on a par with Canadian money. Greenbacks, national-bank notes, and silver certificates are taken at the banks, the railroad offices, the stores, and among the people as readily as their own bank bills; but silver coin of the United States will not circulate here at all, and is only taken at 20 per cent discount.

It is anomalous that a United States silver certificate should be current here and pass so readily at its face value, without discount, and yet that the United States silver dollar, a legal tender in which the certificate is payable, will not pass at all, or only at a discount of 20 cents on the dollar. The banks would readily receive \$1,000 in United States silver certificates at par on deposit, but \$1,000 in United States legal-tender silver dollars they would not receive on deposit at all.

There was but one time during the last eight years when the paper money of the United States did not circulate at par with Canadian money, and that was during the Presidential campaign of 1896. Immediately after the nomination of the Presidential candidates, "American paper money" as it is called, ceased to circulate here at par, and was taken only at a discount. This continued until after the November election, when "American money" immediately rose to par, and has circulated freely at par ever since.

## THE WINDSOR FIRE.

On the 17th of October, 1897, the town of Windsor was almost entirely destroyed by fire and nearly 3,000 people rendered homeless. The destruction was complete—stores, business houses, factories, churches, court-house, custom-house, and consul's office all being swept away.

Winter was near at hand and the case looked desperate. Kind friends came to the assistance of the people and charities flowed in like water. In a short time, over \$70,000 in money and goods were sent to the Windsor sufferers. These contributions came from the neighboring towns and provinces of Canada, and also from the United States.

More than \$1,000,000 worth of property was destroyed, but of this, more than \$800,000 worth was covered by insurance which has all been paid without litigation.

Of the town's restoration, the Windsor Tribune says:

A year has passed and a large part of the town has been rebuilt.

Over 200 buildings have been erected, without counting the outbuildings or ware-houses. Of these buildings, 20 are brick, and contain 40 stores, without counting offices or halls.

The wooden buildings contain some 43 stores, the rest being dwellings—over 20 being double houses, and 3 tenements of 4 houses each. Besides these, the courthouse has been rebuilt, the Windsor Furniture Factory, with its warehouses, the Windsor Plaster Company's mill and warehouses, the wood-working mill of Chapelle Brothers, the schoolhouse, the post-office and government military drill shed at the fort are all nearing completion. With a few exceptions, these buildings are all of a permanent character, and many are of a character which would do credit to a larger town.

JOSEPH T. HOKE, Consul.

# PRINCE EDWARD ISLAND.

The imports and exports for the Province of Prince Edward Island, as taken from "Trade and Navigation," issued by the Dominion Government for the fiscal year 1896, were:

Imports:	
Dutiable	
Free	174, 704
Total	
Total exports	979, 979
Imports from United States	132, 498
Exports to United States	444, 058
For the fiscal year 1897:	
Imports:	
Dutiable	\$277, 340
Free	144, 655
Total	•
Total exports	1. 314. 607
Imports from United States	132, 433
Exports to United States.	430, 287

It is impossible to procure the correct value imported to this Province from the United States, as a large amount of goods is imported through other Canadian ports, and sold here.

Wages.—Laborers receive \$1 per day; domestic servants, \$1 to \$10 per month; clerks in stores, \$15 to \$50 per month; bookkeepers, an

average of \$50 per month.

The exports from this Province consist mostly of agricultural products and fish. The lobster pack continues to be a very important factor in the trade, and although the crustacean is decreasing in size and numbers, this has so tended to enhance the value of the canned article that the receipts from this source compare favorably with those of former years. During this season, a large quantity of these goods has been exported to France.

Mackerel of extra quality were taken during the past year, but catches

were poor.

The transportation facilities in summer are by rail to Summerside, thence by steamer to Point Durham, or by steamer from Charlottetown to Pictou, there making railway connection. The Plant Line steamers make weekly trips between Boston and Charlottetown, while steamers owned by the Quebec Steamship Company and the Black Diamond and Dabell lines call here from Montreal. The steamer City of Ghent makes weekly trips between Halifax and Charlottetown. During the winter season, connection is made with the mainland at Pictou by steamer from Georgetown.

Prince Edward Island has 210 miles of railway, extending from Charlottetown to Summerside and Tignish in the west, and to Souris and Georgetown in the east, with a branch line to Cape Traverse, the latter connecting with the ice boat service, which is performed by boats on runners, hauled over the ice during the most severe period in each winter, when the steamer is unable to keep up regular connection with

the mainland.

Fifty per cent or more of the shelf hardware purchased here is imported from the United States. There is also a large importation of bicycles, farm implements and machinery, ladies' and gentlemen's hats and caps, etc. Dry goods are not purchased to any extent, on account of duties.

To increase trade, the wholesale dealers of the United States should be represented more by their commercial travelers, or have a resident agent, as is done by many London dealers. Oredits are usually sixty days, but merchants discount bills.

DELMER J. VAIL, Consul.

CHARLOTTETOWN, August 12, 1898.

# QUEBEC.

Principal articles of merchandise imported into Quebec during the year ending December 31, 1897, showing the share of Great Britain and the United States.

# GASPÉ BASIN.

I transmit herewith my annual report for the fiscal year ended June 30, 1898.

#### FISHERIES.

Cod.—This fishery, which is the main industry for this consular district, is gradually falling off year by year, both in quantity and price.

Salmon.—This fishery has been better during the past season than

for years; in fact, it is increasing every year.

Smelt.—This fishery has also been excellent during the past season. The fish are nearly all shipped fresh from this port to Fulton market, New York, but I am unable to give the amount, as they are sent in small lots of under \$100 in value to different parties.

# NAVIGATION.

The vessels of the marine police force comprise six steamers and two schooners.

Four United States steam yachts and one schooner called at this port

during the past year.

This port (Gaspé) was open to navigation this spring on the 3d of May and closed on the 6th of December, 1897. The light-ship at Sandy Beach, which is at the mouth of this harbor, went into winter quarters, and the harbor light was extinguished and the storm-signal station closed on the above date.

I may mention that a vessel arrived here on the 16th of December last, and loaded and sailed on the 22d for Rio de Janeiro. This is the latest a vessel was ever known to sail from this port.

# PETROLEUM.

During the past year, very little was done toward the development of petroleum deposits of this district. In August, 1897, lands were said to have been purchased with a view to the formation of a new company and immediate prospecting on a new and large scale.

Nothing has been done, and it seems that the whole business is a speculation. I have not heard of a survey of the land having been

made or of the issue of letters patent for the same.

The old company—the Petroleum Oil Trust Company—has not been doing more than just keeping two wells going. There were four wells at work in the beginning of 1897. All the finds seem to turn out, sooner or later, to be no more than pockets. At first, there is a rush of oil and gas, and then it dwindles down to nothing. This is the district in regard to which I made a special report to the Department in July, 1897. (See Consular Reports, No. 205, October, 1897, p. 299.)

# THE BAY OF CHALEUR RAILWAY.

This road has been completed as far as New Carlisle, about 100 miles from Gaspé Basin. The president of the company is now in England, trying to raise money to complete it from New Carlisle to Gaspé Basin. It is also said that there is an attempt to make New Carlisle the terminus of the railroad and to construct an artificial harbor there.

## PORT CHARGES AND WHARFAGE.

The only port charges are the harbor master's dues, which are—For every ship of 200 tons or under (registered tonnage), \$1. For every ship of more than 200 tons but not more than 300 tons, \$2. For every ship of more than 300 tons but not more than 400 tons, \$3. For every ship over 400 tons, \$4. Wharfage rates are from 50 cents to \$3 per day.

#### TRADE.

There are no regulations affecting commercial travelers, and they are exempt from any tax in this district.

I may mention that there is practically no manufacturing of any kind here.

Value of declared exports from the consular district of Gaspé Basin, Quebec, to the United States during the fiscal year nding June 30, 1898.

# TRADE WITH OTHER COUNTRIES.

The following statement shows the exports and imports from this consular district to foreign countries, exclusive of the United States, for the fiscal year ended June 30, 1898. It has been condensed from custom-house entries for the fiscal year ended June 30, 1898:

For the fiscal year ending June 30, 1898, the exports of dry codfish were 19,392 quintals, valued at \$77,571. They were shipped to Barbados (West Indies), Brazil, Italy, Spain, and Jersey (Great Britain). Lumber deals, etc., were valued at \$101,875, and were shipped by vessels under the British flag.

The imports for the same period consist of general merchandise, valued at \$175; nets, lines, and twine, \$837; salt, \$2,136; sugar and molasses, \$2,822.

From the consular-agency district at Paspebiac, in this consular district, for the fiscal year ended June 30, 1898, there were exported 40,021 quintals of dry codfish, valued at \$160,086; lumber, \$105,165, and sundries, \$255.

The imports were: Dry goods and small wares, \$15,000; salt, \$10,000; sugar and

molasses, \$18,000.

Gaspé Basin, on account of its beautiful scenery, good bathing, and good fishing, is becoming more and more a fashionable resort for tourists and sportsmen, and is growing better known to our people. I am convinced that sooner or later it will become a favorite spot for summer residence.

ALMAR F. DICKSON, Consul.

GASPÉ BASIN, August 20, 1898.

#### RIMOUSKI.1

This is an agricultural district, producing nearly everything the farmer wants, so he is not a large purchaser. The market for much of his produce is limited. Milk he takes to the butter and cheese factories and receives his proportion of the profits. Potatoes of excellent quality are shipped to Montreal and Ontario; also to the United States, when the price is high enough there to stand the duty of 25 cents per bushel. The shipments to the United States from January 1 to July 1, 1898, amounted to 70,407 bushels, valued at \$21,502.68. The lumber shanties create a demand for hay and oats.

The farmer raises wheat enough for his flour, some rye, barley, pease, and oats; besides, he has a small patch of tobacco for his own smoking. He keeps sheep, and the wool is worked up at home into clothing,

blankets, and carpets.

The soil is very good, and along the St. Lawrence River herring are used for fertilizer; also what is called here "varac," or a mixture of seaweed, sea grass, and kelp that comes ashore after a storm. It looks strange to see tobacco growing so far north.

The customs of the people are old-fashioned and primitive. The grain is largely cut with sickles. Spinning wheels are sold at all the stores. Hay is sold by the load, not weight, as there are no hay scales

in the country.

Most of the goods used in the district are purchased at Quebec or Montreal, so the custom-house here does not show the amount of United

States goods imported.

The following American goods are used, and more might be sold if pushed by agents at the proper time: Sawmill machinery, saws, and files, especially shingle mills and shingle saws; builders' hardware,

scales, California fruits and wines. The latter are better and cheaper than any wines sold here. A salesman could work up a good trade, by

visiting the small places in the district.

The cartridges and rifles used are nearly all manufactured at New Haven, Conn. This is a good market for sportsman's goods. All kinds of fishing tackle sell well. Nets for salmon and herring are in good demand.

Boots and shoes of a grade that could be sold for about \$1 per pair

wholesale, would find a ready market.

Almost every farmer has a good team. I believe a grade of open spring wagons and covered phaetons could be sold in considerable numbers. An Indiana company has sold wagons that cost, delivered here and duty paid, \$37, and they were better and cheaper than could be bought in Canada. The vehicles most used are buckboards with a cheap cover over the front seat. The retail price is \$45 for single-seated and \$50 for double-seated ones. They are made very roughly, and could be manufactured in the United States and sold here, duty paid, at a profit. Bicycles and fixtures come largely from the United States. There is a good market for a moderate-priced wheel here.

Cottons are nearly all manufactured in Canada. I find a few fancy patterns from the Cocheco mills, and women's dress goods, mixed cotton

and wool, come largely from the United States.

The principal imports at the custom-house here are household goods, belonging to people who have been employed in the United States. From January 1, 1897, to January 1, 1898, \$12,889 worth, and from January 1, 1898, to July 1, 1898, \$23,471 worth were imported.

The rate of wages paid in the consular district of Rimouski is as follows:

Occupation.	Compensation.
Employed on the Intercolonial Railway (a Government road):	
Station agentsper mor	nth \$33.00 to \$50.00
Telegraph operators	0
Section bossesper d	
Section handsd	0 1.1
Jarpenters d	
sawmill employees:	5,75
Head sawyerde	0 2.00
Tail sawyerd	
Shingle sawyerde	
Shingle binderper 1,	
Laborers per d	
Sea-grass employees:	
Foremanper mor	nth 26.00
Carter and teamde	
Head scow man	
Laborers	
Lumber-shanty men:	20.00
Cookde	0 414.0
Chopperde	
Laborersd	
Log drivers	
House servants:	U W 12.00 10 13.00
Women cooksper mor	nth 5, 00 to 8, 00
Ordinary helpd	

a And board.

The cost of living here is as high as in the United States, when you live as well. There is nothing to compensate for the lower rate of wages. The sawmills run only from May till November. Sea grass is cut from

July 1 to October 1. The lumber shanties run during the winter, and log driving is carried on for about two months in the spring. Employment is not continuous in any of the industries, and there is much time lost.

CHARLES A. BOARDMAN, Commercial Agent.

RIMOUSKI, October 25, 1898.

#### SHERBROOKE.1

The city of Sherbrooke is situated at the junction of the Magog and St. Francis rivers. It is 100 miles east of Montreal, 140 miles southwest of Quebec. and the third largest city in the Province of Quebec. It has a population of 11,000.

## TRADE.

The declared exports from this consulate and its agencies at Cookshire and Megantic for the first six months of 1898 amounted to \$289,750.92, and were divided as follows:

Articles.	Value.	Articles.	Value.
American goods returned	1, 249, 50 69, 365, 00 269, 85 298, 00 400, 00 574, 00 14, 041, 25 21, 808, 50 5, 920, 00 6, 516, 26 217, 50 1, 372, 67 1, 372, 67	Miscellaneous, buckwheat flour, dry goods, horn Potatoes Pulp chemical Pulp wood. Pyrites, copper Rollers, copper Ship's knees Squared cedar Sugar maple Sulphur ore Sundries. Telegraph poles Ties Tobacco Tweed, woolen	820. 60 216. 00 59, 078. 90 10, 108. 36 168. 00 187. 00 767. 90 1, 400. 00 19, 683. 85 16. 00 2, 362. 65 1, 800. 30 225. 00
Matte, copper	4. 261. 20	Total	289, 750, 92

It is impossible at this time to furnish a statement of the imports for the first half of the year 1898.

# WAGES.

The wages for labor are somewhat lower than those paid in New England for similar work. The table below shows the price of labor at the present time:

Occupation.	Compensation.
Laborers	8.00 to 12.00 1.50 to 3.00

<sup>1</sup> In reply to circular of August 5.

## TRANSPORTATION.

The transportation facilities for this section of Canada are of the best. This city has the advantage of four different railway lines—the Boston and Maine, the Canadian Pacific, the Grand Trunk, and Quebec Central. Freight rates are low and competition active.

# INTRODUCTION OF UNITED STATES GOODS.

More advertising should be used to introduce our products into the markets of Canada, and more commercial travelers should cover this territory. The chief obstacle is the high Canadian tariff, but in spite of this, United States goods are bound to come to the front when properly advertised, and when the knowledge is brought home to the consumer that they are of a superior grade to those manufactured here.

Our commercial travelers are not obliged to pay any license fees in

this Province.

## MINES.

The copper mines of the Eustis Mining Company are located at Eustis, Quebec, 8 miles south of Sherbrooke. These mines are in active operation, and this company shipped ore to the United States during the first half of the year 1898 valued at \$19,683.85.

The asbestus mines, at Black Lake, Thetford, and Broughton, produce largely, and the greater portion is shipped to the United States.

A few years ago, this land was not worth more than \$2 an acre; now, the estimated value of the Thetford asbestus mines is \$2,000,000.

Gold is also found along the course of the St. Francis River, though

not in sufficient quantity, as yet, to pay to mine it.

Iron is produced at Black Lake, and a considerable quantity of chrome ore is shipped annually to the United States.

## LUMBER.

Lumber and its manufacture is one of the leading industries of this Province. Very little lumber has been exported to the United States during the past year, on account of the high rate of duty. The cut of last winter was mostly sent to South America and England. Some shingles and clapboards have been exported to the United States. A reduction in the tariff rate would result in a large increase export of of lumber to the United States, and a corresponding increase in reciprocal trade.

PAUL LANG, Consul.

SHERBROOKE, October 28, 1898.

#### THREE RIVERS.

## IMPORTS.

The entries at the custom-house for the district of Three Rivers show that the total imports for the fiscal year ending June 30, 1898, were valued at \$400,011, of which \$314,807 were dutiable, and \$85,204 free, the duty paid amounting to \$90,171.73.

The following is a tabulated comparison of these figures with those for the fiscal year ending June 30, 1897:

Year.	Total imports.	For duty.	Free.	Duty paid.
1897.	\$116, 716	\$61, 493	\$55, <b>22</b> 3	\$22, 467. 51
1898.	400, 011	314, 807	85, <b>204</b>	90, 171. 73

These figures show an increase in total imports of \$283,295, of which \$253,314 was in dutiable goods; \$29,981 in free goods, and \$67,704.22 in duty paid.

Of the total imports, the United States furnished \$302,022 dutiable, and \$84,378 free goods, or, as compared with the fiscal year ending June 30, 1897, as follows:

Year.	Total imports.	Dutiable.	Free.
1897	<b>\$96</b> , 153	\$41, 462	\$54, 691
	386, 400	302, 022	84, 378

It is gratifying to note the extraordinary increase in imports from the United States. Our imports increased \$290,247, \$260,560 of which was in dutiable goods, and \$29,687 in free goods.

The following table shows the principal articles that have been imported from the United States, during the fiscal year ending June 30, 1898:

Articles.	Value.	Articles.	Value.
Animals, and their produce. Books, advertising pamphlets, chromos, etc Brass, and manufactures of. Breadstuffs Coal Cotton, manufactures of Drugs Gravels and sands. Glove fasteners, eyelets, etc.	629 7, 840 336 14, 733 760 4, 147 1, 797	Indian corn.  Iron, and manufactures of.  Lead  Leather, and manufactures of.  Metal, and manufactures of.  Printing machines  Rags  Steel, and manufactures of.  Tobacco	\$416 224, 224 1, 024 14, 436 2, 417 2, 600 1, 875 1, 792 2, 911

As this district is situated only a short distance from the large cities of Montreal and Quebec, a large proportion of the foreign goods consumed are purchased or entered at these ports, and the figures given above can represent but a very small portion of the consumption of American goods in this district.

By far the largest item is that of iron machinery, of which \$224,224 was imported. Most of this machinery was for the Laurentide Pulp Company, which is constructing an immense paper mill at Grand'Mère, thus paying a marked compliment to the excellence and labor-saving quality of American machines.

The following is a detailed comparison of the imports for the fiscal years ending June 30, 1897 and 1898, giving the country of import, and the tariff under which the same were imported:

		Fisca	d year end	ing June 80,	1897.	
Tariff.	United States.	Great Britain.	France.	Germany.	Holland.	Austria.
General tariff	\$41, 462 54, 691	\$13,446	\$3, 007 78	<b>\$</b> 721	\$7,696	\$1,016
Total	96, 153	13, 446	3, 085	721	7, 096	1,016

	Fiscal year ending June 30, 1898.						
Tariff.	United States.	Great Britain.	France.	Germany.	Holland.	Austria.	
General tariff	<b>\$302, 022</b>	\$10 2, 905	\$323 2, 023	\$682 4, 442	\$1,903	\$117	
Under French tariff	84, 378	54	91				
Total	386, 400	9, 976	2, 447	5, 124	1,903	117	

The above statement shows that notwithstanding the discrimination of 12½ per cent in favor of British goods, from August 1, 1897, to August 1, 1898, the exports from Great Britain to this district have diminished \$3,470. France, also enjoying a tariff preference, has not been more successful in increasing her exports. A considerable decrease in the exports of Holland and Austria is also noticed.

# EXPORTS.

Nearly everything exported from this district finds its market in the United States. Of the total exports for the fiscal year ending June 30, 1898, amounting to \$956,240.14, the United States consumed \$536,649.14, which compared with the exports to Great Britain and all other countries as follows:

Destination.	Year ending—			
Destination.	June 30, 1897.	June 30, 1898.		
United States. Great Britain All other countries	. 385, 711, 00	\$536, 649. 14 392, 911. 00 26, 680. 00		
Total	. 1, 015, 797. 64	956, 240. 14		

All the exports to Great Britain were lumber; \$175,476 was in spruce deals; \$151,946 in pine deals; \$47,862 in planks and boards, and \$17,627 in deals' ends. The following table shows the exports compared with those for the year ending June 30, 1897:

Articles.	Year ending—		
Articles.	June 30, 1897.	June 30, 1898.	
Deals' ends	\$11,870	\$17, 627	
Mineral water  Pine deals  The deals	97 227, 516 1, 480	151, 946	
Pig iron Planks and boards Spruce deals	144. 748	47, 862 175, 476	
Total	385, 711	392, 911	

The above shows that the export of lumber to Great Britain has increased but very little, and that, notwithstanding what has been claimed, the lower-grade lumber formerly exported to the United States has not yet found a market in that country.

The following statement shows the value of declared exports from this district (excluding agency) to the United States for the fiscal year

ending June 30, 1898, compared with the fiscal year ending June 30, 1897:

A = A4 -3	Fiscal yes	Increase (+)	
Articles.	June 30, 1897.	June 30, 1898.	decrease (—).
Bones		\$181,50	\$181.50+

Ore, bog		80.50	80.50+
Returned goods			375.00+
Telegraph posts		165.75	43. 25-
Tobacco		1, 097, 25	1, 097, 27+
Wood pulp		148, 098. 35	87, 065, 40-
Total	630, 086. 64	536, 649. 14	93, 437. 50-

There has been a decrease of \$93,437.50 in the total exports to the United States, principally in pulp wood, wood pulp, and lumber. The high duty has greatly affected the lumber industry of this district. The direct exports of lumber to the United States have mostly ceased, only \$58,886.12 being shipped this year, compared with \$225,052.56 last year, a decrease of \$166,166.44. The lumber sent to the United States is of the lower grade; the better being sent to the English market.

Owing to the great depth of snow last winter, the cut of logs was not as large as usual, which explains the decrease in the exportation of pulp wood.

The exports from the consular agency of Arthabaska have also decreased considerably, as is shown by the following statement:

Declared value of exports from the consular agency of Arthabaska to the United States during the fiscal year ended June 30, 1898, compared with the exports for the fiscal year ended June 30, 1897.

#### AGRICULTURE.

This consular district embraces within its limits some of the best farming lands in the province. The soil is rich and level, and capable

of producing all the cereals grown in temperate climates.

The farmers have been blessed with a very fine crop this year, but the prices have generally ruled quite low. Much hay was formerly exported to the United States, but its exportation has been completely stopped by the high duty imposed by the Dingley tariff. The agricultural interests of this district advocate any reasonable concessions to the United States, providing they bring about lower duties on agricultural products.

# TRANSPORTATION.

The transportation facilities to and from the principal points in this district are very good. The Canadian Pacific Railway, the Grand Trunk, and the Canadian Government Railway System, connecting with the United States railway system to all points, and the St. Lawrence River, with its many connecting canals, furnish speedy and cheap means of communication, which should greatly encourage trade between this district and the United States.

## PORT REGULATIONS.

The harbor of Three Rivers is very good, and is being improved every year. A very fine dock is now in process of construction, which promises to give much better accommodation to foreign shipping.

The tonnage, harbor, and wharfage dues levied on vessels in the harbor, and on goods imported to and shipped from the port of Three

Rivers, are as follows:

### TONNAGE DUES.

On all river steamers or towboats plying in or to the harbor of Three Rivers: When

above 20 tons register, \$1.50, and when under 20 tons register, \$1 per voyage.

On all schooners and barges of from 25 to 80 tons entering and using the harbor of Three Rivers: For the first trip in the season, 2 cents per ton register, and each succeeding trip during the season, half dues.

On all schooners and barges of from 80 to 200 tons entering and using the harbor: For the first trip in the season, 3 cents per ton register, and each succeeding trip

during the season, half dues.

On all gulf ports and ocean steamers using the harbor of Three Rivers to take in or to discharge part of a cargo: If that part cargo does not exceed 500 tons, 3 cents per ton on the cargo so taken in or discharged; if above 500 tons, for each day of twenty-four hours or part of a day the vessels remain in the harbor, reckoned from the hour of their arrival to that of their departure, Sunday excepted, three-fourths of a cent per ton register; on all other vessels, per day, as aforesaid, one-half of a cent.

# HARBOR DUES.

All goods, wares, and merchandise, including lumber and goods of every kind, imported or exported by sea to or from any place out of the Province of Quebec.

And all such goods, wares, and merchandise imported into or exported from the said port of Three Rivers to or from United States, or by transit from any other country through the United States, whether by sea or otherwise.

And all such goods, wares, and merchandise, including produce, live stock, etc., imported or shipped by river craft.

And all timber, logs, lumber, and wood goods sent to or directed to any place in or out of the Province of Quebee for transshipment or any other purpose, whether by rail or by water, shall, if entering or clearing at the custom-house of Three Rivers, pay to the collector of customs, and in any other case to the harbor commissioners, according to the rules of articles 13 and 52 of the by-laws, the following rates:

On all goods and merchandise not elsewhere specified, 1 cent per 100 pounds weight.

Digitized by GOOGIC

On mineral ores, coal, salt, cement, clay, sand, stones, gypsum, sulphur, pig and scrap iron, iron castings, chemicals, pulp, paper, grain of all kinds, flour, hay, raw hides, cheese, and butter, 5 cents per ton.

# Special.

On bricks, 5 cents per thousand; cord wood 2 cents and pulp wood 3 cents per cord; lumber and timber, 3 cents per thousand feet B. M.; laths, one-half cent per thousand; shingles, 2 cents per thousand; railroad sleepers, 15 cents per hundred; telegraph poles, 25 cents per hundred; tanning bark, 5 cents per hundred bundles.

#### WHARFAGE DUES.

To be levied on all merchandise, animals, and things whatsoever landed at or shipped from the commissioners' wharves, 10 cents per ton: All goods, wares, and merchandise not elsewhere specified. Ten cents per ton, harbor dues included: Mineral ores, coal, salt, cement, clay, sand, stones, gypsum, sulphur, phosphate, pig and scrap iron, iron casting, chemicals, pulp, paper, grain of all kinds, flour, hay, animals, raw hides, cheese, and butter.

# Special.

Lumber and timber, 10 cents per thousand feet B. M.; pulp wood, 7 cents per cord; firewood, 5 cents; tanning bark, 10 cents per hundred packets; telegraph poles, 50 cents per hundred; railroad sleepers, 25 cents per hundred; bricks, 10 cents per thousand; harbor dues also included.

On all goods, wares, and merchandise whatsoever, the quantity of which by weight, measurement, or other mode of estimate provided for in the tariff can not be conveniently ascertained, it shall be lawful for the commissioners to levy a rate of one-fourth of 1 per cent of the value thereof.

The ton mentioned in the tariff of wharfage dues shall be 2,000 pounds weight, or 40 cubic feet measurement, according to bill of lading.

### STANDARD FOR ESTIMATING WEIGHTS.

Ashes, pot or pearl	3 barrels to 1 ton
Apples, flour, meal, potatoes	9 barrels to 1 ton
Fish, meats, pitch, tar	7 barrels to 1 ton
Horses	2 to 1 ton
Neat cattle	3 to 1 ton
Sheep	15 to 1 ton
Swine	

Each entry shall pay not less than 5 cents.

Harbor dues and wharfage shall be charged at the above rates on all merchandise discharged into other vessels or landed on the wharves, whether in store or otherwise. Also on all goods shipped from off the wharves or out of the stores.

## COMMERCIAL LICENSES AND CREDITS.

There are no special taxes or licenses required of foreigners doing business in this district. Americans are at liberty to come and compete on the same conditions as the Canadians.

The business methods of this district require longer credits than are usually given in the United States. Ninety days, and in many instances as much as four and five months, are given by Canadian and British merchants, which is greatly to their advantage when competing with American goods. Longer credits should be given by American merchants wishing to do business in this district—the sooner the better.

# CURRENCY AND WAGES.

There has been no change lately in the currency value. The rate of exchange is about the same as last year—one-eighth of 1 per cent. United States money is taken at par, and there is considerable in circulation here.

 $\mathsf{Digitized}\,\mathsf{by}\,Google$ 

The wages paid in this district are quite low, and the supply of labor, with the exception of domestic servants, is greater than the demand. The rates are:

Class.		Wages.		
Common laborers	perday\$1.00	to \$1.25		
Lumber operatives	do90			
Mechanics	do 1. 25			
Factory operatives				
Masons	do 2.00			
Painters				
Clerks in stores				
Domestic servants				
Bookkeepers		to 1,000,00		

## UNITED STATES GOODS.

Our goods are, as a general rule, badly introduced in this district. Our manufacturers rely too exclusively on Uanadian wholesale houses to introduce their wares. These general agents usually represent many firms, many lines, and many countries. Their efforts are as divided as their lines are varied. They have a general interest in all the goods they handle, coupled with a natural penchant for Uanadian and British goods. This natural penchant and general interest often blocks the way of superior American goods. Our manufacturers should send special agents to study the wants of the Canadians and to push the sale of their wares. These agents would have a particular interest in their special line, and, providing they are endowed with "American push," could certainly double their sales in a few months.

URBAIN J. LEDOUX, Consul.

THREE RIVERS, October 24, 1898.

# SUPPLEMENTARY REPORT.

Under date of November 1, 1898, Consul Ledoux sends the following editorial from the Montreal Daily Star of October 29:

### THE PREFERENTIAL TARIFF.

During the year ending June 30, 1898, we had a tariff in force discriminating in favor of British goods, as well as most other goods made on this planet, but emphatically discriminating against American products. As most of our purchases come either from Britain or the United States, this was expected to increase our patronage of the exporters of the beloved mother country at the expense of the merchants and manufacturers of the American Republic.

During this important year, our imports from Great Britain did increase. They advanced from a little over \$29,300,000 in the previous year to more than \$32,300,000 last year. But it was hardly at the expense of the American exporter, for our purchases from the United States grew from \$61,500,000 in 1896-97 to \$78,100,000 in 1897-98. That is, our imports increased all around with a rush; but the British exporter secured very much less than his fair share of the increase, let alone getting more than an equal share of it, which was the avowed purpose of the Fielding tariff. The result was precisely what might have been looked for if the tariff had discriminated in favor of the United States and against Great Britain

This is the more remarkable in view of the fact that while our exports increased markedly to Great Britain and the world in general, they actually decreased to the United States. The Dingley bill was eminently successful in killing that portion of our trade which consists in the sale of Canadian produce to American buyers; and this must have had a depressing effect on the other section of our trade with the American people—i. e., our purchases from them. Still, these purchases increased over the preceding year by \$16,500,000, while at the same time, our purchases from that "most favored country," Britain, increased by only something like \$3,000,000.

# DECLARED EXPORTS, DOMINION OF CANADA.

Statement showing the value of exports declared for the United States at the several consular offices in the Dominion of Canada during the year ended June 30, 1898.

# MEXICO.

### MEXICO.1

Since my arrival here last year, I have endeavored to personally inform myself as to the resources of this Republic, and while it is not easy to obtain official information that will give all the data I desire up to the 30th of June, 1898, I have to acknowledge with appreciation a cordial disposition on the part of the departments to facilitate my work in every consistent way. In some cases, the special reports I herewith submit have been either prepared by the department interested and translated by my orders, or where I have prepared them they have been compiled from official data which is complete and accurate, and, when I have deemed proper, submitted to the competent authorities for their While desiring to give to this country proper credit and to elucidate the advantages of certain kinds possessed by Mexico, and by no other Latin-American Republic, I have endeavored to avoid exaggerations and have taken rather a conservative course, refusing to certify to the extraordinary profits which are estimated as realizable from investments here, especially in the tropical portion of this Republic, feeling that in this way I am serving the best interests of both countries.

It has seemed to me unjust, both to such of our own people as may be contemplating investments here and to the clean, energetic, and dignified administration of President Diaz and his cabinet, to make any assertions that I am not fully prepared to prove, and while I believe that there are great opportunities here, that the soil possesses enormous capabilities and great natural resources, yet I would suggest a careful personal verification of all statements made in newspapers or elsewhere regarding Mexico, and a study on the spot, before investments are made, of the conditions attendant on the exploitation and conduct of all agricultural enterprises, the price of the land offered, the price of labor and its abundance, the climate and hygiene, and transportation facilities of the locality. I would furthermore suggest that all persons that contemplate locating in Mexico acquire a knowledge of Spanish before coming; and if colonies are to be established, the agent of the prospective colonists be given sufficient time in which to study the advantages and disadvantages of a number of localities.

I give at the end of the report a summary of the colonization laws, which allow, under certain conditions, the free introduction of the effects of the colonists. Unless these conditions are strictly complied with, the colonists are likely to have trouble at the frontier and to begin their journey unpleasantly. There was a time when indiscriminate immigration was encouraged, but this is no longer the case; since, while President Diaz has adopted a broad, progressive policy, he will receive and welcome only desirable immigrants who have satisfied the

authorities as to their antecedents.

That the laws of Mexico protect the investor will be seen from the rights that the constitution of Mexico (art. 33) gives to foreigners. "Foreigners have in this Republic the same civil rights possessed by natives, except that the Government reserves the right to expel any foreigner regarded as dangerous or undesirable." As a matter of course, the Government rarely avails itself of its rights in this respect, and I know of but one instance—that of an anarchist—of an expulsion under

this article during my period of office. (See law on foreigners and their

naturalization, at end of report.)

For the acquisition of national or unlocated land, real estate, and vessels, foreigners are not obliged to reside in the Republic, but are merely subject to the Mexican laws. A principle of international reciprocity requires a Federal law to modify or restrict the civil rights of foreigners. Foreigners may take up their residence in the Republic and enjoy practically all the rights of Mexicans without losing their citizenship, and are exempt from military service. In the law of May 30, 1893, the Mexican Congress decreed that special privileges and rights should be conferred upon enterprises that should guarantee the investment of capital in any new industries in the Republic; among others, the exemption from direct Federal taxes for ten years of all such enterprises, and exemption at the time of the initiation of the establishment from all import duties, of any class whatsoever, on machinery, apparatus, tools, building materials, and everything necessary for factories and buildings. The Mexican Congress decreed on June 6,1887, a law by which coal mines, oil wells, iron mines, and quicksilver mines were exempted from all taxes except the stamp tax. This same law confers upon the President the power to make contracts and grant special privileges and franchises, and to make ample concessions to all enterprises that exploit mining industries; and also, in article 11, exempts from taxation for ten years all establishments for the manufacture of wines and silks and for fish-culture.

#### LAND LAW.

In the law of the 15th of December, 1883, Congress granted to the Executive power to occupy, and to denounce and alienate unlocated lands, and to make colonization contracts. In this decree, the right is granted to denounce or locate unlocated lands, with the provision for foreigners that they can not avail themselves of this general right in

the frontier States. (See law referred to annexed to report.)

Referring to the public lands law and its effects, I have to state that, owing to the former unsettled condition of the country, it has been difficult to establish boundaries; hence the department of encouragement, which is perfecting its land titles rapidly, is not desirous of inducing investments of capital without thorough investigation into the titles of the land. In my opinion, great care should be taken in the acquiring of public lands, and I would advise buyers to pay a little more, if it is possible to thus obtain an independent title. The laws of Mexico regard all children as coheirs, that have been recognized by the father, where no will is made. Many old deeds are unobtainable, and it is imperative that all titles be examined carefully, through a good attorney. I may say that the attorneys of Mexico are very skilled in their profession, and that an unqualifiedly favorable opinion from any of the reputable lawyers here is a practical safeguard against any subsequent attack upon the title to property. All opinions are given in detail, with the reasons therefor, and formed after a thorough study of the documents making up the title. It is customary, furthermore, to recite each former transfer in conveyances, so that any defect is generally known, and titles which are passed on as good are seldom disputed afterwards.

Life and property are as safe in Mexico as in any other country where similar conditions prevail. The laws are respected; and of the notarial system, where records are preserved for hundreds of years, I can not

speak too highly. A notary public has to pass through a regular course of study. Grave responsibility rests upon him, and for all errors he is personally liable. Where ignorance of law is apparent, he must so explain to persons appearing before him what they are about to do, that they evidence entire comprehension of and give intelligent consent to all acts of which he takes official cognizance.

#### MINES.

With regard to mines, the Government passed mining laws dated 4th of June, 1892, and 25th of June, 1892, in which valuable franchises are granted to the discoverers of (or those denouncing) mines or mining regions; they are given the ownership of the mines, subject to a slight

tax, and exemption from the principal taxes for ten years.

There is also a law of the 6th of June, 1894, in which the Government is empowered to grant special franchises, such as the right to condemn property for public uses, for the purpose of conveying water from distant points, the right of discovery or denunciation of waterfalls, either with the idea of using the power direct or for the transmission of the power only, or of the water itself, or for irrigation purposes.

The various mining laws are given below:

#### MINING LAW OF THE UNITED STATES OF MEXICO.

### SECTION I .- About mines and mining property.

ART. 1. Mining property in the United States of Mexico shall be governed by the following principles, to be regulated by the executive Government in accordance with its constitutional faculties.

ART. 2. Subject to the present law are those mineral substances which can not be worked unless previous concession be obtained, and those for whose extraction work is required which may put in danger the lives of the workmen, the safety of the works, or the stability of the surface.

works, or the stability of the surface.

ART. 3. The mineral substances, for working which a previous concession is required, are those which are hereafter enumerated, whatever be the nature, shape,

or situation of their respective ore bodies:

(a) Gold; platinum; silver; quicksilver; iron, except marsh ores; loose surface ores, and others which are worked as coloring matter; lead; copper; tin, except float tin; zinc; antimony; nickel; cobalt; manganese; bismuth, and arsenic; whether found in native state or mineralized.

(b) Precious stones, rock salt, and sulphur.

ART. 4. The owner of the ground can work freely, without necessity for a spe-

cial concession in any case whatever, the following mineral substances:

The mineral combustibles; oils and mineral waters; the rocks of the ground in general, whether they serve directly or form part of materials for construction or ornamentation; the matter which forms the ground, as earths, sands, and clays of all kinds; the mineral substances excepted from concession in Art. 3 of this law and generally, all those that are not mentioned in the same.

Superficial or subterraneous excavations, which the working of any of these substances may require, shall always be subject to the regulations which are decreed

for order and security in the mines.

ART. 5. Legally acquired mining property and that which in future will be acquired in accordance with this law, shall be irrevocable and perpetual as long as the federal property tax has been paid, in accordance with the regulations of the law by which said tax is established.

ART. 6. The newly acquired primordial mining title will be given by the depart-

ment of development according to the regulations of this law.

ART. 7. Mining property, except in the case of placers and superficial ore bodies, is understood to be only underground and does not include the surface, which continues under the dominion of its owner, except that part of the same which the miner has to occupy, in the cases and under the conditions mentioned in Art. 11 of this section.

ART. 8. The taking out of produce from a mine is completely limited by the respective boundaries, and these boundaries can only be passed in accordance with the

provisions of the regulations, when the ground is unoccupied and after previous request for the amplification of the concession.

In order to enter into another's field, the consent of the owner is absolutely neces-

sary, except in cases of legal right of way.

ART. 9. The water brought to the surface and coming from subterraneous workings of mines belongs to the owners of the same, and the regulations of the common law have to be observed in regard to the rights of owners of the ground through which these waters pass.

ART. 10. The work done for opening and utilizing mines and placers is for public benefit; therefore, in case of nonagreement, forcible expropriation can be proceeded

with for the ground necessary for this object.

ART. 11. The mining concessionist is free to make arrangements with the owners of the surface ground for the occupation of the surface he needs, in order either to work placers or superficial ore bodies or to establish buildings and other mining requirements, but in case both parties do not come to an agreement in regard to extent or price, the expropriation will be proceeded with through the local judge of first instance, the following proceedings being observed until Art. 27 of the constitu-

tion be regulated:

I. Each party shall name an appraising expert, and both experts shall present their valuation within eight days' time, counted from the day they received their appointment. If the appraisers do not agree, the judge will name a third expert as umpire, who shall give his decision within the peremptory time of eight days, counted from appointment. The judge, taking into account the opinions of the experts, and the proofs which both parties present to him whilst the experts are preparing their statements, shall fix the superficial extent and the amount of the indemnity within the next eight days following.

II. In case the owner of the ground which needs to be occupied does not name his appraising expert within eight days after being notified by the judge, this function-

ary shall officially name an appraiser to represent the interest of the owner.

III. In case it be uncertain or doubtful who is the possessor or owner of the property which has to be occupied, the judge shall decide as amount of indemnity the sum resulting from the appraisements of the expert named by the concessionaire and of the one which he himself appointed in representation of the legitimate owner, and shall make deposit of said amount in order that the same be delivered to the

corresponding party.

IV. The experts in making their appraisements shall base these on the value of the surface ground, the damage which immediately results to the property and the

rights of way which are to be established on the same.

ART. 12. Mining property and other ordinary property bounding on it shall, as the case may be, have the privilege of and be subject to legal right of way as regards free passage, conveyance of water, drainage, and ventilation, and the judges shall conform in their decrees regarding the same and the corresponding indemnities to the legislation of each State, federal district of territory, unless the same be modi-

fied by the following ruling:

I. The legal right of way of drainage consists, on the one hand, in the obligation which, according to Art. 21 of this law the owner of a mining field is under, to indemnify the owner of another field for the damage done to him by not keeping up the drainage of the subterraneous workings or not draining sufficient to keep the water from flowing from one to the other; on the other hand, in the obligation which all owners of mining fields are under to permit the passage through their ground of tunnels or adits whose exclusive and necessary object is the drainage of one or various workings.

II. The drainage tunnels, when not made on the strength of the contract authorized by Art. 23 of this law, can only be undertaken by the owner or owners of

mining fields to whom the tunnel is an absolute necessity.

III. In the case supposed by the foregoing clause, all the owners of mining fields which derive benefit from the drainage obtained through the tunnel, shall be obliged to pay their part of the indemnification, in proportion to the benefits received, taking into consideration the nature and the condition of the mine.

The driving of a tunnel shall not be commenced without previous permission given by the department of development, after hearing the opinion of the respective mining agent and after examination and approval of the drawings, in which the

direction and the section of the projected tunnel shall be detailed.

V. The paying ore found while driving the tunnel shall belong, in case it is encountered in lawfully conceded mining fields, to the owners of these, and if found in unoccupied ground it shall be divided amongst the owners of all the fields which are benefited by the tunnel, in the proportion established by the foregoing Clause III.

VI. If, when a tunnel is being driven and one or more veins are discovered in

unoccupied ground, a request be made for the grant of the respective fields or of the unoccupied surplus parts, then the orders of Articles 14 and 17 relative to this law

shall be applied, considering those who undertook to drive the tunnel as explorers, in accordance with the final part of Art. 13.

VII. Once the permission mentioned in the foregoing clause IV having been given by the department of development, only in virtue of a special contract can other persons but those who receive benefit from the tunnel be considered as members of

the undertaking.
VIII. Whilst the tunnel is being driven in his or their respective properties, the owners of mining fields which are crossed by the drainage tunnel can appoint a controller in their confidence, whose functions shall only extend to watching the work and giving notice to the mining agent or the judge, as the case may require, of any abuse he may observe.

IX. In places where the drainage tunnels, through whatever reason, communicate with mine workings, bars shall be put up which impede roadway or passage as soon

as the communication is made.

X. Only in virtue of a unanimous understanding, expressed in a public document, between the parties interested in a general drainage tunnel in accordance with the foregoing Clause III, can the tunnel be used for any other object but drainage. In this case, under penalty of nullity, all particulars regarding passage or transit indicated in the foregoing Clause IX shall be stated in the contract.

XI. The mines newly opened in places where they may be benefited by general

drainage tunnels already existing, will be subject to the provisions of Clauses III, VII, VIII, IX, and X.

XII. The legal right of way for ventilation consists in the obligation of every owner of mining fields to permit that owners of neighboring fields to communicate with his underground workings, so that the communication may produce, as a necessary result, the ventilation which could not be obtained in other ways except at

great expense.

XIII. Upless by special contract to the contrary, made in a public document by the owners of the properties giving and receiving the benefit, there shall always be placed a barred grating to impede transit or passage at the boundary line of the

respective properties.

XIV. When a communication, different from the one described in Clause XII, actually ventilates one or more workings, this service of producing ventilation shall not give a right to the miner who made the communication to exact indemnity from the owners of the other workings that have been ventilated, nor shall these on their side acquire a legal right of way which burdens the mining property which furnished the ventilation.

XV. If, while driving workings opened for the purposes mentioned in Clause XII, paying ore be found, the provisions applicable in the case of Clause V, VI, and

VIII shall be observed.

XVI. Also the provisions of Clause IV shall be observed as far as they suit the case. XVII. All the expenses occasioned by the workings which may have to be made in order to obtain ventilation and those for keeping them in future in good condition, shall be exclusively for account of the party who requested the establishment of the

right of way (of ventilation).

XVIII. For the establishment in future of a legal right of way to the benefit of one mining property and to the burden of another, there shall be necessary either the consent of the owner of the burdened property, stated in a public document or in a declaration signed and ratified before the judicial authorities, or an administra-

tive resolution agreed to by the interested parties, or a judicial decision.

XIX. The owner of mining fields who wishes to acquire a legal right of way, which does not receive the consent of the party who considers himself burdened by the same, shall apply to the department of development, which shall decide within the space of time and with the formalities established by the regulations, whatever it judges opportune, always hearing beforehand the dissenting party. In case either the latter or the petitioner does not agree to the administrative resolution, the right is reserved to them to apply to the respective local tribunals within the time specified by the regulations. The decision shall be communicated by the tribunal which gives the same to the department of development.

XX. In case the administrative decision be favorable to the petitioner and adverse to the opposing party, it can only be acted upon immediately by the petitioner giving bonds satisfactory to the department of development, for the indemnification of

any damages in case the opposing party receive judgment in his favor in the courts.

XXI. The ruling of the three preceding clauses is applicable to all cases in which that which is ordered in the other clauses may give rise to judicial contests.

#### SECTION II.—About explorations, mining fields, and mineral concessions.

ART. 13. Any inhabitant of the Republic can freely make, in government ground, exploration conducive to the discovery of mineral bodies, but if, instead of borings, excavations should be made, these shall not exceed ten meters in extent, either in Digitized by GOOSIC

length nor in depth. No license shall be necessary for this work, but previous notice shall be given to the respective authorities according to the provisions of the

regulations.

In ground of private property no mining explorations can be made without the permission of the owner or his representative. In case, however, that this permission can not be obtained, it can be requested from the respective administrative authorities, who shall give the same in accordance with the provisions of the regulations, bonds being previously given by the explorer for the damage which may be caused, after the authorities have heard the owner of the ground or his representative

Inside of private buildings or their belongings explorations can only be made with permission of the owner. No explorations shall be permitted inside the precincts of populated places, public works, public buildings or fortifications, or in their neighborhood. The regulations shall fix in all these cases the minimum distance within which said works of investigation can be allowed.

During three months' time, which can not be prolonged, counted from the date of the notice of the permission or of the administrative resolution mentioned in this

article, only the explorer shall have the right to receive mining fields.

ART. 14. The unit of concession or the mining field (pertenencia) in future shall be a solid block of unlimited depth, defined above ground by that part of the surface which in horizontal projection gives a square with sides 100 meters long and bounded under ground by the four vertical planes corresponding to the same.

This unit of mining field (pertenencia) is indivisible in all contracts concerning

mining concessions or ownership of the same.

ART. 15. Except as regards the final disposition of article 13 of this law, the concessions shall belong and shall always be given to the first applicant, and shall embrace, in all cases in which there is sufficient free ground, the number of mining fields which the interested party may ask for, but he shall clearly specify, in accordance with the dispositions of the regulations, the situation of the fields (pertenencias) which form his grant.

In case there remain between the mining fields granted and others already existing a space less than the unit of mining grants, this space shall be given to the first

petitioner.

#### SECTION III.—About the mode of acquiring mining concessions.

ART. 16. The department of state and of of development shall name in the States, Territories, and in the Federal district special agents in its service, before whom the applications for mining concessions shall be presented. These agents are authorized to collect fees according to the tariff to be fixed by the department mentioned.

ART. 17. The agents of the department of development shall receive the applications for mining concessions and shall note down immediately on the register the day and hour of presentation. They shall thereupon proceed with the publication of the application and the measurement of the fields (pertenencias) by the expert, or the man whom they shall appoint, and in case there be no opposition, they shall send a copy of the proceedings and of the map to the department of development for the corresponding approval and the extension of the titles.

The regulations shall fix the time within which these acts have to take place, and

shall detail the mode of procedure of the agents.

ART. 18. The approval of the proceedings being obtained and the title to the property having been given in favor of the concessionaire, the latter enters into pos-

session of the mining fields without further formality.

ART. 19. The agents of the department can not suspend the proceedings for any reason whatever, unless there be opposition. When once the time which is fixed by the regulations expires, they shall be obliged immediately to send the protocol of the proceedings, in whatever condition it may be, to the department of development, so that after examination it declare may the tardy applicant rejected, should the fault be his, or hold the agent responsible, if through him the case has been delayed.

The tardy applicant can not again petition for the same concession.

ART. 20. When opposition is made by the owner of the surface ground to the request for any mining concession or to the making of the respective measurements, and he claims that the ore deposit does not exist, and if there be found indication of a deposit on the surface, or any excavations or workings of exploration in the deposit itself, the agent of the department of development shall disregard the opposition. case that no indications of any ore body exist on the surface of the ground and there be no excavations or workings on the same, then a proceeding analogous to Section II of this law shall be followed, the proper judge deciding whether or not the concession shall be granted. His decision can be appealed from in both cases. The decree shall be communicated to the department of development.

ART. 21. The agents of the department of development shall suspend proceedings

in case there be opposition, and shall send the protocol to the judge of first instance of the proper place for the legal decision. Judicial authorities shall advise the department of development of their decision.

#### SECTION IV .- General provisions.

ART. 22. The working of mineral substances, whether they belong to those that are acquired through a concession according to this law or to those that belong to the owner of the surface, shall be subject to all the dispositions which the provisions of this law may dictate, in regard to police regulations and the security of the workings themselves, but if the owners conform to the regulations they will, on the other hand, have complete liberty of industrial action—to work in the way that suits them best, to hurry, delay, or suspend for more or less time their work; to employ the number of workmen they wish and wherever it suits them best, and finally to follow whatever system as regards workings, extraction, drainage, or ventilation, they consider most suitable to their own interests. The owners, however, remain responsi ble for the accidents which happen in the mines on account of their being worked badly, and for damages occasioned to other properties by reason of not taking out

water, or any other circumstance which may impair the interests of others.

ART. 23. When, in order to hurry the work in the mines of a locality, the necessity arises for making drainage tunnels, the execution of these works shall be a

matter of contract between the interested parties.

ART. 24. The partnerships or companies formed for working mines shall be governed by the disposition of the Commercial Code, except as regards associations

which are not admissible in mining affairs.

ART. 25. The contracts for furnishing money to the miner, known as "avio," shall in future have the character either of partnership, in which case the provision of the foregoing article shall be observed, or of mortgage. The mortgage in mining matters can be freely given in accordance with the regulations of the Civil Code of the Federal district, but the indivisability of the mining field (pertenencias), established in Article 14 of this law, shall be taken into account and the regulations of the Commercial Code as regards the register shall be observed, and for this purpose a special book of mining operations shall be opened. The holder of the mortgage shall always have the right to pay the tax mentioned in Article 5 of this 1 w, and shall through this payment acquire a right of preference over the owner of the

mine in regard to his own mortgage.

ART. 26. The mortgage may be divided into mortgage bonds to name or to bearer, either in the titles which constitute the debt or by a later document. In every case, it shall contain the dispositions organizing the representation of the holders of the bonds. These dispositions, and also those relating to the amount of the debt, to the conditions of the same and to the guarantee, shall appear in print on each of the

mortgage bonds.

The holders of the mortgage bonds can only take action against the debtor or the mortgaged property through their common representative, whose acts as regards

their rights shall be obligatory on all the holders.

ART. 27. The trials by court in mining matters shall take place and be decided in the Federal district and Territories and in each State, before the judges and tribunals which there are competent according to the regulations of the Commercial Code, and that which is prescribed in Chapter 9, Title 1, Book 4, of said Mercantile Code shall be observed, based on this, that the first expense of the administration indicated in the second clause of Article 1030 of the same code is the payment of the tax.

ART. 28. The new tax which shall be paid by all mining concessions, with the exception of those which are expressly exempt by contract, shall be a Federal tax

on the property, and shall be established by the respective special law.

As regards the other taxes on mining, the dispositions of the law of June 6, 1887, shall be observed.

ART. 29. Default of payment of the property tax, levied in accordance with the regulations and procedure of the law which establishes the same, shall constitute, from the date this present law goes into force, the only reason for forfeiture of mining property, which in this case remains free of all burden and shall be conceded to

the first applicant, in accordance with the provisions of this law and its regulations.

ART. 30. The industrial branch of mining shall belong to the department of state and of development, colonization, and industry, which therefore can dictate, in accordance with the regulations of this law, all the measures it judges necessary for the promotion of the prosperity of the mining industry; and which shall watch that the said law be enforced. It shall name the inspecting mining engineers it may think necessary, to visit the workings of mines or mineral substances, to study the same, to make investigations, and to fulfill in general whatever commissions the department may give them, in accordance with the details prescribed by the regulations.

ART. 31. The executive Government shall fix, according to the terms of Article 21 of the Federal constitution, the governmental punishments which those incur who infringe the dispositions of the regulations which it issues for the enactment of this law.

The official transgressions for which the agents of the department of development are responsible shall be judged by the judges of the corresponding district accord-

ing to the respective laws.

The ordinary transgressions committed in the mines remain subject to the corresponding territorial judges; this, however, shall not interfere with the governmental punishment, should the administrative Federal authorities impose same.

ART. 32. The establishment and working of mills and all kinds of metallurgical works shall be guided by the regulations of the common law, and as regards taxes by those of the law of June, 1887.

ART. 33. There remain exempt from taxes those parts of the tunnels situated outside of properties, when these are destined exclusively for the ventilating, draining, and extracting of minerals that do not proceed from the said tunnels.

# SECTION V .- Transitory provisions.

ART. 1. The denouncements of mines or surplus ground (demasías) which are in procedure when this law goes into force shall be continued and substantiated and shall be decided according to the provisions of the same.

ART. 2. The surplus ground or open spaces existing between neighboring mining properties and which have not been denounced when this law takes effect, shall cor-

respond and shall be given to the first party who applies for the same.

ART. 3. The contracts for the exploration and working of mining zones made with the department of state and expedition of development, colonization, and industry which are in force when this law takes effect and in virtue of which the concessionaires are complying with the respective stipulations, shall remain in force for the whole time of their duration, if the concessionaires so desire. The concessionaire can, however, within a year's time, counted from the date this law goes into force, choose the provisions of the new law, and as soon as he makes declaration to this effect before the department, he shall be relieved by the same from the obligations which said contracts imposed on him, and shall receive again the corresponding deposit. Remaining subject to this law and its regulations only, he shall acquire and conserve perpetually his mining concessions as long as payment is made of the Federal property tax.

ART. 4. Existing mining properties which are being worked or are held by special permit (amparo) when this law goes into force, notwithstanding that they are not in accordance with the same, shall remain in existence, and the mines shall be governed by the former measures, though these be different from those now established.

As regards the tax, however, the unit mentioned in Article 16 of this law shall

serve as a basis.

The owners, however, can ask for a rectification of the concession and for a new

property title.

ART. 5. The contracts for furnishing money to the miner ("avio") and all those relating to mining business which are in existence when this law takes effect, shall be governed by their respective stipulations, as regards points which may have been omitted by the mining law which was in force at the time these contracts were made; but it shall be indispensable to the validity of the future operations which have their origin in these contracts that these be registered, according to the dispositions of Articles 24 and 25 of this law, within a year's time, counted from the date

Therefore, whenever a mining business is transferred, under whatever pretext, to a third owner, the latter shall be responsible for the obligations resulting from said

contracts, supposing that any question in court should arise from the same.

ART. 6. The work which is being done in the mining field (pertenencia) of another owner in accordance with the law still in force can not be prosecuted after the date on which the present law takes effect, unless it have the consent of the owner of this field.

# FINAL PROVISIONS.

Only article. This law will go into force in the whole Republic on July 1, 1892; and from that date the mining code of November 22, 1884, and the circular orders and provisions relating to the same, shall be abolished.

Article 10 of the law of June 6, 1887, shall be abolished from the date of the pro-

mulgation of this law.

MEXICO, June 4, 1892.

DEPARTMENT OF THE TREASURY SECTION No. 8, DIVISION No. 2.

The President of the Republic has been pleased to send me the following decree:

Porfirio Diaz, constitutional President of the United States of Mexico, makes known to their inhabitants that the Congress of the Union has thought well to decree as follows:

The Congress of the United States of Mexico decrees:

ART. 1. In accordance with the provisions of the articles relating to the new mining law, there shall be established a Federal property tax, which shall consist of two parts—one part, which has to be paid once only in stamps, to be fixed to all titles of mining property; and another part, which has to be paid yearly for each one of the mining fields of which a grant is composed.

As regards the tax, the mining field ("pertenencia") or unit of concession shall be that established by Art. 14 of the new mining law. Consequently, all old and new mining fields existing in the Republic, whatever be their extent, shall be valued

according to this unit.

For the fractions of mining fields that amount to one-half or more, the tax shall be paid as if they were whole fields, and nothing shall be paid for the fraction that is

less than one-half.

ART. 2. Within the unprorogable space of time, counted from the promulgation of this law until the 31st of October of the present year, every owner or actual proprietor of mines, whatever title he may have, shall be obliged to present his documents to the office of the treasury which the regulations of this law may determine, so that the new stamps of ownership of the mines may be fixed to the title, and account may be taken for the payment of the annual contribution of the number of mining fields (pertenencias) which form the property, a corresponding register being opened for this purpose.

The titles which the department of promotion shall extend in future in accordance with the new mining law must carry the stamps corresponding to the same. These stamps shall be furnished by the party receiving the grant and shall be in proportion

to the mining fields (pertenencias) which the grant contains.

ART. 3. The property stamps of the mines shall be of the value of ten dollars and be affixed to the titles of the property, one for each mining field of ten thousand square meters, the rule established in Art. 1 to be followed as regards the fractions.

These stamps must be canceled by the office of the treasury authorized to receive the titles which were extended up to the 30th of June of the present year, the department of promotion canceling those belonging to the titles which are extended in accordance with the new mining law.

ART. 4. From the 1st of July of the present year, all owners or proprietors of mines

shall be obliged to pay the sum of ten dollars annually for each one of the fields

(pertenencias) of which their grants are composed.

The amount of the tax shall be the same whatever may be the nature of the substance which is being worked, on the understanding that the mine has been acquired through denouncement, or by special grant before the date on which the new mining law takes effect, and that in future it shall be acquired by grant and title, in accordance with the new law.

Only those mines shall be exempt from the payment of the annual contribution on mining fields, and of the stamps on the titles of the property, which have been expressly freed from the same by contracts, made with the Executive Government in virtue of the authority given by the legislature and approved by the same. The exemption shall only last for the time stipulated in the contract, without oppor-

tunity for prorogation.

ART. 5. The yearly property tax on mines shall be paid in three advance payments during each fiscal year, this payment to be made during the first month of each one-third part of the year, in the office of the treasury, which the regulations of this law shall determine and to which the taxpayers are obliged to go in order to make their payments, without further need of notification or any other excuse on which they might found delay.

ART. 6. Failure of presentation of the title which secures the possession of the mine, within the time fixed in Art. 2, shall be punished by a fine equal to the amount of the stamps which the title has to carry, if the same be presented within the two months following the expiration of the time allowed. For every additional two months that the presentation is delayed, the holder shall incur a fine equal to the

amount of the stamps.

The concealment of the number of mining fields shall be punished with a fine equal to double the amount of the stamps which the title ought to have had for the conceded mining fields (pertenencias), to which shall be added double the amount of the yearly tax for the whole of the time that the same has not been paid. This shall not interfere with the civil or criminal responsibility to which the concealer is iable and to which he shall be subjected in due time.

Failure to pay the annual property tax within the first month of each one-third part of the year, shall cause the owner to incur a fine amounting to fifty per cent of

the amount of the tax, in case he pay during the second month. If the payment be made in the third month, the fine shall be equal to the amount

of the tax. When once this last-named space of time has expired without the tax and the accumulated fines being paid, the mining property shall be lost to the owner without recourse whatever. The department of the treasury shall make the corresponding declaration and shall publish the same in the official paper, so that any

other party may petition for the property.

ART. 7. When the owner of the mine sells the same, he shall give the respective notice for annotation in the register, and the bill of sale which is given shall carry

the stamps which, according to the stamp tax, it should have.

ART. 8. In case it no longer suits any person or company to continue working the mine or mines which he or it may possess, the corresponding office of the treasury shall be advised in writing, so that the tax may be settled up to the date of the notification, and the corresponding annotation be made in the register.

MEXICO, June 6, 1892.

## MINING REGULATIONS.

The President of the Republic has been pleased to address me the following decree:

Porfirio Diaz, constitutional President of the United States of Mexico, to the inhabitants thereof, be it known: That by virtue of the constitutional faculty vested in the Executive, and in conformity with article 1 of the law of June 4 of the present year, I have seen fit to decree the following:

REGULATIONS FOR ADMINISTRATIVE PROCEEDINGS REGARDING MINING.

# CHAPTER I .- Of agents.

ART. 1. The special agents dependent on the department of public works and appointed by said department, wherever judged necessary according to article 16th of the law for any mining district, shall receive and transmit all petitions for mining concessions and extensions presented to them and shall exercise all the other functions marked out by the law and its regulations.

In the event of any doubt of the proper application of the law, the agents shall

consult the department of public works.

ART. 2. At the time of making the appointment, the jurisdiction of each agent shall be clearly defined, and the same, as well as any subsequent amendment thereof,

published in the Diario Oficial, the Government official organ.

ART. 3. The following requirements must be complied with in order to fill the position of agent of the department, viz: The applicant must be a Mexican citizen in the possession of his legal rights, and he must fill no other Government position in the State, Territory, or Federal District.

ART. 4. With each agent appointed at the several mining districts, a number of

substitutes shall be designated in proportion to the magnitude of business developed

in that district.

These substitutes must possess the same qualifications as the agents themselves, and will represent the latter during any temporary or permanent absence, as well as on all occasions where legal impediment may occur, the substitute being previously called upon by the respective agents.

ART. 5. Legal impediments to the action of agents shall be considered as set forth

in Sections I to IX and XII of article 1132 of the Commercial Code.

ART. 6. In case of death or serious illness preventing the agent from notifying his substitute, the latter shall enter into the former's functions without loss of time, giving the department due notice thereof through the mail, or by telegraph where such exists.

ART. 7. The mining agents shall give the public due notice as to their place of business and hours devoted thereto, which business shall not be interrupted except

on Sundays and national holidays.

ART. 8. The agents shall receive no other fees for their services than those set forth by the respective tariff, and in any case not specified therein they shall consult with the department as to the amount to be charged.

ART. 9. During the first ten days of each month, the agent must forward to the department of public works a detailed report of all petitions for mining concessions presented to him during the previous month.

# CHAPTER II .- Of explorations.

ART. 10. Each and every inhabitant of the Republic shall have the right to carry on mineral explorations on any section of national lands, due notice thereof being given the agent at the respective zone, as prescribed by law. The notification must be tendered in duplicate, specifying therein the limits of the zone to be explored.

The agent shall return the exploring party a copy of said notification, specifying thereon the date and hour it was presented and warning him that any digging should be done strictly in conformity with article 13 of the law and 14 of these regulations.

ART. 11. If the explorations are to be made on private property, the exploring party should first obtain due permission from the owner of the property, or his attorney, who, if authorizing it, will give the explorer a written statement specifying thereon the limits of the ground to be explored. This statement must be presented to the respective agent, who, after making the proper entry in the record, shall return it to the exploring party, naming the date and hour when presented.

ART. 12. If the owner of the property, or his representative, should fail to grant the permission called for, the exploring party should apply to the agent for same, stating at the same time his security therefor. This petition shall be presented by

stating at the same time his security therefor. This petition shall be presented by the agent to the owner of the property, who, failing to protest within a fortnight, shall be understood to grant his consent. At the expiration of the aforesaid fifteen days the agent shall adopt the proper proceedings, fixing at the same time the amount of security which must be given by the exploring party and a term of thirty days for presenting the same. The security once produced, the agent shall give the explorer a written acknowledgement, expressing thereon the limits of the section to be explored.

ART. 13. During a term of three months, not to be prorogued, from the date of the notification, permission, or administrative proceedings referred to in Articles 10, 11, and 12 of these regulations, the agent shall admit of no other petition for the site of explorations or the limits thereof than those proceeding from the exploring

party.

ART. 14. The exploring party or parties shall not carry on the work of exploration in the vicinity of towns or inhabited places, nearer than fifty meters from the exterior boundaries of public and private buildings and outhouses belonging thereto. The same distance shall be observed with regard to any public edifice or construction of any kind, but this shall be reduced to thirty meters from the lines bordering on highways, railroads, and canals. With regard to fortified places, no work of exploration shall be carried on within one kilometer, reckoned from the outer lines of same.

# CHAPTER III .- On concessions.

ART. 15. The petitions for concession of claims or extensions must be presented in duplicate to the respective agent. These petitions shall clearly express the number of claims wanted, their situation on the ground, and the relative position of said ground with regard to the corresponding municipality, fixing the most notable points of the locality for identification and specifying at the same time the mineral substance to be developed. Should the agent judge the petition as lacking clearness and accuracy on any point, he shall have the right to question the petitioner in order to obtain the same, all such information being affixed to the duplicate petition in the presence of said petitioner. Ignorance or inability on the part of the petitioner to afford the desired information shall be no obstacle in the way of registering the petition or sufficient cause for suspending the proceeding.

petition or sufficient cause for suspending the proceeding.

ART. 16. The agent shall admit no other petition for the same site until the department of public works has given its final decision on the provision for each petition.

ART. 17. On presentation of a petition to the agent, this functionary shall proceed to register the same in the presence of the petitioner, stating on the margin of both petition and duplicate thereof, as well as in the official register duly authorized by the department, the date, hour, and numerical order of presentation. The petitions must be registered strictly in the order of dates and hour of day presented, leaving no space in blank between the inscriptions.

ART. 18. In the event of two or more petitions for claims or extensions on the

same site being presented at the same time, the decision shall be cast by lots.

ART. 19. Within three days following the presentation of a petition for concession of mining claims, the agent shall appoint a titled expert, or, if such is not to be found, a practical surveyor, to take the measurements and draw the plans of the claims and extensions solicited, expressing clearly thereon the monuments marking said claims, as well as those of all other claims within an area of 100 meters all around. The agent may appoint the surveyor suggested by the petitioner, provided said surveyor meet all the requirements prescribed by law.

ART. 20. Within the next eight days following the appointment referred to in the foregoing article, the surveyor must communicate with the respective agent, stating whether he accepts the appointment or otherwise. If in the first case, he should also state that arrangements had been concluded between himself and the petitioner as to the amount of fees to be collected. The agent shall thereupon make the proper entry in the respective provision.

At the request of the petitioner the agent may extend, on one single occasion, the

aforesaid period of eight days to another eight.

ART. 21. On making the entry referred to in the foregoing article, the agent shall fix a period not exceeding sixty days for the presentation of drawings referred to in article 19, accompanied by an explanatory report by the surveyor; the agent shall then proceed to draw up an extract in duplicate containing the following data:

I. The petition, specifying in a clear and precise manner the name and dwelling of the petitioner, and the numerical order of the corresponding title.

II. The name, residence, and acceptance of the surveyor appointed.

III. Due notice that within a period not to exceed four months from the date of said extract, the title shall be finally substantiated at the respective agency.

A copy of the note shall be published in the bulletins fixed on the exterior of

each agency, the petitioner furnishing the revenue stamps necessary for said publication. The notice shall remain on the bulletin boards for a period of one month, due entry thereof being made in the corresponding title.

Another copy of the notice shall be handed the petitioner, who, at his own expense and risk, and within forty days after the date of said notice, shall have the same published three consecutive days in the official paper of the respective State, Territory, or Federal district, copies of which issues must be delivered at the agency by the petitioner, in order to have the same attached to the corresponding title.

ART. 22. The publication of the notice, as stated in the previous article, shall serve as summons to all such as may deem themselves justified in protesting against

the concession of the petition in question.

ART. 23. On making the entry referred to in Article 20, the agent shall hand the expert a certified copy of his appointment, which must close with the warning that whosoever may resist or oppose the execution of any work undertaken by the expert shall make himself liable to the penalties established in Article 904 of the Penal Code of the Federal district, or the law of the respective State.

ART. 24. Should the experts meet any opposition or positive resistance in the execution of the previous article, they may call the local authorities to their assistance.

ART. 25. The experts shall pay due attention to all remarks offered by the petitioner, as well as by those who have opposed or may oppose the petition; but they shall reserve their views on the subject for the written report referred to in Article 21, the presentation of which, within the period therein stipulated, shall be for the sole account and responsibility of said surveyor, as well as all damages that may spring from the nondelivery of said reports and maps.

ART. 26. Opposition to the concession of a petition for any of the following reasons shall only be admitted during the four months stipulated in Clause III of Article

21, viz:

I. By the dissent of the property owner.

II. By invasion or trespass on adjacent claims or extensions.

III. By prior rights or petition regarding the claims or extension.

ART. 27. On receipt of a protest to any petition, the agent shall notify the petitioner by means of a written notice placed on the bulletin boards during three consecutive days, expressing thereon the names of the claimant and opponent, respectively, as well as the numerical order of the corresponding title, wherein due entry shall be made of said publication.

ART. 28. Save in the event of the petitioner notifying the agent that he desists from his claim, the latter shall have the opponent's protest preserved on file until

the surveyor's report and plans are presented.

ART. 29. On presentation of these documents, the agent shall proceed to call a meeting of the parties to take place within the next fifteen days, publishing said summons on the agency bulletins during three consecutive days, and expressing the number of the provision, names of the parties, and date and time of day appointed for the meeting. At this meeting, it shall be the agent's mission to bring about a compromise between the dissenting parties, in order to avoid legal complications. Of all these particulars due entry shall be made in the respective provision.

ART. 30. If the opposition should spring from the land owner, and the expert's report should point to indications of mineral deposits on the surface, or any explorations in said deposits, the agent shall carry the administrative proceedings on the provision to a conclusion, so that the department may issue the proper title in favor of the petitioner, since this, according to articles 7 and 11 of the law, is either simply accountable for the underground operated upon, or otherwise leaves to the jurisdiction of the courts the extension and appraisements of the surface occupied by the miner. At the conclusion of these proceedings, which shall be duly placed on record, the agent shall notify the parties that they are at liberty to have recourse to

the usual tribunals, according to Article 20 of the law.

ART. 31. In any other of the cases of opposition enumerated in Article 26, should the agent be unsuccessful in bringing the parties to a compromise, he shall at once suspend all further proceedings and deliver the respective provision to the petitioner, who, on his own responsibility and within a reasonable term appointed by the

agency, must present it before the corresponding local judge of first instance.

ART. 32. If any reasonable opposition, based on causes not provided for in article
26, should be produced, the agent shall simply affix the same to the corresponding

provision, without suspending the proceedings on this account.

ART. 33. In the event of any opposition being made after the delivery of the surveyor's maps and report, but before the expiration of the four months stipulated in Clause III of Article 21, the proceedings referred to in Articles 29 to 32 shall be continued without interruption, this being the only instance (aside from the reference to the tribunals) where the agent may delay the substantiation of the provisions for thirty-five days after the said four months, provided the opposition be made within twenty days of the expiration of the above mentioned four months. twenty days of the expiration of the above-mentioned four months.

ART. 34. If the four months referred to in Article 26 should have transpired without any opposition being made, or in the event referred to in Articles 30 and 32, or should the provision be returned by the tribunals with a judgment in favor of the petitioner, the agent is strictly enjoined to forward to the department of public works, within the next fifteen days following and under registered cover, copies of the provision and maps, unless the petitioner should undertake to be the bearer of those documents, in which case the agency shall give due notice thereof to the

department.

ART. 35. The petitioner shall furnish the agency with the amount of revenue stamps required for issuing the title. These stamps shall accompany the copies of provision and maps forwarded to the department under registered cover, and will be returned, through the agent, to the petitioner, if the department should disapprove the provision and consequently refuse the title. If the petitioner should so desire he may

appoint the party who must deliver the stamps at the department.

ART. 36. Any omission or neglect in presenting the petitions, furnishing the stamps, or printed notices, payment of fees, or nonappearance at the meetings, and, in general, of any requirement mentioned in this chapter, imputable to the claimant or the opponent, respectively, shall imply, on the part of the former, the relinquishing of all claims and his petition, and on the latter that he desists from his opposition, and consequently acknowledges the legality of the petitioner's claims.

ART. 37. After due consideration and approval of the provision by the department, the proper title shall be issued and forwarded to the agent, who must deliver the same to the petitioner with a copy of the maps duly stamped by the department of public works, this department furnishing that of finance with a detailed report on

the concessions granted.

Should the provision meet the disapproval of the department, the agent shall be notified thereof in order that any errors or deficiencies may be rectified, within the term appointed by the department, provided said errors or deficiencies are not chargeable to the petitioner or the agent himself, in which case a different course shall be adopted, in accordance with Art. 19 of the law.

#### CHAPTER IV .- General laws.

ART. 38. The work to be performed on the ground by the expert, according to Art. 19, must conform with the scientific proceedings. The expert must determine the magnetic deviation of the compass, if this instrument is used to measure the direction of sides. The expert shall mark some of the vortices in the perimeter by means of permanent monuments on the ground, gathering all the necessary information besides, in order to verify said measurements when desired.

The expert shall designate upon the ground the spots where the monuments ought

to be constructed, as set forth in Article 41.

ART. 39. The maps of the respective claims must be neatly and accurately drawn

on strong paper for the better preservation of said documents. The copies thereof may be produced on tracing cloth. The maps must be made in decimal proportions.

ART. 40. The selection and survey of the claims upon the ground confer no rights to the occupation of same, but shall serve simply to show the limits embraced in the mining concession thus obtained. For the final acquisition of the surface required by the petitioner for the development of his mining concession, or that covering the total area of his claims, he must either arrange with the owner of the property by means of purchase, or otherwise present an action before the corresponding tribunal for the expropriation of said ground, as prescribed by Article 11 of the law.

ART. 41. The monuments to be fixed on the ground must meet the following requirements:

I. Their position must be permanent, as they are intended to make spots not to be changed as long as the concession for the claims undergoes no modification. Their

construction must be solid and they shall be kept in good repair.

II. A sufficient number of them shall be erected in the most convenient places, so that from any one monument the preceding as well as the following one may easily be seen. Care should be taken to distinguish the same in shape, color, or any other characteristic mark from those of adjacent claims.

ART. 42. The concesionaires of mining claims shall not overstep the limits marked in their respective concessions (as prescribed by Article 8 of the law), except in the event of waste lands existing near their property, due petition for the extension thereof being previously presented to the respective agent, who shall proceed in this case exactly in the same manner as prescribed in these regulations for the concession of mining claims. A like process shall be adopted in the substantiation of petitions for the ratification of claims.

ART. 43. The possession of a legal concession is indispensable for the development of all mineral substances enumerated in Article 3 of the law. Therefore, no manner of work tending to the development of mines or deposits of said substances, whether on the surface or under ground, shall be allowed without the same being protected

by means of a legal title thereto, duly registered.

ART. 44. All petitions of concession for the development of any substance not enumerated in Article 3 of this law shall be rejected, the development of said substance, according to Article 4 of the same law, being the exclusive right of the land

ART. 45. In compliance with Clause IV of Article 12 of the law, a petition for the corresponding license, accompanied by a horizontal projection and profile of the adits, reduced to a proportional decimal scale, and all other particulars that may be deemed pertinent thereto, shall be presented to the respective agent. Said agent shall forward to the department the corresponding petition and maps, together with his report on the subject.

The department, on receipt of these documents and all further information that

may be deemed necessary, shall proceed to render its decision.

ART. 46. The owner of mining claims who should be refused the consent of the party that ought to render the legal service, shall present to the department (in compliance with Clause XIX of Article 12 of the law) the corresponding protest in the form of a petition, embracing all the necessary information on the subject.

The department, in conformity with the agent's reports thereon and previous hearing granted the dissenting party or his attorney, shall render its decision within the period previously established for that purpose.

ART. 47. If the petitioner, or the party who ought to render the service referred to in Clause XIX of Art. 12 of the law, should deem the department's judgment unfavorable to his legal rights and interests, he shall be at liberty to appeal from this decision to that of the respective judge, provided said appeal be made within two months from the date of the administrative decision.

ART. 48. In places within the Republic not embraced in the jurisdiction of a mining agent, the petition for concessions, as well as the notices and concessions themselves, shall be presented to the postmaster of the locality, who shall file said documents, expressing thereon the date and time of day presented, and shall notify the department of public works through the mail, and by wire where such means are obtainable.

ART. 49. The postmaster shall receive and file the petitions for concessions, or the concessions themselves, only in such cases where his residence lies beyond the juris-

diction of any mining agent.

ART. 50. The department of public works shall publish in the Diario Oficial, the Federal official paper, every six months, the number of titles issued during that

ART. 51. The special book referred to in Article 25 of the law shall be kept by such parties as are designated in Article 18 of the Commercial Code in the manner prescribed for in said code, Chapter I, Title II, Book I.

ART. 52. It is the right of every individual to inscribe his titles for future con-

cessions or actual property in the Commercial Registers, as sanctioned by Art. 36 of

the Commercial Code, in cases where the proper register is not kept.

ART. 53. It is compulsory for all mining corporations, as well as for the creditors thereof, to register their transactions, as stipulated in Articles 25 of the law and 5

ART. 54. All mining corporations are obliged to register the location of their mining claims, as well as the residence or residences of the company, at the department or judicial district.

ÅRT. 55. If, through the extension of claims or other causes, any doubts should arise regarding the place where the registering should be effected in accordance with

the previous article, the department of public works shall render its decision thereon. communicating the same to that of finance.

# CHAPTER V.—By-laws.

ART. 1. The agents shall receive in the strictest numerical order, as per inventory thereof, all the provisions found in the present mining offices, on taking possession of them; and all provisious pending resolution shall be given due course, as prescribed in Art. 1, Title V, of the law.

ART. 2. All claims in the course of publication shall be placed on the bulletin

boards after the agent has duly complied with the prescription expressed in Article 21, said notice being again published in the official paper referred to in the last-

mentioned article.

ART. 3. When the provisions of denouncement have been duly advertised, though the appointment of the expert should be still pending, the agent shall proceed exactly as in the case of a new petition for concession, without making a new entry in the register.

ART. 4. With regard to provisions where the surveyor has been appointed but has not, as yet, presented the maps and report, the agent shall proceed in like manner

as in the case of new petitions, without making a new entry in the register.

ART. 5. With regard to provisions where the maps and report have been duly pre-

sented, the agent shall proceed to draw a note in duplicate containing the following: I. Copy of the petition, clearly expressing thereon the name and residence of the

petitioner and numerical order of the corresponding document.

II. The expert's report.

III. Notice that a term not to exceed two months from the date of said note will

be allowed for the substantiation of the provision of the agency.

ART. 6. In the event of provisions on denouncement where any opposition should have occurred before delivery of the maps and report, the agent shall proceed in accordance with Article 27 and, if required, as prescribed in Articles 28 to 32.

ART. 7. With regard to provisions where there may have been any opposition, the expert's maps and report being delivered, or where the opposition takes place within the two months stipulated in Article 5 of these by-laws, the proceedings shall be analogous to those in Articles 28 to 32, the agencies having the right to the thirtyfive days' extension granted in Article 33.

ART. 8. The same proceeding (as in Articles 27 to 32) shall be adopted with regard.

to provisions undergoing the twenty days' probation, expressed in Article 78 of the Mining Code of November 22, 1884. The agents in their administrative capacity can not render their decision in the same manner and spirit as the corresponding tribunal.

ART. 9. At the expiration of the two months referred to in Art. 5 of these by-laws, or in any event provided for in Art. 34, the agents shall proceed in conformity with

the prescriptions of said article.

ART. 10 For this one occasion, the three days stipulated in Art. 19 shall begin to count from the date that the agent shall announce that the office and business pertaining thereto are open to the public.

Therefore let this be printed, published, and circulated for the fulfillment thereof.

MEXICO, June 25, 1892.

# TARIFF FOR THE PAYMENT OF FEES TO THE MINING AGENT.

I. For the inscriptions in the notice, or in the concessions of explorations referred to in Arts. 10 and 11 of the "Regulations or legal proceedings regarding mining" and the corresponding entry in the records, one dollar.

II. For the proceedings on each concession of exploration referred to in Art. 12 of

said regulations and entry thereof, two dollars.

III. For registering each petition of mining concession, or extension thereof, or rectification of same, and entry in the records, one dollar.

IV. For the publication, memorials and notes on provisions, at the rate of twenty cents for each ten lines or fraction thereof, besides ten cents for the title page cover-

ing the documents to be paged.

V. For the transcription, checking, and legalization of testimonies, certificates, and other copies, at the rate of one dollar for each 100 lines or fraction thereof. For the search of a provision or any other document from the archives, one dollar. When the solicitor can not furnish sufficient data on the subject and documents of over a year's date must be searched, one dollar for every year thus reviewed.

VI. For the searching of expedients or any other kind of document from the

archives, one dollar.

VII. For every kilometer traversed in any direction, for the prosecution of any transaction in connection with his office, twenty-five cents.

VIII. For examinations of any kind, five dollars.

IX. For inspections, visits, or examinations of underground works, five dollars for every 100 meters in depth, or fraction thereof, and five dollars for the corresponding report.

X. For his appearance at meeting not exceeding an hour in duration, three dol-

lars, and one dollar more for every hour extra or fraction thereof.

MEXICO, June 25, 1892.

With the object of obviating any difficulties that might arise in different localities of the national territory in complying with the provisions of Articles 3 and 5 of the regulations of June 30 last of the mining tax law (Ley de Impuesto & la Mineria), owing to the distance at which mining properties may be situated from their respective federal tax offices (Jefaturas de Hacienda), and to the difficult means of communication, the President of the United Mexican States has seen fit to determine that in such instances the nearest fomento agent—subject to the fees which for the performance of this duty will be designated by the proper department, and which will be payable by the parties interested—is authorized to receive the manifestations prescribed in the above referred to Article 3, and copy of the original and last transfer title papers, which he will duly compare and legalize, together with the manifestation constituting the proceedings in the matter, which shall be forwarded, accompanied by the report which he must render, bearing on the accuracy and limits of the dependencies, to the proper Jefe de Hacienda, in order that the latter, after making the necessary entries, may, without further procedure, carry out the provisions of Article 4 of the regulations. The "fomento" agents will be careful to affix and cancel the stamps which the law prescribes on the original titles, retaining the latter in their possession until final determination is had, when they shall be returned to their owners with the respective number and date of entry in the register of federal mining taxes (Registro de Impuesto Federal a la Minería) noted thereon, and which will be duly transmitted by the proper Jefe de Hacienda.

MEXICO, August 15, 1892.

DEPARTMENT OF STATE AND TREASURY AND PUBLIC CREDIT, SECTION No. 8.

The President of the Republic has seen fit to approve the following

REGULATIONS OF THE MINING TAX LAW OF JUNE 6, 1892.

# TAX UPON MINING PROPERTIES.

ART. 1. The tax established by this law is applicable to the mining properties now existing or which may hereafter be authorized by the department of public works (secretaria de fomento) in conformity with Article 3 of the law of the 4th of the current month. The mining properties defined in Sections III and 1V of Article 1 of the Mining Code of November 22, 1884, are, in so far as refers to taxes. not subject to the present law, being liable only to that dated June 6, 1887, and such others as may be now in force.

ART. 2. The tax upon titles shall be paid by affixing to the last deed of transfer (traslativo) that may be presented by the interested party, the corresponding amount of document and book stamps (documentos y libros) in conformity with Article 3 of

the law, the same to be canceled as therein prescribed.

ART. 3. All owners and present holders of mines comprised in those referred to in Article 1 are obliged to present to the proper "Jefatura de Hacienda" in the States or to the "administraciones de rentas" in the Territories, within a term which shall not be extended, expiring on October 31 of the present year, and under penalty of the fines which may be applicable:

I. The original titles of possession, pursuant to Articles 4, section 6, of the ordinances of May 22, 1883, and 9 of the Mining Code of November 22, 1884.

II. The last deed transferring ownership, in the event of the present owner or pos-

sessor being the assignee of the original denouncer.

III. A declaration in duplicate, under oath of alleging the truth, which shall express in detail the name and place of residence of the owner or holder, and in such cases, that of the company and its manager or representative; the location and extension of the dependencies, and surplus grants in conformity with the latest measurements, expressing whether these are contiguous or interrupted; the amount of all dependencies and surplus grants taken possession of; the conversion of this amount into hectares, according to the terms of Article 14 and transitory Article 4 of the law of June 4th of the current year, and the reduction the petitioner may desire, if any, in conformity with Articles 4, transitory, of the law cited, and 8 of that of June 6th, 1892.

ART. 4. The presentation of the titles referred to in the foregoing article has for its sole object the identification of the mine and the verification of the exactness of the conversion of the dependencies into hectares.

ART. 5. The offices mentioned in Article 3 will return immediately to the interested party the duplicate of the declaration, after having noted thereon the date and hour at which the same was presented, affixing to the last title the proper stamps.

ART. 6. Within three days subsequent to that on which the "jefstura de hacienda" or "administración de rentas" may have affixed the stamps, the documents or proceedings (expediente) shall be forwarded to the treasury department (secretaría de hacienda) together with a report in which such office shall present and substantiate its opinion as regards the exactness of the declaration made by the person interested.

ART. 7. Upon the receipt of the documents or proceedings (expediente) by the treasury department (secretaria de hacienda) in the manner cited in the last preceding article, the latter will determine, after having procured such information thereon as it may deem essential, whether the declaration shall be accepted or rejected.

ART. 8. As provided in Article 6, should the department find the declaration to be exact, it will return the titles to the proper "jefstura de hacienda" or "administración de rentas," in order that either of the latter, as the case may be, may deliver the same to the interested person and certify upon the duplicate referred to in Article 5 the fact that the tax has been paid.

ART. 10. Within three days subsequent to the notification to the interested party, in the event provided for in the foregoing article, the latter shall manifest whether or not he agrees to the number of dependencies determined by the treasury department, it being understood that his acceptation thereof will be taken for granted should notice to the contrary not be received within the term indicated.

ART. 11. Should the party in interest not be satisfied with the number of dependencies (pertenencias) determined by the treasury department (secretaria de hacienda), the latter shall designate an expert, who, with the documentary proceedings (expediente) in his possession, will make an examination of the property and mineral possessions, presenting within the term of forty days a report thereon which shall be employed by the said department as a basis upon which to render a definite decision in the matter.

ART. 12. Basing the same upon the report made by the expert appointed, the treasury department (secretaria de hacienda) will render a definite decision in the premises, returning the proceedings to the proper "jefatura de hacienda" or "administración de rentas," where the stamps corresponding to the amount lacking will be duly affixed and a memorandum made of the duplicate declaration. In the event of cause existing therefor, the petitioner shall be bound over to the proper judicial authorities, in conformity with Paragraph II, Article 6, of the law of June 6th, 1892.

ART. 13. In any concession which may be hereafter authorized by the department of public works (secretaria de fomento), after having duly affixed to the titles the proper stamps, there shall be rendered to the treasury department (secretaria de hacienda) the information prescribed in Article 37 of the regulations of June 25, 1892.

ART. 14. The concessionaires of mineral zones not desiring to avail themselves of the privileges conceded to them by the second part of transitory Article 3 of the law of the 4th of the current month, are required to appear before the treasury department (secretaria de hacienda) with a declaration, in duplicate, conforming to the requirements of Article 3 of the present regulations, and in which they will also state the date of their respective concessions and whether or not they have incorporated within the limits of such zones mineral dependencies distinct from those conceded by their contracts.

conceded by their contracts.

ART. 15. The treasury department (secretaria de hacienda), in view of the declaration filed with it in conformity with the prescriptions of the preceding article, will request a report thereon from the department of public works (secretaria de fomento), rendering its decision in accordance with the information communicated by the latter department, and issuing to the party in interest a certificate in pursuance of the provisions of the final paragraph of Article 4 of the law dated the 6th instant.

ART. 16. For the same purpose, the concessionaires of zones who may hereafter incorporate within the limits of such zones, dependencies (pertenencias) foreign to those conceded by their contract, are required to present, within eight days subsequent to that on which they receive notice from the department of public works (secretarfa de fomento) that such incorporation has been accepted, a declaration in duplicate to the treasury department (secretarfa de hacienda), which latter department will issue the certificate provided for in the foregoing article.

## ANNUAL TAX.

ART. 17. The annual tax referred to in Article 4 of the law will be collected by the stamp office (renta del timbre) in accordance with the laws of March 31, 1887, and December 9, 1891, and such others bearing thereon, now in force, and is payable in

interior rent stamps (estampillas de la renta interior), the face thereof to bear a stamp, diagonally placed thereon, reading: "Mining tax" (impuesto minero).

ART. 18. The stamp officers (administradores principales de la renta del timbre) will receive, as sole fee, two per cent of the gross amount realized from the sale of

stamps for the payment of the annual mining tax.

ART. 19. The stamp offices (administradores principales de la renta del timbre) will keep a register of the mines situated in their respective districts, by aid of the data which the treasury department (secretaria de hacienda) will furnish for that

purpose.

ART. 20. The owners or holders of mines will make their payments in the principal or district subtax office (administración principal ó subalterna del timbre) corresponding to that in which such mines may be located; the treasury department (secretaria de hacienda), however, may modify this rule in instances where it may be deemed equitable and convenient to do so, in such case advising the general office (administración general), that the latter may transmit information thereof to the proper district branch of the principal tax office.

ART. 21. The principal stamp officers (administradores principales de la renta del timbre) will require the suboffices or agencies to forward them the stub of the stamp sold for each mine, affixed to pages on which they will state for which mines respectively the stamps have been sold, and whether the sale corresponds to the extension of the property detailed on the titles and indicated on the duplicate thereof returned

in accordance with Articles 8 and 12.

On the receipt of these pages or sheets by the principal stamp officers (administradores principales) they will notify the treasury department (secretaria de hacienda), to which they will also forward at the end of each fiscal year all such stamped

pages or sheets received, corresponding to each mining negotition.

ART. 22. Each one of the quarterly payments referred to in Article 5 of the law must be made previous to July 31st, November 30th, and March 31st of each year. For this purpose, the respective principal or substamp office (administración principal 6 subalterna del timbre) will deliver to interested parties a printed ticket or placard containing:

I. The title or heading: "Mining tax" (impuesto minero).

II. The name of the State and municipality to which the office issuing the ticket

or placard may correspond.

III. The name of the mine; number of dependencies (pertenencias) for which the tax is paid; municipality in which the same is located; name of owner of company which may be in possession thereof, and the registry number of the titles.

IV. The quarterly amount payable.

V. Three blank columns destined to receive the stamps corresponding to each

quarter, which stamps are to be duly cancelled.

The interested parties are required to place the ticket or placard referred to in this article in a visible part of the office of the negotiator or owner of the mining

properties, with the stamps accrediting the payment affixed thereto.

ART. 23. Upon any quarterly payment becoming due, as provided for in the foregoing article, and upon the stamp office (administración principal de la renta del timbre) being advised that such payment has not been made, it will communicate the fact to the fomento agent, in order that the latter may, during one month, fix a notice thereof on the bulletin board (tabla de avisos) mentioned in Article 21 of the regulations of June 25, 1892, which notice, as regards the creditors of the mines, will operate as a citation to avail themselves of the privileges indicated in Article 25 of the law of the 4th instant.

The payment of the tax by these creditors can not be effected until the notice referred to has been placed upon the bulletin board (tabla de avisos) of the depart-

ment of public works.

ART. 24. If within the district of any principal stamp office (administración principal del timbre) there should happen to be no fomento agency to which the notice mentioned in the preceding article can be given, the said administración principal will notify the creditors of the mines through the respective district court (juzgado del distrito), ascertaining previously in the proper commercial registry office (registro del comercio) the names of such creditors.

ART. 25. Upon the expiration of the terms referred to in the final part of Article 6 of the law, and the tax still remaining unpaid, the principal stamp offices (administraciones principales de le renta del timbre) will immediately advise the treasury department (secretaria de hacienda), in order that the latter may at once declare the loss of the property, and the department of public works (secretaria de fomento) dispose of the mine. This ruling will be published in the Diario Oficial (Official Daily).

ART. 26. The notice prescribed in Article 7 of the law will be made in writing, by the party in interest, to the principal stamp office (administración principal de la renta del timbre) through the proper local suboffice or agency. The principal

Digitized by GOOGIC

administration will advise the treasury department (secretaria de hacienda) thereof

for entry in the register.

ART. 27. The notifications referred to in Article 8 of the law will be made also as prescribed in the last preceding article. The principal administration will transmit the same to the treasury department (secretaria de hacienda) that the latter may make entry thereof in the register and order their publication in the Diario Oficial (Official Daily), and effect the necessary liquidation, which it will communicate to the proper principal administration that the latter may return, in such instances, the amount which may be due the petitioner.

ART. 28. The concessionaires of zones referred to in Articles 14 and 16 of this law

ART. 28. The concessionaires of zones referred to in Articles 14 and 16 of this law are required to communicate with the treasury department within the first ten days of the fiscal year, that the latter, while in possession of the documents mentioned in said articles, may issue the voucher exempting them from payment of the annual

mining tax (impuesto anual de minería) during the current fiscal year.

#### TRANSITORY PROVISION.

For the present year only, the payment of the quarterly amount maturing in July next will not be required in that month, but can be made on any day during the months of August, September, and October; or the two quarterly payments which will mature on the 30th of November next may be effected together previous to that date.

MEXICO. June 30th, 1892.

## CIRCULARS OF THE DEPARTMENT OF PUBLIC WORKS TO MINING AGENTS.

### [Circular No. 1.]

When the new mining law goes into force, this office reckons on your intelligence and progressive ideas, as well as on the simplicity and clearness of the principles of the law itself, in order that the application of the same and its respective regulation may not offer any practical difficulties.

Taking into consideration, however, that in the transitory period now entered upon some doubts and difficulties might arise, this office, in order to avoid them, deems it advisable to make certain observations to you relative to the prominent

points of said law and its first regulation.

As you will see from Article 3 of the new law, the detailed specification of articles that require a special concession to be worked is clear and decisive, and cannot for that reason give rise to any doubt as to the request for concessions that can legally be presented.

The new law grants complete liberty regarding the number of pertenencias that may be asked for, without taking into account whether there are one or various petitioners or whether they represent a company; the interested party may acquire

as many pertenencias as he may desire.

Although it has endeavored to make the steps which, according to the law, have to be taken in regard to prospecting easy, while also giving the prospector sufficient guarantee, I recommend that you on your side be especially careful, when exacting the guarantee to be given by the prospector, to take into account the true prejudice that may really be caused to the owner of the property, with the view of prudently estimating the amount of said guarantee so as not to make it excessive.

In the registration of requests for concessions, an effort has been made to give the petitioner every kind of security, with the object of avoiding the frequent complaints which, in this respect, occurred under the system of denouncement. When the requirements fixed by the law in this matter are complied with, sufficient publicity shall be given the request, thus relieving the agents of the responsibility held by the mining deputation owing to the manner in which the publications were made; and leaving it to the petitioner and such persons as may for any reason whatever be interested in the matter, to look after the part that may concern them.

As the indication and measurement of the pertenencias on the spot is of great importance, I recommend you to endeavour that the experts to whom you you entrust these operations fully understand their tasks and the responsibilities which they will incur through executing their work badly. This, according to Article 19 of the regulation, not only refers to regularly inscribed experts, but also to purely practical ones, and gave rise to the provisions of Articles 38 and 39 of the regulation, which are in accordance with the ruling law of land measurements of the 2nd of August, 1863.

As the law does not require the presence of the agent of public works or any other authority at the operation of indicating or measuring the pertenencias, the petition-

ers will now not be put to the expenses which the presence of said authorities formerly caused, without, however, depriving the operations of all their necessary legal force, in view of the fact that the operation is in reality reduced to technical work and does not involve the taking of property or discarding of rights, because these are safely guarded by the provisions of the law and the regulation. The expert bears, during his operations, the character of a legitimate trust from the public

authority, as per the provisions of the regulation.

It has been endeavored to make the steps necessary to put a request for a mining concession through as easy as possible, and also that they should materially differ from those that had to be taken according to the old law. It will be your duty to see that the steps are complied with within the time specified by the regulation, extraofficially inducing the petitioners to carry them through, without the latter, however, being obligatory on the part of the agent. I will also call your attention to the advisability of pointing out to the petitioners the facilities which the law offers to bona fide parties in acquiring a mine property, at the same time that it prevents the speculator from preventing the acquisition of the concession by other

In order to avoid any doubte or perplexity with regard to the petitioners, experts, or opposers, as well as any difficulties that may arise in the sending of the copies that have to be transmitted to this ministry, I request you to be exceedingly explicit, without being diffuse, in the wording of the extracts, records, and reasons that may be expressed in the documents, as well as to be very careful in their

arrangement.

It is advisable to inform you, in order that you may notify the petitioners for mining concessions, that they need not have an attorney or other representative in this capital for the purpose of receiving the title to their property; because, as soon as the documents have been approved and the corresponding stamps furnished, in the manner prescribed by the regulation, the title will be forwarded to the petitioner through the respective agent of public works, without any extra expense being incurred by the interested party.

In conformity with the basis which governs this law, and as the miner is not compelled to begin his development work within a stated time he is at liberty to

compelled to begin his development work within a stated time, he is at liberty to make arrangements with the owner of the land as to the time most suitable for such commencement, in order to give greater scope to his development work, thus avoiding the expense of taking possession, which is not obligatory by the law, it being sufficient in order to acquire the preference to have the documents approved under the actual state of the common legislation of the entire republic, and the corresponding title will be issued, which is amply sufficient to enforce all judicial rights. parties, as are desirous of being put in possession of what they have acquired with greater celerity, will in future have to apply to the judicial authorities for such

Taking into consideration that the law as well as the regulation only authorizes the agents in their dealings to exercise purely administrative and clearly defined functions, this office trusts that the work of the agents will be carried out more expeditiously than was the case with the mining deputations, and that thereby the

development of the mining industry will be greatly enhanced.

This office feels confident that your intelligence, your zeal for the public welfare, and your competency to discharge the duties with which you have been entrusted will prevent any difficulty in the application of the provisions of the regulation and will facilitate the acquisition of mining properties in conformity with the principles of the new law.

MEXICO, July 1st, 1892.

# [Circular No. 2.]

This office having consulted the treasury as to whether the mining agents appointed will require credentials for the despatch of their business, has received the follow-

ing decision:
"This office has received your attentive communication No. 194 of the 5th instant, in which you inquire whether the agents appointed by the office under your charge will, in virtue of the new mining law of June 4 last, require credentials for the

despatch of their business.

"In answer, I have the honor to inform you that in conformity with the previous resolution of the 25th of September, 1888, which was brought about by a similar case of officials or employees who merely received emoluments, it will be necessary to issue credentials to the mining agents in the States and Territories for the despatch

of their business, and to cancel a ten-dollar stamp on same."

Which I communicate to you for your information and consequent ends, with the understanding that a term of two months is granted you in which to provide your-

self with said document.

MEXICO, July 22, 1892.

## [Circular No. 3.]

Owing to the case having arisen where petitioners for a mining concession, after having presented the corresponding request manifesting the desire to increase the number of pertenencias asked for, and as the agent enquired from this office, whether they should be looked upon as having renounced the first petition and made to present a new one, the President of the Republic, to whom the matter was referred, decided as follows: That in case the declaration for an increase or reduction of pertenencias is made by the petitioner before the publication of the extract referred to in Article 21 of regulation for procedure in mining matters, it will be sufficient that such manifestation appears in the petition, in duplicate, and in the register book, the corresponding extract being published together with such modification, and without the necessity of making a new petition; but if the alteration is asked for after the publication of the extract, then the renouncement has to be carried out and a new petition presented.

MEXICO, August 1, 1892.

#### [Circular No. 4.1

The mining agent of this office, at Monterey, in a communication dated the 6th of July last, asked as to the steps he should take with regard to petitions for concessions already admitted and which the petitioners renounce. In reply, this office in a communication dated 30th of same month informed him as follows:

"As a decision of the reference made by you in communication dated the 16th instant, I have to inform you that the renouncement can be made before or after the publication in person or by writing; if it is before the publication and in person, it will be sufficient if this is noted on the documents, and the interested party should sign such entry, so that it can be archived with the respective documents; and if the renouncement is made by writing, it will be filed with the documents that are archived. In case the renouncement is made during the publication of the notices, the corresponding notice, that is being published, will be taken from the board and the steps indicated will be taken whether the renouncement is made in person or by writing. Lastly, I have to inform you that in the statements which the agencies have to make monthly, as to the petitions for concessions which have been made during the preceding month, these renouncements have to appear."

MEXICO, August 2, 1892.

## [Circular No. 5.]

It is of the greatest interest to this office to have exact information as to the movement in the mining business under the jurisdiction of your agency, because, in view of the number of petitions, as well as the quantity of pertenencias asked for, a clear idea can thus be formed of the importance of the various minerals of the country, and this office will then be able to judge as to the steps that should be taken in order to favor the development of the mining industry.

order to favor the development of the mining industry.

In order with the greater facility to be able to collect the information which, in conformity with article 9 of the ruling regulation, the agents have to remit to this office, statements or blank forms have been prepared, of which I send you the necessary copies, in which the subjects regarding which information is required are clearly stated, and I must request you to be most regular in sending in these forms when filled up, as well as to be exact in the information given in them.

filled up, as well as to be exact in the information given in them.

Said information should commence together with the data which belong to the present fiscal year, and be continued afterwards in conformity with the indication of the already referred to article 9 of the regulation.

MEXICO, August 1, 1892.

## [Circular No. 6.]

As it is of considerable interest to this office to know the prices and the consumption of articles employed in the mining industry, I send you some blank forms, which have been drawn up for this purpose, so that you can supply the data therein indicated, informing you that the data in regard to consumption should correspond with the total consumed in all the mining camps within the jurisdiction of your agency.

I caution you to use the greatest exactitude and regularity in the preparing and monthly sending of these forms, starting with those corresponding to the present fiscal year, and that the data dealt with be made out according to the decimal system of weights and measures.

Maisure and measures.

MEXICO, August 9, 1892.

## [Circular No. 7.]

In view of an inquiry made to this office by one of its mining agents as to the application of the stamp law with regard to the registry books that have to be kept in the agencies, said inquiry was referred to the department of the treasury, who

resolved as follows:

"Paragraph 52, annex L1 of Article 6 of the law, does not state that the books and indexes of mining deputations have to be habilitated (stamped), but on the contrary exempts them from the impost, and consequently from the authorization (of the stamp office), and although the registry to be kept by the agents of the department of fomento and to which the present enquiry refers is of public interest, because its entries give and define rights, still, as the agencies are considered as federal offices, the books to be kept by them are looked upon as similar to those in the other offices and only require an official authorization—i. e., that of the department of fomento—in accordance with Article 17 of the regulation for administrative procedure in mining matters, dated the 25th of July last."

MEXICO, August 10, 1892.

[Circular No. 8.]

In order to facilitate the carrying out of the decision in the circular of this office, date 22d of July last, with regard to the credentials to be issued to the mining agents of this ministry, you should deposit with the post-office of your locality the sum of thirteen dollars and twenty cents, which is the amount of the stamp, requisition, and copies of said credentials, advising this office when the deposit is made.

If, on receipt of the present circular, you should already have sent to this office the required \$10 stamp, you will then merely deposit with the post-office referred to the remaining \$2.20 for the expenses incurred for the requisition and copies of the credentials mentioned, which will be forwarded to you in due course, as soon as you comply with the prescriptions of the present circular.

MEXICO, August 29, 1892.

[Circular No. 9.]

Under date of the 15th instant, the treasury department notifies this office as follows:

"In view of the reasons set forth by the miners of Tasco de Alarcon in a petition made to this office under date of the 22d of July last, they, as well as the chiefs of hacienda, administrators of the stamp office, and other corresponding offices, have in answer, by means of a circular, been notified of the following resolution:

"In order to obviate the difficulties that may arise in various parts of the national territory in carrying out the prescriptions of articles 3 and 5 of the regulations of the 30th of June last, of the law of imposts on mining, owing to the distance of some mining camps from the respective haciends office, the President of the United Mexican States has deigned to decide, that, in such cases, the nearest agent of fomento shall, by means of the payment of the fees which for this transaction are fixed by the corresponding office and which have to be collected from the interested parties, be authorized to receive the manifestation prescribed by said article 3, and a copy of the original titles, as well as the latter ones referring thereto. This copy will be examined and legalized and together with the manifestation will form the documents which the agent, jointly with the report to be made as to the exactness and reduction of the pertenencias, will send to the corresponding hacienda office, so that the latter, without any further operations than that of taking note, can take the course laid down in article 5 of the regulation; the agents of fomento will, however, be careful to affix and cancel the legal stamps on the original titles, retaining them in their possession until final decision is given, in order to return them to the owners, after indicating on them the order, number, and date of the annotation and the registration of the federal mining impost that may have been fixed upon them, by the respective treasury office.

"Which is notified you for the requirements necessary.

"I have the honor to advise you of it in order that you may notify the agents under your jurisdiction and indicate to them the fees which they ought to collect and the steps they have to follow in the operations recommended to their care."

Which I communicate to you for your information, notifying you that over and above the fees for examination and authorization of titles, fixed by the tariff of the regulation, you should collect the sum of \$2 for revising the reductions of the old pertenencias to the new, in conformity with the law, and for the corresponding report, to be made by the respective treasury office.

In case any error or discrepancy in the conversion of the pertenencias should occur in this revision, you should call the attention of the interested parties to it, so that they can make the due rectification and amend their manifestations; and if they do

not agree to this, you should make a note of it in the report.

MEXICO, August 30, 1892.

## [Circular No. 10.]

As one of the mining agents has consulted this office with respect to the fees that should be collected for the certified copies of plans which they have to issue, it has been decided that, whereas, in accordance with article 21 of the regulations of administrative procedure, the experts are the persons who should present the plan in triplicate, with the object that one copy be filed with the documents and the other two copies, together with the one attached to the documents, be sent to this office, examined and authorized by the agent with the corresponding stamps, which have to be provided by the interested party. The agent may collect as a fee for the examination and authorization referred to, the amount of \$1.

In case the interested parties desire to have a copy of the plans filed in the

archives of the agencies, it can be granted them or the persons designated for such purpose to make said copies within the premises of the agency, the agent collecting

for the examination and authorization the same fee of \$1.

#### [Circular No. 11.]

In view of the inquiries recently made by some mining agents, asking for instructions with respect to the steps they should take in such cases where, in virtue of the provisions of the mining law of the 4th of June, 1892, petitions are presented to them for amplifying, rectifying, or reducing mining properties, the President of the Republic, to whom I communicated these inquiries, has deigned to issue the fol-

lowing resolutions:

"When the amplification of the number of pertenencias of a mining concession is

"When the amplification of the number of pertenencias of a mining concession is desired, the petition should be made solely in regard to the new pertenencias that it is wished to acquire in the same manner as if a new concession were asked for, it being necessary to issue the corresponding title to the new portion of property asked for. The plan made by the expert should be for the new portion of property, duly connecting it with the old one, and the landmarks should be placed on the division lines of the new property, in conformity with the provisions of the respective regulation.

"In the case of rectification, when it is merely a question of verifying the measurements of the pertenencias on the land, in order to make them agree exactly with the title to the property, then the steps to be taken will be the same as for a new concession, and the landmarks should be placed in conformity with the regulation; but as it is not necessary to issue a new title, the matter will be settled by the agent handing to the interested party a certified copy of the steps taken, which the latter will attach to his title of the property. But, if on asking for a rectification, it is desired to correct the errors that may exist in the title to the property, then the issuing of a new title, in conformity with the law, will be proceeded with, and consequently all the steps necessary for a new concession will previously have to be taken.

"When a reduction of pertenencias is asked for, which have been acquired in accordance with the new law, this does not necessitate the issue of a new title to the property, and the agent, before whom the petition, together with the respective title, is presented, will name an expert who, at the expense of the interested party and within the time which the agency may deem necessary, will make a plan of the reduced property and place the necessary landmarks in conformity with the regula-

"The agent will make a note of the reduction asked for and effected in the registry of petitions for concessions of the agency, as well as on the title to the property, which he will deliver to the interested party, together with a certified copy of the steps taken, and the matter will be determinated by a notification of the reduction made being at once sent to the respective stamp office."

In case it is a question of the reduction of pertenencias acquired prior to the law of the 4th of June, 1892, similar steps will be taken, the agent furthermore being guided, when necessary, by the provisions of Circular No. 9 from this office of August 30.

The agent should give the corresponding particulars of all cases that occur, in the monthly report which he has to send to this office.

MEXICO, September 3, 1892.

## [Circular No. 12.]

This office, under date of July 30 last, addressed the following communication to the foreign office:

The new mining law of June 4 this year does not in any of its articles put any restrictions against foreigners acquiring mining properties in the Republic. Not-withstanding this, the law of February 1, 1856, as to the acquirement of properties by foreigners, is still in force, as well as the one of May 28, 1886, regarding foreigners and naturalization, in accordance with which this office has been granting the permits to acquire real estate, including mining properties as it is thus prescribed regarding them in article 6 of the mining code, which has ceased to be in force.

In view of this, I shall feel obliged if you will advise this office whether foreigners, who wish to acquire mines within the frontier zones of 20 leagues are obliged to solicit the corresponding permit, according to the terms prescribed by the law of

February 1, 1856.

In case you are of this opinion, this office takes the liberty of pointing out to you the advantage of fixing the steps for the solicitation of the permit within the time specified by the mining law in force for obtaining the title to a mine, because, as said time can not be extended, it might occur that the foreigner may not succeed in obtaining the concession, and will thus lose the right to the pertenencias he solicited, owing to his not having obtained the permit to acquire the property within the proper time.

In order to avoid these difficulties, should your office approve of it, it might be decided that, when a foreigner presents his petition for a mining concession, he should, more or less at the same time, send in his petition for a permit to this office through the respective governor, so that, when the time comes for issuing the title to the property, the corresponding permit will then have been granted or refused.

To this communication the foreign office replied as follows:

"Mexico, August 13, 1892.—I take note of what you are good enough to communicate to me in your dispatch relative to permits solicited by foreigners, who wish to

acquire mines within the frontier zones of 20 leagues.

"In answer I have the honor to inform you that foreigners have still to ask for permits according to the foreigners' law, because this, being of a special nature, can not be looked upon as abolished by the new mining law, which is of a general character and does not contain any proviso that can be considered as expressly abolishing this requirement; but this office finds no objection to the practice proposed by the office under your charge, on the contrary considers it useful, in order to avoid the delays and difficulties indicated."

MEXICO, September 5, 1892.

## [Circular No. 13.]

Inquiries having been made by various mining agents as to whether petitions for concession can be admitted when presented by persons in charge of mining companies holding merely a letter of authority, this office, taking into account that it is a question of executing a mandate, which it is necessary should be authorized by a power of attorney in due form, considers that the presentation of the latter must always be insisted upon. But in order to facilitate the interested parties in complying with said requirement, and in order that they should not lose the opportunity to present their petition for a concession in due time, those made in the name of other persons may be admitted when the person presenting same gives a guaranty and undertakes to produce a legal power in due form at the latest within sixty days, which according to article 21 of the regulation of the mining law is the time fixed for the expert wherein to present the plan and respective report. The undertaking must be duly entered in the documents, as well as the note that if such time should elapse without the power being presented, it will be to the detriment of the interested party.

MEXICO, October 15, 1892.

## [Circular No. 14.]

As the general management of the stamp office have issued a circular relative to the stamps necessary for mining exploration permits, given by the owners of lands in order to make explorations according to article 13 of the mining law, as well as concerning the notices when reference is made to national lands, this office, in view of the fact that said permits and notices do not form part of the documents nor are registered in the books wherein requests for concessions are entered at the agencies, begs the treasury to be good enough to explain the nature of the order given to the stamp managers, furthermore taking into account the before-mentioned reasons laid before it for consideration relative to the advisability of facilitating mining explorations, in order to further the development of this important branch of the public wealth.

As a result of said considerations, the department of the treasury has issued the following resolution to the general manager of the stamp office and transmitted it to this office:

"The President of the United States of Mexico has deigned to decide that the nature of the order given by this office, under date of August 15 last, relative to the use of stamps on permits granted for making explorations in search of mines, shall be understood as follows:

"When these permits are given unconditionally by private parties, with regard to lands of their own property, they are not subject to a stamp tax; but when they contain stipulations of any nature whatsoever they will be considered as contracts, and must bear a 50-cent stamp on each sheet, according to Annex A, paragraph 29, article 6 of the law of March 31, 1887. Digitized by GOOGIC

"The President has likewise been pleased to decide that the notices which according to article 13 of the mining law have to be given to the authorities through whom mining explorations are made on national lands, are not subject to the respective impost."

MEXICO, October 17, 1892.

[Circular No. 15.]

This office having consulted the treasury as to whether the explanatory notes which the experts have to send in with the plans, as well as the copies of the documents which the agents remit to this office, should be stamped, the treasury department has in answer forwarded to this office the following report drawn up by the general management of the stamp office:

"The accountant's office of this management, to whom I referred for examination your communication No. 1679 of September 10 last, has given the following decision:

your communication No. 1679 of September 10 last, has given the following decision: "'Information is asked as to whether stamps should be affixed to the explanatory notes which the experts have to send in with the plan, according to article 21 of the mining law, and whether they have to be used, and of what value, on the copies of the documents which the agents draw up and which will begin to be received shortly.

"'The accountant's office, similarly to the department of fomento, is of the opinion that the explanatory notes of the plans do not require stamps, in view of the fact that they are not needed on the plans themselves, according to Part II of paragraph 41, article 6 of the law; neither should stamps be used on the copies of documents, inasmuch as on drawing up these documents they have to bear the stamps prescribed in Part I of the same paragraph, as well as because these copies are and must be looked upon as office vouchers."

"Such is the opinion of the accountant's office, but the general manager will be

pleased to decide what he may deem expedient.

"And I have the honor to transmit it to you in regard to the aforementioned report, advising you at the same time that this general management entirely agrees with the opinion given in the above decision, but your department will decide upon what, under the circumstances, it may deem most expedient.

under the circumstances, it may deem most expedient.
"The President of the Republic having given a similar opinion, I have the honor

to transmit it to you in answer to your communication."

MEXICO, October 19, 1892.

[Circular No. 16.]

As the case has appeared that some of the owners of mines are not in possession of the respective original titles, owing to their having been mislaid, nor are they to be found in the archives received by the mining agencies from the exterior deputations, the President of the Republic, in order to avoid the detriments that might arise to the owners from not presenting said titles within the time specified by the treasury law as to mining imposts in article 2 and in article 3 of the regulation, has decided that reference be made to Congress who issued the law which was approved on the 31st ultimo. Mining owners finding themselves in the circumstances mentioned should petition the respective mining agency for the ratification of the mining concession which they may have or wish to preserve, and said petition should go through the same course as if it referred to a new concession on public lands, without any other modification than that of making a note in the petition to the effect that it is desired to remedy the want of a title to the mining concession which the owner had acquired prior to the new law.

MEXICO, November 11, 1892.

[Circular No. 17.]

This office having consulted with the treasury as to stamps on the copies of

nominations of experts, the latter office has replied as follows:

"In answer to communication of the 5th instant from your office, stating that various mining agents had consulted you as to whether the copies of the nominations given to experts in accordance with article 23 of the regulation of the mining law should bear stamps, and in the affirmative of what denomination, I have the honor to inform you that in the case referred to, such copies should bear a 10-cent stamp, in accordance with Annex A, Paragraph XXXI, article 6 of the stamp law in force, which expressly refers to titles and nominations, and none of the other annexes referred to in said communication can be applied in this case."

MEXICO, November 12, 1892.

[Circular No. 18.]

Under date of the 2d instant, the treasury advises this office as follows:

"In answer to a telegraphic inquiry from the chief of the treasury in the State of Zacatecas as to whether the manifestations soliciting reductions of pertenencias

presented to the mining agent should be stamped, this department has to-day replied by wire:

Requests for reduction of mining pertenencias are subject to stamp of 50 cents per sheet."

Which I communicate to you for your information.

MEXICO, November 13, 1892.

[Circular No. 19.]

In order to aid the miners in furnishing the stamps that have to be affixed to their titles to mining properties, in accordance with article 1 of the law of imposts on mining of the 6th of June of the current year, this office addressed the department of communications, requesting it to issue orders to the local post-office to receive the amounts that interested parties may hand in for such purpose. In answer, the department of communications has replied as follows:

"Orders have already been given to the general post-office to instruct the local offices in the interior to receive the amounts that miners may hand in for stamps on their titles to preparty."

their titles to property."

I have the honor to inform you of it, in answer to your dispatch of the 20th of October last.

MEXICO, November 14, 1892.

[Circular No. 20.]

The mining agent at Zimapan, State of Hidalgo, has addressed the following

inquiry to this office:

"Some miners in this district, complying with the prescriptions of article 3 of the regulations of the law of imposts on mining, and circular No. 9 of the 30th of August last, have presented their original mining titles for revision to this agency. Several of them have supplied the necessary stamps to legalize their titles, but the greater number of the miners decline to supply the stamps and even demand the return of the titles, stating that the legislative chambers have voted a law proroguing the presentation of such titles until the 30th of June, 1893. In view of the foregoing, I request you to advise me whether I am to return the titles, and other documents presented, to the interested parties, or whether I am to exact the corresponding stamps, in view of the fact that the aforesaid documents have already been filed and revised in this agency."

The foregoing inquiry was referred to the treasury, who gave the following

decision:

"This office has taken due note of your dispatch No. 3681, 3d section, of the 7th instant, in which you inclose the inquiry received from Mr. Jesus Cervantes, acting mining agent at Zimapan, Hidalgo, and in answer I have the honor to inform you that the extension of time granted by the law of the 31st of October last for the presentation and registration of mining titles is only applicable to cases where mine owners were undoubtedly unable to make the presentation earlier; and for this reason, the mining agent at Zimapan should proceed in accordance with the steps laid down in the law of the 6th of June last and its regulation, as well as in the circular of the 1st instant."

MEXICO, November 15, 1892.

[Circular No. 21.]

In order to prevent the absence from the mining agencies of the officials under whose charge they are, and as it happened that some of the agents have absented themselves temporarily without giving the corresponding advice to this office, it is decided that in future, when agents have to absent themselves for more than eight days, they may do so by previously calling in the respective acting agent and giving due advice to this office. Should a longer absence be necessary, they will first have to solicit the permission of this office, indicating the reason for such absence and the time needed, so that a corresponding decision may be taken.

MEXICO, November 20, 1892.

|Circular No. 22.]

This office having inquired from the treasury as to whether the acting mining agents are obliged to provide themselves with the corresponding credentials, said

department answered as follows:

"As a result of your inquiry made to this department in communication of the 29th of October last, as to whether acting mining agents are obliged to provide themselves with credentials, notwithstanding the fact that they officiate and receive salary only when the incumbents are accidently prevented through illness or leave of absence, I beg to inform you that said agents are not obliged to provide themselves with credentials, in view of the circumstance that the salary they draw is accidental and the time during which they officiate is very short, not exceeding two months."

MEXICO, November 28, 1892.

## [Circular No. 23.]

As it is necessary that this office should have exact information as to the petitions for reduction or rectification of pertenencias that have been or may be presented to you, you should give details of each petition when the respective steps are terminated, explaining in said details as to which case provided for in circular No. 11, of the 3d of September last, issued from this office, the petition in question refers to, and also as to what steps may have been taken up to the time of sending in the report.

MEXICO, January 10, 1893.

[Circular No. 24.]

Owing to its having happened that the office has been obliged to issue mining titles which, besides several complete hectares, contain fractional hectares not reaching one-half, and in some cases titles for fractions of less than half a hectare, this same office, taking into consideration that article 1 of the law of July 6, 1892, exempts such fractions from the payment of the annual impost, consulted the department of the treasury as to whether this exemption likewise has reference to the

stamps that have to be affixed to mining properties.

The decision which said department of the treasury has given to this inquiry, is to the effect that fractions of less than half a hectare should be considered exempted from the tax imposed on complete pertenencies; but in order to legalize titles comprising mining properties of this nature, they should be classified in accordance with Annexes A and B, Paragraph LXXXIV, of the tariff of the ruling stamp law, and this has reference not only to cases relating to concessions which comprise several hectares and fractional hectares not reaching one-half, but also to such

concessions as are only for a fraction less than half a hectare.

Thus, the stamps which the parties interested have to provide for the issue of titles to properties comprising complete hectares and fractions of hectares, have to be at the rate of \$10 for every pertenencia or complete hectare, as well as for every fraction which reaches or passes a half, and when said fractions are less than half a hectare, whether a single fraction constitutes the property or whether it is an excess of various pertenencias, a stamp of \$5 is required on the first sheet of the title and another stamp of 50 cents on the second sheet, in accordance with Annexes A and B of Paragraph LXXXIV of the ruling stamp law.

Which I communicate to you for your information, and so that when petitions for concessions are presented to you which comprise complete pertenencias and fractions less than half a hectare, or when they refer to quantities less than the half of a per-tenencia, you may advise the parties interested as to the decision of the department of the treasury, so that they in due course can provide the stamps that are required

for their titles to property as per the resolution aforesaid.

MEXICO February 16, 1893.

[Circular No. 25.]

As it has often happened that in the copies of documents sent by the mining agents to this office in accordance with article 37 of the regulations of the ruling law, the copy of the extract referred to in article 21 of the same regulation is omitted, mention being merely made of it in the documents, this office, taking into consideration the importance of strictly observing the provisions regarding the framing of the extract contained in above article 21 of the regulation, requests you not to make the omission referred to, and on sending in the copies of the documents to include the copy of the respective extracts subsequent to the proof of the nomination of the expert having been accepted, as laid down in the aforesaid article 21 of the regulation.

MEXICO. February 21. 1893.

[Circular No. 26.]

As some difficulties have arisen with regard to the sending to this capital of the stamps that are required for the titles to mining properties, and which, according to the instructions on the subject given in circular No. 19 from this office, of November 14 last year, the miners were to deposit with the local post-office, this same office consulted with the treasury as to the advantages to be derived from the miners depositing the value of the stamps required for their titles with the stamp office in each district, and that the general revenue office in this district, after receiving advice from the corresponding local office, would then deliver said stamps to this department.

To this inquiry the department of the treasury answered as follows:

"I had the honor to receive your communication of January 20 last, in which you are pleased to consult with this office as to whether, in order to facilitate the miners in the payment of the stamps required for their titles to property, the value of such stamps could be deposited with the stamp offices in the same district as

the mining agencies, and whether the general revenue office in this capital could, after receiving advice from the respective office, in due course deliver to your office the stamps, the value of which had been deposited. In reply, I have the honor to inform you that there is no objection to the carrying out of what you propose, because, on the value of the stamps required for mining titles being paid in any of the revenue offices, they can be delivered by the general office in this capital, in view of the certificate that will be issued by the office where the deposit is made."

Which I communicate to you for your information, and so that when necessary you can notify the parties interested of this new decision, advising them at the same

time that the said circular No. 19 is canceled for the present.

MEXICO, February 25, 1892.

The soil of a large part of the Republic is essentially mineral, and almost all classes of mines exist—gold, silver, copper, lead, quicksilver, and also sulphur in the volcanoes of Popocatepetl and Citlaltepetl. Rich placer mines are found in some portions of the Republic, and these are almost in their infancy, since it is only very recently that foreigners could visit the remote portions of the Republic, where they are most numerous, on account of the hostility of the natives dwelling there; but the present Government has now such thorough control of these outlying States that it is possible to develop this industry largely, and without the hardships that accompany explorations into the gold fields of the far North.

I herewith attach a full list of the mines of the Republic, prepared by the direction of José Yves Limantour, minister of the treasury.

Rock salt	8, 056	70, 491	138	1,800	8, 194	71, 792	

There were no titles annulled during July, 1898.

Since July 1, 1898, a great improvement has taken place in the treasury department's statistical bureau; data is rapidly given form, and I vary for this reason from the usual rule by giving in the foregoing table the number and extent of the mines denounced during July, 1898, in addition to those legally taken possession of previous to that time. As will be seen, the two tables referred to are arranged so as to show both the number of mines in each State of this Republic and also the kind of ore contained therein. As is well known, silver mines predominate, though there are many that contain both gold and silver, and quite a number of gold mines.

One of the consequences of the depreciation of silver has necessarily been an increase in gold production throughout the Republic. While gold was quoted at par with silver, even with a depreciation of the latter, a country producing as much silver as Mexico had no interest in discovering, exploring, and working the gold placers, which exist in great number, while it could easily have access to and exploit the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as the silver as

ver veins.

Therefore, the gold produced in Mexico during many years was simply that found with silver, and hardly any resulted from the working of auriferous streams or other gold placers which were workable per se; but as soon as silver began to go down decidedly, the rise in gold stimulated the production of this metal, and the country has never produced as much as it now does.

By this it must not be understood that the abundant production of this precious metal is owing only to its rise in value. It would be unjust not to recognize the influence brought to bear upon it by legislation.

# GOLD PRODUCTION.

Ever since 1886, when silver began to fall to an alarming extent, the Government understood that it would be useful to stimulate the pro-

duction of gold by facilitating the exploration and working of the placers, and conceding special franchises and concessions to companies guaranteeing to work them with sufficient capital. This was the opinion of competent persons who were charged to study the crisis and the means of remedying it, and when, in 1894, things came to such a state that there occurred almost a panic, the Government laid before Congress the law of the 4th of June of that year. This law authorized the Executive to grant, during one year, concessions for exploring and working placer and auriferous mines to companies who guarantee to invest a capital of \$500,000 during the first three years and \$1,000,000 in five years. In exchange, these companies enjoyed a reduction of the annual mining tax up to 10 per cent, and were exempt from all other federal tax except the stamp tax; they could also introduce into the country, free of duty, the necessary machinery, tools, etc. Three large contracts were executed under this law, and they have been exactly fulfilled in all details. They were for the exploring and working of mines in Oaxaca, Sinaloa, and Lower California.

The following table will show the increase in the production of gold:

1892-93	\$1, 269, 907
1893-94	
1894–95 (under the law)	4, 744, 542
1895-96	6.054.078
1896–97	5. 861. 126
1897-98	7, 584, 182

These values are at par. According to the average rate of exchange of the last fiscal year, the gold exported represents nearly \$16,000,000

(Mexican).

Taking into account that which is exported surreptitiously, there being certain portions of Mexico, such as the Territory of Lower California, where it is very difficult to control the output, on account of the large extent of seacoast, it is not an exaggeration to calculate the production during the last year at \$19,000,000 (Mexican).

It would thus seem that this is a prosperous branch of production, greatly increasing, and giving promise of a brilliant future. The railroad through Guerrero will help to develop even more this branch of

national riches.

As a complement to what refers to the production of precious metals and their progress, I give the table which follows, of the production of silver:

	Mexican.
1881-1885 (4 years)	\$157, 826, 478
1886-1890	199, 208, 204
1892-1896	
1896-97 (fiscal year)	
1897-98 (fiscal year)	65, 119, 606

According to these tables the amount of production of precious metals during the last fiscal year, calculating the gold at 100 per cent premium, rises to the respectable figure of \$80,119,606.

# IMPORTS.

The following table, prepared by the minister of the treasury, shows the imports into Mexico during the fiscal year ended June 30, 1898, as compared with the fiscal year ended June 30, 1897. As will be seen, in spite of the establishment of factories here, there was an actual increase of \$1,399,397 in imports during the fiscal year 1897-98, and this in spite of the fact that \$2,600,268 worth of American corn was

imported in 1896-97, owing to the partial failure of the corn crop in this Republic, whereas in 1897-98 only \$43,069 worth of this cereal was brought into the country. The increase might, therefore, be estimated on the basis of normal conditions as nearly \$4,000,000. The table following this statement of imports shows what part thereof came from the various countries competing for Mexican business, and, as will be noted, 49 per cent came from the United States, showing a decrease of 4 per cent for the fiscal year 1896-97.

The reason for this decrease, aside from the diminution in corn shipments to Mexico, is that our exporters are not paying the attention to the commercial customs of this Republic that is given by manufacturers of other nations, principally England, France, and Germany. The business conditions of Mexico are noteworthy, and it will be of much pecuniary benefit to our merchants to study them. In the first place, there are very few concerns doing business here that have not ample capital to carry out all contracts into which they may enter. Failures are very rare indeed, and when they do occur are carefully investigated by the authorities in the interests of creditors, and any attempts to defraud are severely punished. Book entries are regarded as sacred. All books kept by business houses are known, and small stamp taxes paid on them, and thus a sort of surveillance is kept over them by Government authorities. All this tends to keep up a high standard of commercial credit, and, now that the commercial agency of R. G. Dun & Co. has extended its operations to this Republic, exact knowledge of the standing of the business houses here may be obtained.

As the terms of our American merchants are often very rigid, it is hard to reach an agreement, and much trade which by the exercise of a little tact and judgment could be handled by American merchants, goes elsewhere. For instance, terms usually offered by European merchants are four to six months' time whereas American houses often require that the total amount of their invoices be placed in some bank

in the United States before the goods are shipped.

With good local agents on the ground familiar with the language and the character of the buyers, the question might be easily settled. The superiority of many kinds of American goods is readily admitted here, and Mexican buyers are desirous of dealing with the United States and would do so more extensively than at present if trading facilities were offered them. I do not suggest that the full time offered by other nations be always granted, since we have many goods that this Republic must have, and these, of course, can be sold practically on our own terms; but I do say that the business methods of Mexico should be carefully studied. Buyers and sellers should acquire mutual confidence, and where that can not be attained, no business should be done. A happy medium between extended time and the requiring of a deposit before shipment, would seem to be to ship to reliable manufacturers' agents, have them import the goods, and then deliver them and collect and remit therefor according to contract.

A few words as to the value of contracts in Mexico. Once an absolute understanding is had between buyer and seller and the agreement reduced to writing, there is seldom any controversy, as a contract or a preliminary contract (known here as a "minuta") is regarded as binding, even though the only legal forms required are the affixing of a 50-cent stamp and the depositing of the minuta with a notary public, to be reduced to a public deed when one of the interested parties

requires it.

# IMPORTS INTO THE MEXICAN REPUBLIC IN THE FISCAL YEAR OF 1897-98.a

Articles whose exportation increased or decreased over \$5,000 during the fiscal year of 1897-98, as compared with the fiscal year of 1896-97.

# [In Mexican currency.]

a The Mexican customs estimate the value of imports in gold and of exports in silver.

#### EXPORTS.

The exports from the Republic of Mexico for the fiscal year ending June 30, 1898, were largely in excess of those for the fiscal year 1896-97,

as will be seen from the table next following.

It is true the war in Cuba is accountable for some of the large increases, as, for example, that of \$1,000,000 worth of cattle and \$2,000,000 worth of tobacco exported over the preceding fiscal year, and \$4,000,000 worth of henequen, on account of the interruption of trade with Manila. The exportation of a cargo of wheat from Tampico to Liverpool marks a new era in the agricultural progress of the Republic, since it was the initial shipment of that cereal, as, while wheat has seldom, if ever, been imported into this Republic, on account of the high duty, the country's production has heretofore not been more than sufficient for its needs. There was also a large increase in the exportation of coffee, and in this connection, I will call attention to the excellent average quality of the coffee raised in this Republic, as well as to the good grade of tobacco.

Everyone that has fairly tested the Mexican cigars is pleased with them, and they have the advantage of being sweet all the way through, so that the last half is as good as the first. An arrangement by which Mexican tobacco and some other articles could be admitted into the United States on favorable terms, and in return certain of our goods, such as cotton, packing-house products, coal, steel rails, machinery, furniture, wire, and nails, be allowed to enter Mexico at reduced rates of duty, would be a great advantage to both countries and stimulate trade relations. There are many articles that can even now be produced here to advantage and exported profitably. Among them are broom root, on which there is no duty imposed by the United States; rare and costly woods, like mahogany and rosewood, and many others common in Mexico but little known out of the country; coffee, which is now allowed to enter the United States free of duty; many kinds of delicious fruits, some of which have not even been heard of in our country; silver, gold, and other ores; cattle, hides, vanilla, rubber, chicle gum, beans, garbanzos (chick pease), istle (a fiber resembling hemp), cotton-seed meal, bones, hides of wild animals, and many other articles capable of exportation, in which trade must be developed by effort.

# EXPORTS FROM THE MEXICAN REPUBLIC IN THE FISCAL YEAR 1897-98.

Articles whose exportation increased or decreased over \$5,000 during the fiscal year of 1897-98 as compared with the fiscal year of 1896-97.

Total	128, 972, 749	59, 06 <del>9</del> , 519	111, 346, 494	58, 234, 210

The following table shows the proportion of exports to the various countries, and, as will be seen, out of \$128,972,749 (\$59,069,519) worth of exports in 1897-93, \$94,974,616 (\$43,498,374) went to the United States, or 73 per cent of the total amount exported from Mexico, as against 77 per cent in 1896-97.

As will be seen, the export business of the United States has not kept pace with the increase in the general exports; some other coun-

tries have greatly increased their purchases of Mexican goods, for

example:

France, which in 1896-97 bought of Mexico but \$1,873,522 (\$670,743), bought in 1897-98 \$5,320,016 (\$1,904,587), an increase of \$3,446,494 (\$1,233,844). Holland, which is reaching out for trade here, increased from \$57,906 (\$20,730) in 1896-97 to \$719,322 (\$257,517), an increase of \$661,416 (\$236,787). Cuba shows the most notable increase, from \$53,503 (\$19,155) in 1896-97 to \$2,152,544 (\$770,611) in 1897-98. This is due to the fact that Cuba had to have certain Mexican products, and that the advantage in favor of Spain was greatly diminished.

Germany's increase, though large, was not so remarkable, being \$2,578,989 (\$923,278), while the small Kingdom of Belgium about keeps pace with England, since the former increased \$421,765 (\$150,992), whereas the latter, with its position of second only to the United States (though at a great distance), increased only \$495,111 (\$177,249). The Mexican dollar has not varied much during the last six months of the fiscal year—only a few points, which fluctuations have caused no inconvenience of any kind.

# TRANSPORTATION.

A significant fact is that whereas, until recently, all rates to New York proper were made by water from Tampico or Vera Cruz, I have lately noticed overland shipments of even such bulky commodities as broom root, an evidence that the railways are awakening to the importance of the export trade from Mexico.

## UNITED STATES-MEXICAN FREIGHT RATES.

It is beyond the purpose of this report to undertake to name all rates between the two countries, but I have endeavored to give a general idea of the rates charged on the commodities commonly imported and exported. Both freight and passenger rates are determined here, as in the United States, by traffic associations presided over by a chairman, and the rates named by him are reasonably stable, though, as is customary, subject to change with or without notice, as may be stipulated. All intending shippers should communicate with the railway and obtain rates on the goods they expect to ship before making sale of same. The main purpose of these rates and the Mexican classification is to suggest what articles are dealt in in this Republic. The extent may be determined by a careful study of the imports and exports.

The following rates are in United States currency per 100 pounds, carload lots:

The Southwestern Freight Bureau Tariff, No. 4, effective January 27, 1898, which I send herewith, gives the rates, rules, and regulations applying on freight forwarded between St. Louis, Denver (Colo.), Kansas City, Memphis, Little Rock, Fort Smith, Nashville, Louisville, Chicago, Cincinnati, Milwaukee, Dayton, South Bend, Macon, Middlesboro, Omaha, Detroit, Cleveland, and Pittsburg, and points in their respective territories described herein. Also points in Texas and City of Mexico, San Luis Potosi and Monterey, and common points.

This tariff is generally referred to principally for south-bound business, but, as a matter of fact, on account of its limitations and the constant changes often made in some unnoticed corner of a supplement, it is used as a basis only, and all shippers contemplating business with Mexico should write to the proper persons, stating when they intend

to ship and what commodities, and obtain a rate thereupon.

# LAND TRANSPORTATION.

Land transportation from and to the United States through the frontier custom-houses of the Republic during the fiscal year of 1897–98 as compared with the fiscal year of 1896–97.

## MEXICAN RAILWAYS.

So many of our people are interested in railway supplies, that I have thought a list of the principal railways in this Republic, showing their length and location, would be of service. It is true that the principal systems have their purchasing agents in the United States, and the

<sup>&</sup>lt;sup>1</sup> Filed for reference in Bureau of Foreign Commerce, Department of State.

smaller systems are imitating the others when they can, but a good deal of business may be worked up by writing dealers in the City of Mexico, appointing agents here, and getting active and reliable corrrespond-

ents in the smaller centers traversed by the railways.

I shall make a practice of advising the Department of any new railway concessions that may be granted in this Republic, so that such of our people as may be interested may have an opportunity to inform themselves in the premises. As a general rule, all railways are represented in the City of Mexico, as the Government has an active supervision over those that have received subventions, and a general knowledge of the operations and conditions of all. The official in charge of this work is Don Santiago Mendez, subsecretary of the department of communications, City of Mexico.

Table of the principal railroads in the Republic.

RAILWAYS OF STANDARD GAUGE.

Mexican Central: From El Paso to City of Mexico (1,224 miles). Branches: Chicalote to Tampico, Irapuato to Ameca, Lerdo to San Pedro, Silao to Marfil, Tula to Pachuca	1,90

# Table of the principal railroads in the Republic-Continued.

## RÉSUMÉ.

Name, etc.	Miles.
16 standard-gauge lines	4, 294 2, 635
Total, 36 lines	

There have been a number of railway extensions spoken of during the last year. The most important is of the Monterey and Mexican Gulf Railway, from Tampico or near by to the City of Mexico, via Pachuca. An important enterprise, that of a canal to unite southern Mexico (beginning at a point on the Tehuantepec Railway not far from Salina Cruz) with the neighboring Republic of Guatemala, has been given a concession.

During the last six months, the railway system has increased by more than 314 kilometers (195 miles), of which 62½ (36.8 miles) pertain to the Mexico, Cuernavaca and Pacific Railroad; 60 (37.2 miles) to the Mexican Central on its branch from Jimenez to Hidalgo del Parral; 40 (24.8 miles) to the Mexican National between Patzcuaro and Uruapam; 25 (15.5 miles) to the International on its branch between Reata and Monterey, and the remainder to other lines, among which may be mentioned that which has lately joined the capitals of Yucatan and Campeche, an event which has with reason been celebrated with rejoicings by both States. Recently, the line between San Juan Bautista and the Gonzalez River was inaugurated.

The railway system of the Republic now measures 12,403 kilometers (7,707.2 miles), including 234.7 kilometers (145.8 miles) of state-owned tramways.

Some of the companies have either executed, or have in preparation, noteworthy works on their lines, such as the completion of the tunnel between Dolores and Catorce, which is 2.212 kilometers (1.37 miles) in length; the permanent station building of the Mexican Southern at Oaxaca; and the plans for the introduction of electrical traction on certain of its lines, presented by the Federal District Railway Company.

On account of the severe damage periodically suffered by the provisional bridges of the Tehuantepec Railroad over the river of the same name, a new location of the road at that point has been undertaken, so that the line may cross the river under favorable conditions and by a metallic bridge.

# FINANCE.

As will be seen elsewhere in this report, an important factor in the budget of Mexico is the revenue derived from the stamp tax, which I append in full. The present generation of Americans can remember two things distinctly: The abolition of the stamp tax from checks and the gradual reduction of same on articles of general consumption, and the resumption of specie payments; and the boys of to-day have seen, on account of the Spanish-American war, a return to the old method of raising revenue by the stamp tax, though it may be only for a short time.

<sup>&</sup>lt;sup>1</sup> Filed for reference in Bureau of Foreign Commerce, Department of State.

The Mexican generation of to-day has seen, first, its currency on a par with gold, and for a time silver dollars even at a premium over the American dollar, and then at first a gradual, then a sudden perceptible downward tendency, until one knew not where the decline in the monetary standard would stop, and the country suffered on account of the uncertainty, just as the United States suffered from the fear of free silver. It is a tribute to the recuperative power of Mexico that with the rapid reduction in the purchasing power of money and the increase in the expense of living at the same time, there has now been for more than ten years—in fact, ever since the present chief magistrate, President Porfirio Diaz, obtained thorough control of this Republic—absolute financial good faith and solvency, with constantly increasing credit to the nation, both at home and abroad.

With this prompt meeting of all obligations, has come a great influx of foreigners, attracted by opportunities offered here to large capital,

and by the guaranty of a stable government.

The department of the treasury, with nearly 4,000 employees, at the head of which is the able financier José Yves Limantour, well known and universally respected both here and abroad, presents a spectacle in its workings that is worthy of attention.

That the perfect financial order of this Republic has been attained only after much effort, and that therefore the present condition of Mexico is the more noteworthy, will be seen from the following short

sketch of the financial history of the country:

A brief account of the debt of Mexico is as follows: In 1823, immediately after the independence of the Republic was assured, the Government, seeing the necessity for improvements in the country, sent a representative to England, and the first bonds were floated in that country in 1825. Through troublous times, the Mexican Government faithfully recognized and liquidated according to its ability the English debt. The interest was paid as well as might be expected, and whenever the rate was reduced, so as to make the burden less onerous on the Mexican people, valuable considerations were given to compensate for the reduction, such as the monopoly of certain commodities raised and certain privileges controlled by the Government.

With the exception of the Maximilian and the French debts, classed in the same category, no attempt at repudiation was ever made; and the matter of that four years' episode in the history of Mexico is too well known for me to say more than that the loan in question was used to destroy the Republic, as far as was possible, and, such being the object, the loan has never been recognized by the succeeding republican gov-

ernments that have ruled uninterruptedly since 1867.

In 1888, a loan of £10,500,000 was taken by foreign bankers. This was secured by 20 per cent of the duties on importations and exportations, and the entire product of "direct contributions," and also some other taxes, known as "predial, patents, and professional;" and the agreement was that the proportion of the duties so set apart should amount to at least 10 per cent more than the quantity required for interest and a sinking fund. If the customs receipts failed to provide this, the portion of them so set apart was to be increased. This £10,500,000 was used to refund all the outstanding indebtedness of the Republic. This loan draws 6 per cent interest, and  $\frac{1}{2}$  per cent for a sinking fund, the effect of which will be to totally extinguish the debt in a term of years. Of this loan of £10,500,000, at the time it was made, when it was still in the nature of an experiment, the syndicate underwriting it took £3,700,000 at 70 per cent; but such was the suc-

cess of the issue in the principal stock exchanges of Europe, that the average price at which the bonds were taken by the public was 81, and the bankers in charge of the matter were glad to use their right of option to take the rest of the loan, £6,800,000, at 86½ per cent, and this latter issue was all sold at a good profit to the syndicate. This was the first undeniable evidence to the world of Mexico's prosperity and increased credit.

The next loan was for the purpose of building the Tehuantepec Railway, which unites the two oceans at about the narrowest point on the isthmus. This railway is owned by the Mexican Government, and bids fair to be a link in the great chain of railways that will connect the United States with the South American republics, and thus greatly increase the trade relations between the two great races. loan was for £2,700,000, bears 5 per cent interest, and is guaranteed by the receipts of the Tehuantepec Railway. This loan is convertible, if desired by the Mexican Government, at the rate of 2 per cent per annum; whereas the two others, of which I shall now speak, are payable at the option of the Government, after a notice of six months to the bondholders, at any time after the 1st of January, 1898. This same proviso also applies to the first loan of £10,500,000. third loan, of £6,000,000, was made in 1890; interest at 6 per cent; onefourth per cent as a sinking fund, secured by 12 per cent of the duties on imports and exports, with the same 10 per cent additional clause. This was made for the purpose of paying off on favorable terms the subsidies given to the Mexican and Mexican National railways, and of liquidating some floating indebtedness; and such was the improved credit of the nation, that it was sold to the public at more than 931.

The fourth and last loan, for £3,000,000, was made in 1893, at 6 per cent, with one-fourth of 1 per cent as a sinking fund; was secured by 12 per cent of the customs receipts, with the 10 per cent protection clause, and this, as well as the loans of £10,500,000 and £6,000,000, may be paid at any time at the option of the Mexican Government after January 1, 1898, though they all have many years yet to run, if this conversion should not be desired. This last loan was to complete the Tehuantepec Railway, to pay off floating indebtedness that had accumulated during a succession of short-crop years, and to reimburse the Government for the continued fall in silver, which at that time was not foreseen and provided for in the budget, as was done last year. Silver sold at 2 for 1 at the time of making up the budget, but a fall of 10 per cent was allowed for in the estimates by the clear-sighted minister of the treasury, so that when the fall actually came, there was no embarrassment.

The total interest payments on the exterior or gold debts is \$14,000,000 in Mexican money per annum, but of course grows less each year, owing to the gradual extinction of the debt.

The interest on the interior or silver debt amounts to less than

**\$4.000.000** silver per annum.

The whole interest, including the sinking fund, is about \$19,500,000, and all the other expenses of the Government, to judge by recent years, amount to \$30,500,000, all computed in silver. The receipts from customs duties and other taxes amply provide for all expenses. · continued and thorough development of the country by railways and the inducements offered to capital will, in my opinion, render the security more and more valuable each year; and the love of peace, so thoroughly taught to his people by President Diaz, will make any serious internal dissensions highly improbable in the future. The whole exterior or gold debt, calculated up to the end of the fiscal year 1897–98 at \$5 to the £1, is as follows, according to the figures furnished me by the treasury department:

# EXTERIOR DEBT.

<del>-13-13-13-13-13-13-13-13-13-13-13-13-13-</del>	
Loan of 1888—£10,500,000, 6 per cent, payable in gold.

Tehuantepec loan, £2,700,000, at 5 per cent	13, 500, 000
RÉSUMÉ.	
On June 20 1907 the total of the three leans of 1999 1900 and 1909	
On June 30, 1897, the total of the three loans of 1888, 1890, and 1893 amounted to	95, 055, 100 559, 500
On June 30, 1898, there remained to be written off	94, 495, 600 13, 500, 000
Total of exterior or gold debt on June 30, 1898	107, 995, 600
INTERIOR DEBT.	
The following shows the silver or interior debt:	
Issue of consolidated bonds of 3 per cent, circulation, approximately, on June 30, 1898	51, 000, 000
Tonne of E new cond conventible bonds	
Issue of 5 per cent convertible bonds.	
First series:  Bonds issued \$19,985,800  Written off up to June 39, 1898 104,900	19, 880, 900
Second series:	10, 000, 000
Bonds issued	19, 858, 700
Third series: Bonds issued up to June 30, 1898	3, 108, 000
Total issue of 5 per cent bonds up to June 30, 1898	
RÉSUMÉ OF BOTH DEBTS.	
Exterior debt, in gold, up to June 30, 1898	107, 995, 600 41, 668, 334
Total (United States currency)	149, 663, 934

Taking the gold debt of \$107,995,600 (United States currency) and reducing the silver or interior debt of \$93,847,600 at the rate of 0.444, in effect on June 30, 1898, we have a total gold debt of \$149,663,934, which, if again reduced to Mexican silver at the same rate of exchange, amounts to \$337,043,179 in Mexican silver. This, divided among the population of 12,570,195, as obtained from the official census of 1895, with the small estimate of 430,805 added for increase in the last three years, or 13,000,000 in all (no allowance being made for the fact that it is difficult to obtain full figures from certain Indian tribes whose superstitions are opposed to stating the number of individuals in their families), gives a national debt of \$25.93 silver per capita; the average annual interest on which may be estimated at about 5 per cent—\$1.30 silver per capita.

A noteworthy fact is that, with the exception of this national debt and the debt of the City of Mexico (the latter authorized for the sole purpose of concluding the great drainage work, which it is expected will make this city one of the most healthful in the world), there is almost no municipal or State indebtedness in this Republic; in fact, I know of but one city, San Luis Potosi, that has any debt, and that is small; and of but one State, Jalisco, that has even made a contract for a loan. In the case of Jalisco, the loan (of \$1,500,000 gold) is as yet only a contract, and is for the purpose of constructing a thorough system of waterworks in the principal city of that State, Guadalajara, one of the most beautiful, clean, and agreeable places in the Republic, and a part of this consular district.

Below, I give full particulars of the debt of the City of Mexico. As will be seen, it amounts at present to \$11,000,000 gold. The work of the drainage canal and the sewerage system (the contract for the latter having been let during the last year to a French company) is to be completed during the next three years.

The municipal loan of \$12,000,000 at 5 per cent interest was made in London with the Trustees, Executors, and Securities Insurance Corporation, Limited, who took the same at 70 per cent, with obligation on the part of the municipality to pay, each quarter, \$180,000 gold. There is also to be paid \$450 gold, each quarter, to the financial agent as commission, and one-fourth per cent to the National Bank, also as commission.

The following payments have been made:

Year.	Expenses.	Commission National Bank.	Commission Sion London.	Funding.	Proceeds.	Exchange.	Total.
1889		\$888.76	<b>81, 437, 50</b>		\$800, 000. 00 200, 000. 00	\$134, 574. 86	\$800, 000. 00 336, 901. 12

RECEIPTS AND EXPENDITURES OF THE CITY OF MEXICO.

A little over twenty years ago, in 1876, the municipal receipts did not greatly exceed \$700,000. In 1897, these receipts amounted to \$3,079,074 (\$1,610,356).

The fiscal value of town and country property in the Federal district was estimated at \$76,000,000. It now passes \$120,000,000 (\$62,760,000). The number of commercial establishments in 1876–77 was 3,000; at

the present time, it is about 8,000.

These facts are sufficient to demonstrate the development of the

locality. It has followed the general progress of the Republic.

The \$3,079,074 (\$1,610,356), to which I have just referred and which corresponds to the year of 1897, represents, distributed among the 330,698 inhabitants, which, according to the last census, form the town, a charge of \$9.33 (\$4.88) per capita, which is considered a very low estimate, as the general opinion is that many persons escaped from the census. Even admitting this figure of \$9.33 (\$4.88) per inhabitant, the burdens of the municipal expenses on the people are much less than in many of the principal cities of Europe and the United States, and this notwithstanding the fact that Mexico is realizing one of the greatest of improvements, greater than many that the richest and most advanced cities of the world can show, and which will place her on a level with any of them so far as regards hygiene. It will be understood that I speak of the works of drainage and public health, whose importance can not be exaggerated.

The sources of revenue of the municipality amount to the sum of

**\$3,079,074** (**\$1,610,356**).

Those that have provided the greatest amounts are:

Source of revenue.	Mexican cur- rency.	United States currency.
Direct contributions. Slaughterhouse Contributions of wine, liquor, and beer establishments. Pulque shops. Water taxes	543, 708 173, 088 127, 244 180, 084	\$432, 212 284, 359 90, 525 66, 549 94, 154 108, 261

The other principal sources of revenue are public amusements, \$90,178 (\$47,174); tobacco factories, \$91,541 (\$47,895); pawn shops, \$67,714 (\$55,414), etc., which, with others, complete the total mentioned.

As regards municipal expenses, I will say that during the last year they amounted to \$3,086,663 (\$1,614,325); that is to say, \$7,589 (\$3,969) more was spent than the amount of receipts, but the deficit was made up out of an existing cash balance from the 1st of January, 1897.

The principal expenses are as follows:

	Mexican cur- rency.	United States currency.
Natonal Bank of Mexico (for services referring to the debt and for advances).  Public works,	\$1, 290, 417	\$674, 88 206, 29
Lighting	238, 892 172, 229	124, 94 90, 08
Municipal prison. Purchase of springs.	168, 021 105, 000	87, 87 54, 91

As will be observed, the largest amount corresponds to the payments made to the National Bank, mostly for the interest of the city's debt.

The total applied on this debt (interest and sinking fund) amounted during the year to \$1,525,832 (\$798,010), and as \$350,000 (\$183,050) were owing to said establishment, the total of payments ought to have

been \$1,875,832 (\$981,060). As only \$1,290,417 (\$674,888) was paid, there existed on January 1,1898, a balance of \$586,000 (\$306,000) in favor of the bank.

## ADMINISTRATION OF MUNICIPAL REVENUES.

I have received from the office of the mayor of the city of Mexico a statement of the financial condition of the city in 1898, which shows the balance made by the office, with the different sources from which the revenue proceeds, and which constitute the funds under its care, and the distribution during January to June, 1898, as follows:

## RECEIPTS.

Lease of lands.  Pawned articles that have become the property of the city.  Saddlehorses.  Sums owing to the ayuntamiento (city of Mexico).  Public hacks.  Private carriages.  Carts. #### REVENUES.

Federal revenues are divided into three groups: (1) Duties on importations and exportations; (2) internal revenue; (3) revenue from public property, such as telegraph receipts, postage stamps, etc.

Among the taxes that have produced the greatest profits to the Government is the stamp tax (which has already been spoken of), on account of the considerable increase in the general business of the country. The existing law in regard to importation is that of July 12, 1891, with subsequent amendments. Those relating to exportation are as follows:

Law of 12th of December, 1893, and 3d of December, 1894, relating to dyewoods and woods for construction.

Duty on the exportation of "rais root" (broom root), chicle, henequen, coffee, skins, istle, orchilla, which vary from 152 cents to 3 cents a kilogram.

Tonnage, light-house, storage, navigation patents, consular certificates, etc.

Of the duties imposed by the different States, 30 per cent is paid to the Federal Government.

The total receipts of the Government from all sources in 1897 were nearly \$52,000,000 (\$23,920,000), and the following figures as to the budget will, I think, prove of interest, if the three columns are compared, as showing the conservatism of the Government estimates. In an address to the Chamber of Deputies on December 14, 1897, an interesting table was read, giving a history of the operations of the fiscal year 1896-97; and by deducting the expenditures of \$48,330,305.25 (\$22,231,940) from the receipts, \$51,500,628.75 (\$23,690.281) plus \$2,819.17 (\$1,297) additional receipts, we see how the surplus of that fiscal year of \$3,170,123.50 (\$1,458,257) is arrived at.

¹The reductions have been made on the basis of the valuation given by the United States Director of the Mint January 1, 1898—46 cents. It should be noted that the exchange has decreased since the estimates for the year 1897–98 were made; but in order to avoid confusion in comparing the estimates for the two years, one valuation has been adopted in making the reductions. The United States equivalents are therefore approximate.

This gives a complete comparison of the appropriations for the fiscal year 1896-97, and those estimated as necessary for the fiscal year 1897-98. By studying the various items, the significance of almost every increase or decrease will be apparent, and the result is an excellent indication of the growing prosperity of Mexico.

The official statement of the minister of the treasury and secretary of state, shows that the revenues for the fiscal year ending June 30, 1897, were \$51,500,628.75 (\$23,690.281), whereas the expenditures were more than three millions less, showing a surplus for the year of \$3,170,123 (\$1,458,257), which, added to the surplus of the year before, makes a surplus of \$7,754,975 (\$3,567,289) in the treasury at the close of the fiscal year of 1897–98, and this in the face of a decline in silver, which, however, was anticipated in the calculations of the able minister of the treasury, José Yves Limantour, so that it did not take the Government unawares. The budget for the past fiscal year places the receipts at \$52,109,500 (\$23,970,370) and the expenditures at \$20,000 (\$9,200) less, but these calculations are made very conservatively, and the treasury is likely to again show a surplus.

The official estimate of the detailed expenses of the Government from the budget for 1898-99 is as follows:

Department.	Silver.	Gold.
LegislativeExecutive	\$1,018,643.90	\$486, 576
Judicial	444, 654, 15	37, 246 204, 541

Public debt. Army and navy appropriations.	19, 964, 268, 00	9, 188, 564 5, 405, 000
Total	52, 289, 484, 45	24, 058, 168

For further details, I refer to the Bulletin of the American Republics for May, 1898, pages 1887 to 1894. Also to pages 1918 and 1919, in which reference is made to the last message of President Diaz and to the report of the minister of the treasury.

## GENERAL NOTES ON MEXICO.

The climate of the Republic varies from cold to tropical heat, and it is owing to this circumstance that the products of the soil are so varied; hence, the country offers exceptional inducements to laborious and intelligent immigrants and to capitalists, from the great profits that are to be expected. Most of the fortunes of Mexico are derived from plantations whose owners rarely see them, and who enjoy large revenues from them and are able to live where they choose, much after the fashion of the landed class in the South previous to 1860, except that the evil of slavery is unknown, and the people are contented and happy. wants are few, they make good workmen, are docile and easily managed if treated with humanity, and, once you succeed in gaining their confidence, they are excellent factors in the success of an enterprise. Strikes among them are very rare, and such a thing as the interference by employees with the operations of a factory or other enterprise by force, is unknown and punishable by severe penalties. The result of this state of things is that large manufacturing enterprises are being started everywhere in the Republic, and they are doing well, increasing their operations, and the failure of any of them is practically unknown. fact, failures of any kind are very rare. Most of the business men are making money, and the stocks of goods in the large shops in the City of Mexico will compare favorably with those to be found in any of the large capitals of the world, although the mammoth department store is unknown here.

To return to the resources of the soil. All that is produced in Europe and America can be profitably raised in some part of Mexico, and all that the country requires is large immigration to develop its great natural resources. The maguey plant, which has been cultivated extensively, can be put to many different uses. The Indians make a rough sort of cloth, working with it as with cotton or any other textile plant. Out of its fiber, they make many different sorts of stuffs, and all these without the aid of modern appliances. Besides, from the juice of the maguey is made a sort of liquor called mescal, much liked by the natives and said to be very efficacious in certain maladies. From the same maguey juice the well-known pulque is made, which is to the native what beer is to the German and cheap red wine to the French laborer. A splendid quality of paper is also made from the fiber of this plant.

Among the cereals are corn, wheat, barley, rice, and all known breadstuffs. The olive and the vine can be cultivated profitably in some of the States of the Republic. The excellent results of coffee planting in Mexico are so well known as to need no mention; but it may be well to state that even this industry is comparatively in its infancy, as well as the raising of cocoa, and that extensive properties admirably adapted to the cultivation of coffee, cocoa, tobacco, vanilla, indigo, cotton, sarsaparilla, henequen, ixtle, jallap root, sugar cane, rubber, chili, beans of all kinds, lentils, artichokes (equal to the best French), pineapples, cocoanuts, and vegetables of all kinds can be bought at ridiculously low prices, from the point of view of other countries where these industries are highly developed. The sugar industry, although in its infancy, has given good results where it has been tried. There is also a well-paying business to be developed through the culture and judicious cutting of valuable woods, such as rosewood and mahogany. The various uses to which they could be put would exceed the scope of this report, which is a sketch of the country in general, though special reports will be sent from time to time to the

Department on industries that seem of interest.

Cattle raising is one of the principal industries of Mexico, since the soil in many portions is very well adapted thereto—as also to sheep raising—and not only are dairy farms now becoming quite common and the results from them excellent, but, besides supplying the requirements of the Republic, large quantities of beef cattle have been shipped out of the country this last year, and sold at high prices on a gold basis.

Silkworms have been imported lately, and, so far as the experience of

those interested goes, the industry will be profitable.

The development of agriculture has naturally produced a large demand for agricultural implements, and with the increased purchasing power of the people there has arisen a market for cotton and woolen manufactures, and factories are springing into existence at many points, some accessible to the railways and some even in out of the way places, all of which seem to be doing well. The writer has seen paper mills, glass works, china manufactories, manufactories of stamped goods, and many others.

As an example of the favorable laws that must eventually attract colonists to Mexico in large numbers, attention is called to the principal clauses of the law of December 15, 1893, in which it is enacted that colonists may purchase bodies of land consisting of as much as 2,500 hectares (6,250 acres) at prices that are each year established by the Government, which last year were as follows:

	Price per hectare (2.411 acres).		
- State.	Mexican currency.	United States currency.

The payment for these lands will be extended by the Government to cover a period of ten years, the payments to begin in the second year after the occupation, or, if cash is paid, a reasonable concession in price is granted. For ten years after their arrival, colonists enjoy the following privileges: Exemption from military service and from all kinds of taxes, except municipal taxes, which are very small; exemption from import duties on provisions, agricultural implements, machinery, tools, construction materials for houses, furniture, and cattle for farm use or for cattle raising; exemption from export duties on all fruits raised which the said colonists wish to export (this last exemption is personal and nontransferable); exemption from taxes for stamps for the legalization of signatures and passports that the colonists may have, in order to prove that they are desirable immigrants and have a good reputation in their own country, a certificate in regard to which is required by the Mexican Government. As may be seen from the foregoing, the Government of Mexico is extremely liberal in its treatment of the right sort

Digitized by GOOGIC

of immigrants, and now that this fact is becoming generally known, it is not unreasonable to suppose that immigration will greatly increase and that the prosperity of the country will become more and more

apparent to the world.

I would not advise Americans without some capital to seek their fortunes in Mexico, since the same reasons that often render investments here extremely profitable make conditions all the harder for our laborers, accustomed to good wages and comforts which, as employees of others, they could not obtain here. Wages are low in general throughout this Republic, and have not increased in proportion to the value of lands and some exportable products.

Furthermore, I would not advise anyone to come here to locate without some knowledge of Spanish, for, especially in the small towns and the country, a man unacquainted with the language would be at a great

disadvantage.

## FUEL.

The fuel question has aroused much interest here, especially during the last ten years, and the Mexican Government has viewed with apprehension the destruction of the forests in the federal district and the states adjacent, fearing changes in climate and rainfall were the mountains to be laid bare. In the tropical parts of Mexico this question is not so momentous, as the growth there is so luxuriant that the trouble is rather to suppress it. It is well known that comparatively little coal that it will pay to mine has been found in this Republic, and what has been developed profitably is located not far from the Rio Grande. It would appear that the numerous companies that have announced their intention to provide the City of Mexico and other cities in this Republic with electric power brought from a distance will supply to a great extent the lack of cheap fuel. The street-car system of the City of Mexico is in process of transition from mule and steam power to electricity, and many of the manufacturing plants that now use wood or coal will follow the example of the street railway.

This does not mean necessarily that there will be any decrease in the importation of coal from the United States, since there is a great demand for American coal all over this Republic, and during the fiscal year 1897-98, the importations amounted to \$924,423 (Mexican), as against \$881,557 for the fiscal year previous. Coal is admitted free. There are many ways by which it can be brought into this Republic, and the trade with the United States seems likely to increase, if proper

effort is made by our people to secure it.

## LINEN MILLS.

Among the manufacturing interests that have been developed recently, I find linen mills coming into prominence, and whereas in former times all the flax used came from Ireland, it is now produced in several States of this Republic and has given excellent results. The mills will contract for all that is raised at a fair price, and they have gone to considerable trouble and expense to stimulate the native production of flax, which is now increasing rapidly, although as yet, not nearly supplying the needs of the linen manufacturers of Mexico.

#### SALT INDUSTRY.

American salt manufacturers from time to time write this consulategeneral for information regarding the salt trade in Mexico, the number of salt mines, and their locality. I have carefully investigated this matter and find that there are no salt mines now in operation, properly so called. There are various enterprises for the evaporation of salt, either near the coast or inland, where salt marshes are found. It may be of interest to our people to be informed of the location of these plants; I therefore give them by States. The principal ones are:

In Sinaloa: Chametla, district of Rosario; Huisache, district of Mazatlan; Ceuta, district of Cosala; Higueras, Altata Jaquisahuato,

district of Sinaloa; Comichi, district of Fuerte.

Lower California: Isla del Carmen.

Colima: Cuyutlan, Cualota, and Cualatilla, municipality of Manzanillo; Guayabel, Guayango, municipality of Union; Pascuales, San Pantaleon, Vega, and Carrizal.

In Tamaulipas: Municipality of Matamoros, San Fernando, Soto la

Marina, Villerías Aldama.

In Chiapas: Ixtapan, department of Chiapa; Tonala, department of Tonala; salt water in small lagoons or in waters of little depth.

In Zacatecas: La Lagunilla, hacienda of Espiritu Santo, department of Pinos. Villa de Cos.

In San Luis Potosi: Peñon Blanco.

In Puebla: Municipality of San Nicolas, district of Chalchicomula; municipality of Piaxtla, district of Acatlan; municipality of Chila, district of Chiautla; municipality of Tehuacan and of Zapotitlan, district of Tehuacan.

## AREA AND POPULATION.

Below I submit a table showing the area and population of the States of the Republic, according to the census of 1895, as compared with that of 1879:

# BANKING IN MEXICO.

Prior to the passage of the banking law of June 3, 1896, the banking business of this Republic was done principally by the four banks of this capital. A short sketch of each is here submitted.

The Bank of London and Mexico commenced its operations in Mexico under the name of Bank of London, Mexico and South America, in the

year 1864, without a federal concession, as according to the legislation then in force it was not necessary. On the 22d of June, 1864, its director solicited and obtained the inscription and register of the bank according to article 53 of the Commercial Code of the 16th of May, 1854, and in March, 1865, its statutes were translated and registered.

When, according to the stipulations of the Commercial Code of April 20, 1884, it became necessary to obtain a federal concession, that of the Employees' Bank was transferred to it, modified according to the contract of May 11, 1886. On the 21st of August, 1889, a new contract was executed, changing the name of the bank to that of "Bank of London and Mexico," at the same time making other modifications to the contract of the 11th of May, 1886. Up to 1891, it had a capital of \$1,500,000, which was in that year increased to \$3,000,000, Mexican money. Recently, the capital stock was further increased to \$10,000,000, without any expense to the stockholders, as the reserve fund, which amounted to about \$2,000,000, was used to complete the rew capital up to \$5,000,000, and was issued to the regular stockholders as a stock dividend. The balance, to complete the \$5,000,000 of new stock, was offered to the public, the subscriptions amounting to \$22,000,000, or \$17,000,000 more than was wanted.

The contract of August 16, 1881, by which the Mexican National Bank was established, was re-formed on the 15th of May, 1884, permission being granted in said contract to combine with the Mercantile Mexican Bank and change its name to "National Bank of Mexico."

Present capital, \$20,000,000.

The "Banco Hipotecario" was established by virtue of a concession dated May 22, 1882. This concession was re-formed on the 31st of August, 1888, changing its name to the present one (The International and Mortgage Bank of Mexico) and increasing its capital stock to \$5,000,000.

The national "Monte de Piedad" was established on the 25th of February, 1775, with a capital of \$300,000 given by Don Pedro Romero de Terreros. Formerly, it had the power to issue notes, but this power

has since been revoked and all notes redeemed.

As will be seen, the existing banks are prosperous and in a flourishing condition, but the demand for increased facilities is such that new banks are being formed, and the operations of the old ones increased and extended in various directions.

The business was so profitable that the great banks established branches in many parts of the Republic, and successfully resisted for many years the enactment of any law that should curtail their privileges. It was only by making certain concessions to the National Bank of Mexico that the Government could properly pass a law extending the privilege of the issuance of notes to other corporations. The oldest bank, the Monte de Piedad, has now been brought under the absolute control of one of the large banks, and is in consequence inactive, so that there are in the City of Mexico but two banks that issue notes which pass current all over this Republic, and one that issues mortgage bonds.

In 1896, a commission was appointed by the Mexican Government in which these banks were given full representation, and a new banking

law enacted, of which I append a translation in full.

As will be seen, the privilege of issuance of notes in the City of Mexico is confined to the Banco de Londres and the Banco Nacional,

<sup>&#</sup>x27;Filed for reference in the Bureau of Foreign Commerce, Department of State.

and though this privilege is granted to the banks to be established in the States of this Republic outside of the capital, yet these are not permitted officially to establish redemption agencies for their notes, and it will be a long time before the notes of State banks occupy the same position in the public mind as those of the banks of the capital, though they are now circulating more freely than ever before. There are a great many private banking houses in the City of Mexico and elsewhere in the Republic of high standing, that do excellent business. During the last fiscal year, an American bank has been established here which seems to be doing well.

The following table will show the condition of all banks in this Republic, organized under the Mexican banking law or under special

concessions, on June 30, 1898:

## ASSETS.

The banks marked (\*) have been established since the issuance of

the banking law of March 19, 1897.

Besides these banks, several have been organized since the close of the fiscal year, and doubtless before long, each State in this Republic will have one bank, in order to obtain certain advantages which the first bank in a State receives according to the terms of this law. The establishment of these banks will make the transaction of business much easier than heretofore, and do away with the extraordinary exchange charges that have been prevalent, especially when life and property were not so safe as they are now. At this time, drafts can be drawn on many distant points at a slight expense, and competition is reducing even this charge.

The terms of the concession lately granted to Chihuahua capitalists are here given in full, for the reason that this is a "refactionary" bank, the first of this class to be organized. This bank will enter a different field from those now in existence and will be an important addition to the banking facilities of the city. It is empowered to issue certain

classes of security other than bank notes.

The following are the principal provisions of the concession:

ART. 1. Messrs. Ramon Alcazar, Enrique C. Creel, Guillermo Verhmeren, Antonio V. Hernandez, and Carlos Bracho are empowered to establish a "Banco Refaccionario" in this city, and said bank may engage in all kinds of banking transactions, with the exception of those that are expressly prohibited by this concession and by article 98 of the general banking law, and in other respects, shall be subject to the general terms of the banking law and the following provisions:

I. The name of the bank shall be "Banco Refaccionario Mexicano."

II. The share capital is fixed for the present at \$1,000,000.

III. The domicile of the bank shall be the City of Mexico.

IV. The "Banco Refaccionario Mexicano" may establish four branches, to be sit-

uated at such cities as it may deem expedient.

V. In order to establish other branches, the bank must obtain the authorization of the department of finance, and must increase its capital by \$100,000 for each new branch.

VI. To guarantee the establishment of the bank, a deposit of \$100,000 in 3 per cent consolidated debt bonds, has been made in the general treasury of the federation. VII. This deposit of \$100,000 shall be returned to the bank as soon as it begins

VIII. The "Banco Refaccionario Mexicano" shall, during twenty-five years, counted from March 19, 1897, enjoy all the exemptions and diminutions of taxation granted by articles 121 to 127 of the general banking law, to which it is entitled according to article 128 of said law.

IX. Any transfer of the concession not expressly approved by the department of finance shall be null and void, with the exception of the transfer mentioned in arti-

cle 10 of the banking law

X. This concession shall last for forty years, counted from March 19, 1897.

XI. The loans which the bank may make under the powers granted to it by Section I of article 88 of the general banking law, shall not in the aggregate exceed the amount of capital actually paid up and the amount of bonds (bonos de caja) which it may have in circulation.

XII. Outside of the case mentioned in said Section I of article 88 of the law of March 19, 1897, the bank may not transact loan and discount operations running for

more than six months, and not guaranteed by two responsible signatures.

XIII. The amount of bonds which the bank may put into circulation shall never exceed five times the capital actually paid up, nor may it at any time exceed the amount of specie and bullion which the bank holds in its vaults, added to the value of the immediately realizable or negotiable securities which it has on hand. For the purpose of this article, the following are held to be immediately realizable or negotiable securities.

(a) Commercial notes running for a period of time which shall not exceed the term of the bonds issued, as a consequence of the transaction or transactions that

have been performed.

(b) Mortgage bonds issued by banks or by mercantile corporations.

(c) Bonds of the Mexican Government.

(d) Bonds or any other securities, provided that they are quoted on one or other of the home markets or in the bourses of London, Paris, Berlin, or New York, and provided they have paid dividends or interest with entire regularity for at least two

years prior to the date on which they are acquired by the bank.

XIV. During the first five years, counted from the date on which the bank opens for business, it shall enjoy entire freedom of action as to the minimum amount of bonds which it shall circulate, but after that period, the bank must maintain constantly in circulation an amount which shall at least be equal to its paid-up capital, if the latter does not exceed \$500,000; and if the capital exceeds that sum, the amount of bonds in circulation must be 50 per cent of such capital, with the proviso, how-

ever, that the total of the bonds shall not be less than half a million dollars.

XV. At any time subsequent to the period of five years above mentioned, when
the bonds outstanding do not amount to the required figure during one hundred and eighty consecutive days, or during one hundred and eighty days, even though interrupted, if they occur within a period of one year, the bank shall, even though it is to continue doing business, cease to enjoy the franchises in the matter of taxation granted by the general banking law, after an announcement to that effect has been made by the department of finance and the bank has been heard in its defense.

XVI. The bank may not issue certificates of deposit payable at sight to bearer. XVII. The bonds which the bank may put into circulation shall set forth the time in which they are to be paid and also the rate of interest which they bear. They shall be of \$100, \$500, and \$1,000 denominations, and be payable both to bearer and to given individuals by name. They shall have coupons for the payment of interest when the time for which they are to run exceeds six months, and the form or model

according to which they are to be printed shall be submitted for approval to the

finance department.

XVIII. The principal and interest represented by the bonds in circulation shall enjoy with respect to payment, over all other claims, the same preference as is granted to bank notes by article 25 of the general banking law.

XIX. The bank may not pledge its bonds or the notes it has discounted as security. XX. Neither officers nor employees of the federal executive may be members of the council of administration nor managers of the bank or its branches. This prohibition applies to functionaries and employees of the executive department of the States in which the bank may establish branches.

XXI. In order to compensate the Government for the expense of supervision, the bank shall hand over in quarterly installments, in advance and in cash, the sum of

\$3,000 per year.

XXII. Any controversy that may arise with the Mexican Government in regard to this contract shall be submitted to the decision of the federal tribunals of the Republic, with the exception of such cases as, according to the law, have to be

settled by administrative action.

ART. 2. Messrs. Ramon Alcazar, Enrique C. Creel, Guillermo Verhmeren, Antonio V. Hernandez, and Carlos Bracho accept the concession for the establishment of the "Banco Refaccionario Mexicano" according to the terms and subject to the conditions mentioned in the foregoing article, and in entire conformity with the laws and enactments on the subject.

Done in the City of Mexico on October 12, 1898, in two copies, to which have been attached at the expense of the interested parties the documentary stamps payable on the capital of \$1,000,000, and signed by Lic. Joaquin D. Casasus on behalf of Messrs. Ramon Alcazar, Enrique C. Creel, Guillermo Verhmeren, Antonio V. Hernan-

dez, and Carlos Bracho.

The suggestion of an international bank to be established in the United States, with branches here and elsewhere, has aroused much interest here, and the ultimate passage of the bill now pending is expected by business men here to prove another strong bond of union to the two countries.

Bank failures are unknown in this Republic, and the Government has, attached to each bank, an inspector whose duty is to exercise a strict supervision as to the notes issued, and other operations. In fact, he

must sign all bank notes to make them valid.

So great has been the success of the Banco Nacional, that whereas the stock is quoted at 1442, a large advance over a year ago, only 45 per cent of the par value was ever required from the shareholders, and it is unlikely that more will be called for, though they are bound to pay up to the par value of the stock if required. This fact constitutes an important element of the strength not only of this bank, but of others more recently organized, as it is the custom here to subscribe for all the capital stock at the start, and to call for only what money can be used to advantage in the business.

The security required by the banks here is of such a nature and the formalities so difficult, that not many American business houses can comply with them, and in consequence, the extension of American interests is not so rapid as it should be. If there were bonded warehouses in the City of Mexico, whose certificates could be negotiated, it would be a means of facilitating business and at the same time would seem to promise good results to the founder, provided they are properly

conducted.

An important order was issued by the treasury department here at the beginning of the fiscal year that has just closed, forbidding the banks to count as cash on hand, notes of their own or of any other bank, so that the statements of cash on hand for the last half of the fiscal year represent actual specie. The following table represents the condition

of the Bank of London and Banco Nacional on September 30, 1897, and that of the other banks named on August 31, 1897:

Name of bank.	Cash on hand. a	Notes in cir culation. a
National Bank	\$27, 355, 480 13, 488, 999	\$22, 941, 25 14, 258, 56
State of Mexico San Luis Potosi	93, 623	11, 200, 00
Durango	245, 871 589, 053	561, 48 1, 314, 82
Chihuahua Commercial Bank	215, 506 540, 949	258, 19 1, 242, 51
State of Zacatecas	580, 533	383, 92 1, 092, 72
Mercantile Bank of Yucaten	727, 289 44, 664, 636	58, 20 42, 111, 68

#### a Mexican currency.

If to the reserve cash on hand of these eleven Mexican banks of issue, we add the reserve of the Banco Hipotecario and Monte de Piedad, the money in sight existing in the Republic will be as follows:

Banco Hipotecario	\$712, 915 287, 915
-	1, 000, 830

Which, added to the former total, gives \$45,665,466.

The capital employed in banks of issue at the same date, September 30, 1897, was as follows:

## [Values in legal Mexican silver.]

Name of bank.	Authorized capital.	Subscribed capital.
National Bank of Mexico.  Bank of London and Mexico Bank of the State of Mexico. Bank of Durango  Mining Bank of Chihuahua Commercial Bank of Chihuahua Bank of San Luis Potosi. Bank of Nuevo Leon Bank of Zacatecas Bank of Yucatan  Mercantile Bank of Yucatan  Total	10, 000, 000 1, 500, 000 1, 000, 000 1, 500, 000 600, 000 1, 100, 000	\$8, 000, 000 10, 000, 000 750, 000 600, 000 1, 500, 000 550, 000 600, 000 800, 000 1, 000, 000 1, 000, 000
RÉSUMÉ.		. \$38, 900, 000

# Authorized capital. \$38,900,000 Subscribed. 24,720,000 Still to be paid in 14,180,000

Add to this the authorized capital of the International Mortgage Bank of \$5,000,000, and we have—

Authorized capital	

The increase in capital under the operations of the new law is quite noteworthy, since, as will be seen, on June 30, 1898, nine months after the statement published above, the combined authorized capital of the

banks amounted to \$48,500,000, or a gain of \$4,600,000, owing to the establishment in that time of the following-named banks:

Bank of Coahuila	Capital. \$1,600,000
Bank of Sonora	500,000
Western Bank of Mexico	500,000
Mercantile Bank of Vera Cruz	
Total	4, 600, 000
Of which there is still to be paid in, though subscribed—	
Bank of Coahuila	
Bank of Sonora	250, 000
Western Bank of Mexico	250,000
Mercantile Bank of Vera Cruz	, ,
Total	2, 000, 000

Leaving a net increase in paid-up capital for the year of \$2,400,000.

The new rule of the treasury department naturally brought down the cash (specie) on hand considerably, so that on January 31, 1898, the total cash (specie) on hand was \$34,798,486.

Since that time up to the close of the fiscal year 1897-98, there has been a gradual increase in cash (specie) on hand in the banks, as follows:

nks of the capital: National		
National		
	\$19, 320, 268	\$18, 965, 796
London and Mexico	9, 974, 570	10, 817, 98
Mortgage Bank	1, 086, 324	878, 288
Monte de Piedad	113, 867	102, 350
nks of the States:	1	•
Commercial Bank of Chihuahua		176, 94
Mining Bank of Chihuahua	1, 010, 215	1, 073, 92
State of Mexico		. 64,41
Yucatan Mercantile Bank	438.095	741, 35
Bank of Yucatan	1, 063, 656	1, 126, 49
Bank of Nuevo Leon	645, 169	
Bank of Sonora	145, 952	
Bank of Zacatecas	438, 095	
Bank of Sinaloa		. 133, 40
Bank of Durango	404, 058	
Bank of Coahuila.		
Bank of San Luis		

resume.		
Cash on hand (specie): February 28, 1898.		
March 31, 1898.	\$35, 47	1,996
The specie amounted to—		
April 30	38, 97	9, 681
May 31	40, 99	8, 045
June 30	41, 37	6, 052

As will be noticed, there was a steady increase of specie each month, and where this record ends, the totals were only \$3,500,000 below the high point reached on September 30, 1897, before the new ruling of the treasury department explained in the foregoing pages.

There are several explanations for this steady increase: The exportations of grain, beans, and cattle to Cuba at good prices, and heniquen to the United States at higher prices than ever before reached, on account of the interruption of trade with Manila. If the items of the increase are studied, there will be seen a decentralization movement, and, in spite of the fact that the banks in the capital at the beginning of the year had six times more specie than all the State banks put together, the increase in the State reserves was about equal to half of the increase in the specie reserves of the city of Mexico.

Below is given, in detail, the condition of all the financial establishments of the Republic, on the 30th of June, 1898:

# Cash, 1898.

The amount of notes issued by these banks of issue is so strictly regulated by law (see articles 16, 17, and 18 of chapter 2 of the banking law), that the expansion of the banks' currency in 1897-98 is not unfavorable, but is rather an excellent indication of commercial activity.

There are some interesting clauses in the concessions of the older banks that almost preclude a run on them. For instance, the fact that notes issued by a branch bank need not be redeemed at the home office, and that all payment of demands on the bank may be made in silver dollars by one man over the counter, so that the transfers could be made between branches and the home office in plenty of time to provide for emergencies. The great safeguard here, however, is the thorough supervision exercised by the Government and the confidence placed in the personnel of the banks by the community.

It is not the custom in Mexico, however, to deposit largely in banks, not from lack of confidence but because people keep their money in strong boxes, at home, or invest or spend it before they deposit it. The stamp tax on checks and drafts has much to do with this, and will doubtless be abolished from checks when practicable, so as to encour-

age the habit of using the banks for deposit.

From 8 down to 6 per cent is the usual rate charged, and only outside brokers and professional money lenders get more, and then on security that the banks would probably not accept, as they are very conservative and their rules have not varied much in many years, though the rate of interest has steadily decreased here, as elsewhere, with the increased security of life and property.

Bank directors here perform their work seriously, and every piece of paper offered for discount is carefully scrutinized, and few bad debts

are made, though payments are sometimes delayed.

All accounts are kept in Mexican currency, as, though much American money is used, the banks wish to make the profits on exchange both ways, and will not open gold accounts. For this reason, many persons settling here still keep account with banks in the United States.

The principal banks here keep accounts in New York, London, Paris, and Berlin, but seldom in other cities in the United States, and New

York exchange is the only kind easily salable.

This division of accounts is rendered necessary, as many of the merchants here are foreigners, and there are comparatively few American merchants, except in certain lines, such as bicycles and typewriters, although there are many American brokers and manufacturers' agents, and the railways are generally managed by Americans, and the class of American immigration is improving all the time.

## THE LAWS OF MEXICO.

Now that the eyes of investors and travelers are turned toward Mexico, one of the natural inquiries of persons that think of making this country their home is what protection they will receive and what are the laws that regulate the business interests of the country. In the commercial code of Mexico, now in general use throughout the Republic (copy of which I send),\* provision is made for most of the necessities of business, from organization of companies of various sorts to bankruptcy proceedings. As stated elsewhere, failures are very rare here, and the man that endeavors to profit by his business

<sup>\*</sup> Filed for reference in Bureau of Foreign Commerce, Department of State.

troubles is likely to suffer the penalties provided for such proceedings. A most careful scrutiny into his affairs for a long time back is made by expert accountants appointed by the court, and woe to the offender if any of his books are suppressed, altered, or in any respect deficient.

I have had many times to answer questions as to the value of contracts here, the main points of difference between American and Mexican law, to what extent precedents are given weight, and I shall endeavor to answer some of them in this report, and to conclude this portion of same with a few notes made by a noted attorney here, who has proposed them for this report, on some of the most interesting themes.

Contracts are of great value here, and they are prepared with much care, every point that either of the interested parties can foresee being provided for. This is rendered necessary by the fact that nothing is ever taken for granted in Mexican business dealings—nothing left to chance, nor are any precedents in analogous cases taken into account. Not even the supreme court of the nation publishes its decrees for reference. Each case is decided according to the law, and all laws are codified. The judge hands down his decision, based on his interpretation of the law governing the case in point, explaining the reasons for his decision with great minuteness. In civil cases, juries are never called, because it is usually the privilege of litigants to call for experts when they desire.

The training to be undergone by lawyers here before they are admitted to the Mexican bar is very strict. Eleven years of hard study is generally required, and it is rare, indeed, that any applicant seeks admission by reason of "sufficiency" of legal knowledge (as they do in the United States) in lieu of the customary time devoted to study, lectures, court practice, etc.

The scope of this report will not admit of my going beyond the space devoted to each department of the Mexican Government, so I shall not add more than the monographs prepared for this report at the request of the minister of justice of Mexico, except to say a word as to the "banda," or decree of the executive, promulgated at the close of the fiscal year 1897-98, which made a change in the laws regarding military service, and practically rendered the service obligatory, should the nation so require. Heretofore, many men called on to serve their country as soldiers have asked for "amparo," or protection, i. e., suspension of judgment and immunity from military service.

I feel that this report would not be complete without a reasonably full explanation of the excellent notarial system, so I herewith submit a short account of same, prepared by the well-known Mexican attorney, Francisco Alfaro:

I. The organic law of notaries and actuaries of the federal district divides them into notaries and actuaries. The first are established for the purpose of reducing acts, contracts, and testaments to a public instrument in those cases prescribed by law. The last named are public functionaries who authorize the decrees issued by judges, arbiters, and arbitrators, and who make all writings ordered in civil suits and in acts of voluntary jurisdiction.

and in acts of voluntary jurisdiction.

II. It is impossible for them to exercise the profession of both notary and actuary at the same time.

# REQUISITES FOR NOTARIES AND ACTUARIES.

1. In order to obtain the title of notary it is necessary-

(a) To have passed the studies ordered by the law of public instruction or be a

(b) To be Mexican by birth or naturalization (in this case the applicant must prove having lived for seven years in the country) and be in full exercise of his rights as a citizen.

(c) To be 25 years old.

(d) To have no physical impediment to the exercise of his profession and to have had no corporal punishment inflicted on him; to be of regular habits, constantly observing such conduct as to inspire the public with the confidence that is reposed in notaries by the nation.

(e) To prove his knowledge of law by the certificate of his examination and submit the reports of seven witnesses of well-known honesty, and who must be lawyers, notaries, or business agents, to certify that he is of regular habits, etc., and all other

requisites established by law.

2. In order to exercise the profession of a notary, it is necessary that the depart-

ment of justice should decree the "fist."

3. It is the exclusive privilege of notaries to authorize all kinds of public instruments in their "protocolos" (notary's register) in accordance with law.

#### NOTARY'S REGISTER.

This is a register or book in which the notary enters the first or original writing of the act or contract which he has before him, being the source from which all

copies for the interested parties are taken.

The registers are composed of books containing five "pliegos" (a pliego has 4 pages) put one inside of the other and sewn together, and the paper must have the pages) put one inside of the other and sewn together, and the paper must have the stamp prescribed by law. Only 40 lines are allowed on these pages, at the same distance one from the other, and with even handwriting. No spaces are allowed in blank, and all the acts or contracts reduced to public writing must be numbered consecutively. To this, are added the documents and proceedings forming part of it and necessary for it to be granted. The pages must be numbered, signed, and sealed by the notary owner of the register. The numbering must be in writing and in numbers, and the register must be closed every six months—that is, in June and in December of each year—the notary writing the number of instruments it contains and also the number of pages. He concludes by stating that he has not granted more in that period of six months, thereto putting the date, his seal, and signature, which is an indispensable requisite, so that the notary may open his protocol or which is an indispensable requisite, so that the notary may open his protocol or

register.

A notary can not issue instruments in the register of another notary, unless with the permission in writing of the superior tribunal, which tribunal can only grant it in case of sickness of a notary; if this is not complied with the responsible notaries are suspended in their profession for one year, and they must pay the damages caused, as all instruments granted by the notary who is not designated and authorized to do so according to law are null. The registers are bound every six months, and the instruments they contain must be detailed in an index in which are stated the number of the instrument and the number of pages on which it commences and The interested parties must sign in the index if they know how or can do so, but the instrumental witnesses and the notary must always sign, after having signed the register. Any contravention of this arrangement is punished by law, the former by suspension during three to six months and the latter by removal. If the documents are closed, this is noted in the register, giving the number under which they stand in the register, date of its granting, name of the witness and of the grantor. The notary must send copies of all public instruments to the judicial archives, and no one can inform himself of the contents unless by judicial order and for the purpose of comparing it with the register on petition of the interested party; the copies of the instruments must be sent under sealed cover, on which must be written that it is a testament, the name of the grantor, date of its granting, and number it has in the register.

When notaries issue copies of public instruments authorized by them, they must do so with their seal and signature, writing at the end and in the margin of the register the number of pages, name of interested party to whom it has been granted, and date. When notaries issue documents infringing the legal provisions, they will incur the punishment of suspension from office. If it results null on account of want

of legal requisites, they will be obliged to pay the damages and costs caused, besides undergoing the punishment imposed by law for other faults or crimes.

All protests of bills of exchange, drafts, and other mercantile obligations, through want of acceptance or of payment, must be made by notaries on the day following that they come due, before 6 p. m. unless it is a holiday. In this case, it will be made on the following week day.

All public instruments issued by notaries in accordance with law stand good in

case of suits or otherwise.

The notaries are so bound to keep the secrecy of all public instruments executed by them that the law punishes the notary who maliciously gives over to persons having no right thereto any document which should be private; or if he give a copy of it, or let them read it, he will be punished with two years' imprisonment and a fine of the second class if a third party is injured, or if the guilty party acted through motives of interest. In this last case, he will be obliged to return

Digitized by GOOGLE

what he received for his transgression, and this sum will be added to the fine. If the damage caused has not been of great consequence, he will be arrested for a period of eight days to six months, according to the opinion of the judge, and a fine of the second class will be imposed on him. Notaries can only authorize documents in the place conceded to them by the "fiat;" elsewhere, their acts have no value whatever. The general rules (besides that established by law) for documents or public instruments to be valid, are the following:

 Capacity to act of the contracting parties;
 Mutual agreement; and
 A licit object; that is to say, nothing contrary to law or good customs. Finally, the falsification of documents issued by notaries is punished by six years' imprisonment and a fine of from \$200 to \$2,000, besides removal and incapacity to again fill any other office or employment.

# COLLECTION OF CLAIMS OF FOREIGNERS.

## [Prepared by Francisco Alfaso, attorney at law.]

As the foreign press has spoken of a certain bond that is required from foreigners in Mexico, I wish to state that collections may be made either personally or by means of an attorney; but whether because some of the treaties with foreign friendly nations are incomplete, or whether on account of the reciprocity which governs international law when there are no treaties, or because the local law prescribes it, as, for instance, in the Federal District, the fact is that in Mexico there exists for foreigners the bond called judicatum solvi, sanctioned by the Parliament of Paris, required for the first time in Europe on the 4th of January, 1562, and known in Mexico ever since 1854. This bond is required in England and in some of the North American States. The judicatum solvi bond is required from foreigners in the tribunals of Mexico in case it is required from Mexicans in the United States, as, for example, in the State of Texas. Nevertheless, when the suit for the collection of foreigners' claims is instituted by an attorney, such a bond is not required. If up to now it has been exacted, it has been because no foreigner of the few from whom it has been demanded has applied to the supreme law or federal constitution, which is above all other laws and against all those who trespass against the rights of man. This law gives to foreigners the same rights as to Mexicans; consequently, the law demanding the judicatum solvi bond is anticonstitutional, and should not be complied with.

## The proceeding, therefore, is that established for mercantile suits.

## II. MERCANTILE SUITS.

These suits treat of and decide all controversies arising from commercial transactions. These can arise between regularly established merchants or between persons who from time to time, with or without a fixed establishment, should conduct any mercantile operation, provided they are legally competent according to the common laws on this subject. The law protecting commerce determines that persons under 21 years (the age of majority commonly established by law) and more than 18 can deal in commerce, after legal emancipation, majority of age being given them by the tribunals, or on authorization by those under whose guardianship or parentage they are according to law. The minor merchant can in no case enjoy the privileges and immunities conferred on minors; so that, as the law clearly determines it, "the minors who in accordance with the law are merchants are, nevertheless, considered as being of age." The commercial acts recognized by said law are:

I. All purchases, transfers, and leases executed or made for commercial speculation; all necessaries of life, articles of furniture, or merchandise, either in their

natural state or after they have been manufactured.

II. Purchase and sale of real estate, when they are made for the purpose of commercial speculation.

III. Purchase and sale of portions, shares, and obligations of mercantile societies. IV. The contracts relative to obligations of the nation or other representation of value common in commerce.

V. Companies of purveyors and providers.
 VI. Purchase of public and private buildings and works.

VII. Companies of factories and manufactories.

VIII. Transportation companies, either for passengers or freight, by land or by sea.

IX. Libraries, editorial and printing establishments.

X. Commission houses, agencies, commercial business offices, and establishments for public auctions.

XI. Establishments for public amusements.

XII. Operations of mercantile commissions. XIII. Intervention in mercantile business.

XIV. Banking operations.

XV. All contracts regarding maritime commerce and .nterior and exterior navigation.

XVI. All kinds of insurance contracts.

XVII. Deposits on account of commerce.

XVIII. Deposits in general warehouses and all operations made on warehouse certificates and obligations issued by the same.

XIX. Checks, bills of exchange, or remittances of money from one market to

another, between all kinds of people.

XX. Notes or other obligations to order or to bearer, and the obligations of merchants, unless it is proved that they arise from a cause entirely foreign to commerce.

XXI. Obligations between merchants and bankers, unless they are of a purely civil nature.

XXII. Contracts and obligations of merchants' employees, as far as regards the business of the merchants who employ them.

XXIII. Alienations which the merchant or cultivator may make on the products of his estate or his land in cultivation; and,

XXIV. Any other acts of a similar character to those already enumerated. In

case of doubt, the commercial nature can be decided by a judicial decree.

It is well to mention that when a commercial act is carried out, of the class specified by one of the contracting parties, and this contract should give rise to a suit, the proceedings will be carried on in accordance with the mercantile law, which is often more rapid than the civil suits, if the party executing the commercial act is the defendant. In the centrary case, the proceedings will be according to the stipulations of common law. The mercantile proceedings may be by agreement, being as short as the interested parties may desire; but otherwise they will be purely mercantile, and in the absence of laws applicable to the case the stipulations of the local law will be carried out. The mercantile suits according to law are:

Ordinary.

II. Executive.

III. Special bankrupt suits.

They will all be carried on by means of writings and petitions, and the suits for small amounts will be those in which not more than \$200 is concerned. The pleadings must have stamps affixed according to the stamp tax. In commercial matters, the law does not shorten or lengthen suits when treating of complaints against merchants, as it does not require the first notice to be personal. Consequently, if the defendant is not present or has no person to represent him legally, and the proceedings should be urgent or the delay prejudicial according to the opinion of the judge, the absent party will be represented by the public prosecutor. Nevertheless, if any person should present himself to defend the absent party, he will be admitted as "judicial attorney"—that is to say, as if he were an attorney—but in order to do this, he must give a bond guaranteeing that the interested party will agree to everything he does and will pay whatever judgment the court decrees, and all costs and expenses incurred. The bond will be passed upon by the judge in presence of the colitigant, and with no other appeal than that of his official responsi-The surety will renounce all legal benefits—that is to say, he can in no way oppose himself to the fulfillment of his obligations.

## III. PROCEEDINGS.

The first writing must be accompanied by-

I. The document or documents with which the litigant presents himself in the

suit, that is to say:

(a) If treating of a private individual or a merchant, the judicial power of attorney, mentioning whether it is general or special; in this last case, stating what is the business in question. The signature of the notary authorizing it must be legalized by the foreign functionary who may have power to do so, and in turn, this signature must be legalized by means of a certificate from the Mexican minister or any of the representatives or consuls of Mexico.

(b) If the plaintiff is a society, company, or corporation, the power of attorney given by the president or representative of said enterprise must contain, besides a declaration whether it is general or special and statement of the class of business in this last case, the insertion of the acts and relative part of the statutes which authorize him to do so; the act authorizing the representative of the company to give powers of attorney, and that part of the statutes referring to the exercise of this privilege. It must also contain a certificate proving the legal existence of the company or corporation.

(c) If the right which the party claims should proceed from any act of cession because the claimant transferred it to another person, said cession must be certified

by a notary, and it must be properly legalized in the same way as the preceding

(d) The judicial power of attorney thus strengthened must contain all kinds of powers to appeal to any of the tribunals of Mexico, with all the legalizations already mentioned. In case it mentioned only the certificate referring to the act of incorporation, it will be necessary to prove the legal existence of the enterprise with the legalization by the Mexican representative at the foot of said act. The stipulations contained in said power of attorney may be detailed as follows: "So that he may collect, demand, and receive what is owed to the grantor of the power; that he may reject witnesses, institute interrogatories (questions put to the colitigant under oath to tell the truth), make appeals, interpose the appeal of cassation and 'amparo' (protection or suspension of judgment), and in general do all that the laws allow, whether he exercises civil or criminal acts, in the proper case declaring the bank-ruptcy. He may also compromise, attach and name arbiters or arbitrators, giving all kinds of instruments, as well as all receipts for what he receives, as the grantor

declares that he agrees with everything his attorney may do."

II. If the right treated of is based on foreign laws, their existence must be proved in Mexico, as also that they are applicable to the case. The means for proof estab-

lished by law are:

 Judicial or extrajudicial confession;
 public and solemn instruments;
 judicial or extrajudicial confession; private documents; (4) expert opinions; (5) judicial inspection or investigation; (6) witnesses; (7) public opinion; (8) conjectures.

In Mexican law, there are precautionary stipulations protecting creditors of mer-

chants, and they can be appealed to:

(a) When there is reason to fear that the person against which a claim is made or is to be made will absent or hide himself.

(b) When there is reason to fear that the goods on which a claim is exercised will

be secreted or will deteriorate.

(c) When the suit is personal, always provided that the debtor has no other prop erties than those on which a claim is made, and there is reason to fear that he will hide or alienate them. These provisions affect not only the debtor, but also the partners and managers of foreign properties. The provisions to which I refer can be dictated as acts requiring previous judicial decision before the final judgment or after the respective suit has been entered, but the person demanding the precautionary decree must prove his right to act and the necessity for the protection he solicits. Said proof may consist of documents or the declarations of competent witnesses. These decrees will consist in the "arraigo" (the prohibition for the defendant to leave the place where the suit is carried on without appointing an attorney duly instructed and provided with the necessary expenses for the suit) and in the attachment of the properties belonging to the same defendant. In this last case, a bond is required. If the defendant does not obey the orders of the judge, he is punished by the penal authorities.

III. The proceedings allowed by law against sentences of first instance are appeal and cassation; ut the appeal can not be interposed when the business treated of does not exceed \$1,000; the "cassation" can be interposed against any judgment within the time fixed by law.

IV. After what I have above said, I must finish this report by giving an idea of the mercantile suits. There are two kinds—the ordinary and the executive suits. The first named requires that the ground for claim be presented, as well as the documents forming its bases. The defendant can interpose dilatory exceptions (those that serve to delay the answer to the claim) within the strict term of three days. If there should be opposition to this term for answering and giving proof, it can be extended to ten days, but no more, after which the allegations are made after the judgment gudgment. If there are no allegations, or if they are made after the judgment just spoken of, which is when the defendant must answer the charges, the evidence of the case should so necessitate it. The same also will be done if peremptory exceptions are interposed. The term allowed for evidence shall not exceed forty days, and within this time the judge can specify the time he considers proper. After this the proofs are published, even though some proofs are pending, as rogatory letters, to receive witnesses, etc. A term of ten days will then be allowed for each party to plead; after this time has passed, the judge calls the parties to hear judgment, which will be pronounced within fifteen days following this last notification.

The executive suit takes place when the claim is founded on any of the following documents:

Final judgment or unappealable arbitral judgment.
 Public instruments.

3. Judicial confession (made before the judge) answering interrogatories (which are questions on pertinent facts which must be answered before the judge on oath to tell the truth).

1000

4. Bills of exchange, drafts, notes, etc., and other commercial obligations spoken of in law. It is necessary that the signature be testified to before the judge, but this is not necessary in ordering the seizure of property of the acceptor.

Insurance policies.

6. The decision of the experts appointed to fix the amount of the damage done.

7. Invoices, current accounts, and any other commercial contracts signed and judicially acknowledged by the debtor.

When the claim is presented in executive suit, the judge orders the debtor to immediately pay, or his property is attached to such an extent as will pay the creditor the amount of his claim, as well as the costs, expenses, etc. Within three days after the attachment, the debtor can present his defense if he should have any exceptions to interpose. If this is done, the time for evidence will be fifteen days. At the end of this term, the judge orders the evidence to be made public, where the ht the end of this term, the judge oftens the evidence to be make purely, where the litigants may see it, and the papers in the case to be delivered for five days to each party so that they may make their answers. Eight days afterwards, the judge pronounces judgment. This judgment may decree the sale, by public auction, of the property attached, or that it does not belong to the executive suit, leaving the claimant free to appeal to the common suit. If the properties are to be sold by auction, they will be approved by brokers or experts, and a third expert will be appointed in case of disagreement. The first two will be appointed by the litigants and the letter by the index and the latter by the judge.

Finally, claims of foreigners can be collected in bankrupt suits. Regarding this,

nothing more can be said than that they are subject to the diminution of the amount owed by the common debtor, and the claims once secured by a provisional assignee appointed by the court, and the claims once acknowledged, there will be a final assignee, who will prepare a classification of claims which if accepted, will end the suit, and if not, there will follow a long suit. The rule is, the vote of a majority of the creditors to which the creditor who is not preferred must yield; if he is preferred, he must be paid in full. Some creditors, for instance, may recover the goods sold by them if the said goods are in bales or packages, so as to allow identification.

## LEGAL PROCEDURE IN MEXICO.

The tribunals of the city of Mexico are eight "minor courts;" five "civil courts;" five "correctional courts;" one "superior tribunal of the district," composed of four "departments;" two "district courts;" two "circuit tribunals;" the "supreme court of justice of the nation,"

divided into three "departments," and the "jury."

The minor courts try civil cases in which the amounts involved do not exceed \$500. Their judgments are not appealable, but they are "casable" (revocable on writs of error). The civil courts try all civil cases, whatever may be the amounts sued for, in excess of \$500, of the ordinary executive, summary, or commercial class, treating of interdictory verbal judgments or of the execution of the judgments of arbitrators; all this related to a contested jurisdiction. They have besides, the confessed or voluntary judgments which embrace provisional alimony, the declaration of the state; the appointment of guardians to whom are given certain powers; the appointment of a "curator," to whom guardians are accountable; the sale of property of those under age or incapacitated from acting and transactions pertaining to their rights, ad perpetuam information, the power to contract and appear as a party to a lawsuit, and to be able to give the consent of their relatives or guardians to contract matrimony. They have, besides contested and voluntary jurisdiction, a mixed jurisdiction, to which belong bankruptcy, either voluntary or involuntary, and hereditary and intestate suits.

The correctional courts try those misdemeanors and crimes which are not punishable with more than two years' imprisonment. Their sentences are appealable. They are to interpret law, and for that reason judge according to the proper law governing the case, which is the Penal Code.

The criminal courts try all crimes which call for punishment of more than two years, but the judges are to instruct the jury; and for

this, when the trial has been concluded, the accused is brought before the jury to declare whether he is guilty or not guilty, and with aggravating or extenuating circumstances. Then, the judge of instruction assumes the power of pronouncing the sentence, acquitting or condemning the accused, according to clear and precise rules which are clearly established in the Penal Code. His sentences are appealable and "cassable," since appeal and "cassation" are ordinary resources.

The judges of the correctional as well as those of the criminal courts can give liberty on bail, according to the provisions of the Code of Penal Proceedings, and can give absolute liberty to the accused, if during the hearing of the case the evidence or cause disappears which has brought about the order of formal imprisonment, which must be rendered within seventy-two hours from the time the accused has been at

the disposal of the court for the preparatory declaration.

The term of seventy-two hours can not be extended, according to the federal constitution; and after this period, if the accused has not been given his liberty, not having the decree of formal imprisonment pronounced against him, the judges and wardens of the prison in which the individual is detained without the formality mentioned—i. e., the decree of formal imprisonment, which is appealable—incur a criminal responsibility. The superior tribunal, divided into four departments, as already said, conducts the recourse of appeal and "cassation" (appeal by error) thus: The first department is composed of five magistrates, who try the recourse, "appealed by error" being interposed against the decrees of the minor judges of the federal district or against the decrees that pass on the recourse of appeal, even if these judgments are pronounced in the federal district or in the territories.

These decrees are pronounced in the federal district of Mexico by the third and fourth departments, in civil matters, and by the second department in penal matters, since these are the ones who revise the decrees of the judges to whom I have referred, if the recourse of appeal is brought before them. The recourse of appeal by error is opposed against a decree pronounced by the three departments of the superior tribunal for violation of civil and penal law and by violations of civil and penal proceedings law, and is tried by the first department. The four departments of the "pleno tribunal" (tribunal complete) decide upon the petitions for provisional liberty of criminals, and dictate the measures that are found necessary for the judges to comply with their

obligations, to assure the speedy administration of justice.

In relation to the district judges, it must be stated that they have mixed jurisdiction; they try all matters in which the federation forms a part or is interested, and consequently, they also try any defalcation with which a Government employee is charged, or any crime committed by a railway employee, of counterfeiting money, of outrage upon the representatives of foreign nations, as well as civil suits in which the Federal Government is the actor reus or opponent. They have jurisdiction over extradition cases and those treating of marine rights; but the great power they have besides is to try the suits of "amparo" (protection), suspending any act of any authority violating the rights of man guaranteed by the federal constitution. Consequently, they protect all that live in Mexico, whether Mexican or foreigner; suspend an order of a judge, of the superior tribunal, of a governor, or of the President of the Republic, if he violates any rights guaranteed by the constitution, as also they can protect against any law given by a congress of a State, or by the congress of the union, composed of the Chamber of Deputies and Senators, if it is contrary to the federal constitution.

The suspension of judgment can be decreed before the final hearing of the case, but this and the judgment they pronounce is subject to revision by the supreme court of justice of the nation, before a complete tribunal, in which the president of the court has the right to give a double vote in case of equality, which decides the case. The circuit tribunals try cases appealed by persons that deem themselves injured

by the decrees of the district judges.

The supreme federal tribunals are competent to pass on the decrees of the circuit tribunals; and if there is interposed against them the recourse of "suplica" (old Spanish recourse corresponding to appeal by error), such "suplicas" are examined by the second and third departments, in turn, of the supreme court of the nation. They try, as tribunal of appeal, controversies that are based upon the application of and obedience to the federal laws, in which the federation might be interested; controversies between two or more States of the same federation; those between one State and one or more residents of another State; suits relating to civil or criminal procedure that are a consequence of contracts made with a foreign power; cases concerning diplomatic agents and consuls. The same superior court of justice tries from the first instance those controversies that occur between one State and another and those to which the nation might be a party. It also solves the questions of jurisdiction that arise between federal tribunals, between these and those of the States, or between those of one State and those of another.

#### EXTRADITION.

A matter that has excited much interest among both Americans and Mexicans is the uncertainty about the extradition treaty between the two countries, and for this reason I here give the Mexican law:

> EXTRADITION LAW OF MEXICO.\* [Promulgated May 19, 1897.—Translation.] CHAPTER I.—Of extradition cases.

ART. 1. Extradition shall take place-

I. In the cases and manner prescribed by treaties.

II. Should there be no international convention on the subject, according to the

prescriptions of this law.

ART. 2. Extradition can only be granted by virtue of international offenses of an ordinary nature in their four degrees of punishable attempt, criminal attempt, frustrated offense, and consummated offense, as defined in the Penal Code of the federal district of Mexico, and which may not be comprised within the following exceptions:

I. Acts which are not punishable in the State that may demand the extradition. II. Acts which can only be punished by fine or imprisonment up to one year in the

federal district of Mexico.

III. Acts which in conformity with the law of the State making the demand inflict no greater punishment than a fine, exile, or imprisonment for the term of one

IV. Acts which can not be prosecuted in the federal district of Mexico by the public prosecutor, except by virtue of an action commenced by the real party

injured.

V. Acts which are no longer punishable owing to prescription of the action or of the punishment in conformity with the Penal Code of said district, or with the appropriate legislation of the state making the requisition.

VI. Acts which may have given rise to the acquittal, pardon, or amnesty of the accused, or in reference to which the term of punishment may have expired.

VII. Offenses committed within the jurisdiction of the Republic.

ART. 3. The principal parties guilty of any of the offenses which may warrant an

<sup>\*</sup> Note by Bureau of Foreign Commerce, March 30, 1899. The extradition treaty with Mexico expired in January, 1899, and a new treaty is now pending ratification.

extradition, their accomplices and abettors, are the only persons who may be surrendered in conformity with this law.

ART. 4. I. The state making the requisition must prove-

A. That the offenses stated in Section II of this article, their motives or purposes, even if considered as aggravating circumstances, shall not be the subject-matter of the prosecution proceedings, unless the defendant shall voluntarily consent to be tried for such offenses, or if having remained within the territory of said State for more than two consecutive months, in perfect liberty to leave it, he should not avail himself of that right.

B. That the accused shall be brought to trial before a competent court, established by law before the commission of the offense with which he is charged, and that he

shall be tried and sentenced in due course of law.

C. That he will be heard on his own behalf, and that all legal resources shall be

accorded to him, even when already condemned through nonappearance or default.

D. Lastly, that the extradition of the same defendant shall not be granted to another State, but in the exceptional cases specified in subdivision A, Section I, of this article.

II. The offenses to which said subdivision A refers, are-

A. Acts committed prior to the extradition, omitted in the petition, or having no

relevancy to those specified therein.

B. Offenses of a religious, political, or military nature and those constituting smuggling, even though connected with the common offense that may have given rise to the extradition; it being understood that smuggling consists in the importation, exportation, or traffic of merchandise in contravention of the fiscal laws.

ART. 5. The Executive of the Union may grant a new requisition made by the state that may have obtained the extradition, in order to have the defendant surrendered, tried, and punished in conformity with this law, for an offense not included within the terms of the prior requisition; but in such a case, the proceedings set forth in this law shall be observed as far as it may be possible.

ART. 6. Should there be proceedings pending or a judgment outstanding in this Republic against the defendant demanded, for an offense of a different nature to that which gave rise to the requisition, his extradition, if legal, must be deferred until such defendant shall have been acquitted or shall have undergone his sentence.

ART. 7. If the extradition of the same person be demanded by two or more states and if legally it ought to be granted to all or any of said states, the defendant shall

be surrendered-

To the state demanding him in conformity with an international convention.

II. Should several states claim the extradition by virtue of international conventions, then to the state in whose territory the offense may have been committed.

III. When said circumstances shall concur, then to the state that may demand the

defendant for an offense deserving a more severe punishment.

IV. If any other case, to the state that first may have duly made its requisition, or if there is any doubt as to priority, then to the state that the Executive may designate.

ART. 8. The state to whom the extradition of an individual shall have been granted may surrender him to another state that may have already made its requisition in conformity with this law and has not succeeded in obtaining the preference in

conformity with the foregoing article.

ART. 9. Whenever the extradition of a defendant shall have been granted, no further steps must be taken regarding any requisition made by another state for the surrender of the same person, unless such person shall return to the Republic after the extradition granted may have produced its effects.

ART. 10. I. The extradition of criminals who may have been slaves in the country

where they have committed the offense charged shall not be granted.

II. No Mexican shall be surrendered to a foreign state, save in cases considered

exceptional by the Executive, who may so determine.

III. Persons naturalized in the Republic shall be surrendered to a foreign government claiming them, if their extradition is asked within two years after the time

when they became naturalized.

ART. 11. Whenever the extradition of a Mexican demanded in consequence of an offense committed by him in a foreign territory, and included in article 2 of this law, shall have been refused, the Executive of the Union shall refer his case to a competent court of the Republic, so that he may be tried therein, if possible according to law.

## CHAPTER II.—Of the proceedings.

ART. 12. Applications for extradition shall always be made through the diplomatic channel.

ART. 13. In cases of urgency, the provisional arrest of the defendant shall be granted by the Executive of the Union upon request therefor made by post or tele-

Digitized by GOOGIC

graph, which must state the offense charged, give information that the order for the imprisonment of the accused has been issued by a competent authority, and contain a promise of reciprocity and of presenting the requisition with proofs of law and

fact upon which it is based.

ART. 14. If within a reasonable time fixed by the Executive of the Union, to be made known to the state making the requisition, and not exceeding three months, the requisition is not presented to the department of foreign relations, the prisoner shall be granted his absolute freedom, and he shall never again be arrested on the same charge.

ART. 15. I. If the request for the arrest of the defendant and the requisition of extradition shall comprise the seizure of documents, money, or other articles that may be in the possession of the accused, the same shall be retained and deposited with an inventory thereof by the agents of the Government, all of which shall be delivered to the state demanding them, should the extradition be granted in its favor, or they shall be returned to the defendant if he is set at liberty.

II. Nevertheless, the right to the articles seized of a third party not implicated in the charge shall not be affected in any way.

ART. 16. The documents that must be furnished with the requisition:

I. Must prove the existence of the corpus delicit, and furnish evidence of the identity, and at least presumption of the guilt, of the person whose extradition is demanded, in such manner that his arrest and prosecution might be ordered in conformity with the laws of the Republic, had he committed the offense within its territory.

II. They must produce, as far as relevant, the text of the foreign law referring to the offense and to the punishment applicable thereto, with a duly certified statement to the effect that such law is in force, and must contain a copy of the judgment or sentence, if the latter had been rendered.

III. They must be legalized, so that their authenticity may be duly proved.

IV. If drawn in a foreign language, a translation of the same into Spanish must be furnished.

ART. 17. I. When the requisition shall have been received, such requisition with the documents accompanying the same shall be sent to the district judge within whose jurisdiction the defendant may be found.

II. If the residence of the defendant is not known, the requisition for his extradition with the documents relative thereto shall be sent to the corresponding (ex turno) district judge in this capital, who will be the only one competent to hear the case, whatever the place may be where such defendant is discovered.

III. Whoever may be the district judge to whom the requisition for extradition

is referred, no challenge or recusation for the proceedings shall be allowed.

ART. 18. The petition of the foreign government and the order for the defendant's arrest issued by the department of foreign relations, in conformity with the provisions of this law, shall legally justify the district judge in issuing an order for the confirmation of the imprisonment of the defendant

ART. 19. For the purpose of having the arrest effected, the judge shall have the right to issue direct orders therefor to the political local authorities of the district,

Territories or States of the Union.

ART. 20. When the arrest shall have been effected, the district judge must make the defendant appear before him, and after informing him of the requisition and documents annexed thereto, must allow the following defences only:

I. That the requisition is contrary to the provisions contained in the treaty mentioned therein, or in this law, if no treaty be in force.

II. That the defendant is not the person whose extradition is asked.

III. That the extradition is illegal, because if granted, some one or more of the rights secured to all persons under the constitution of the Republic shall be violated.

ART. 21. I. Such defences may be alleged by the defendant or by his legal repre-

sentative within the period of three days, and proofs to sustain the same must be presented within twenty days thereafter, sufficient time to be further allowed for the transmission of mails.

II. Within the same time, the prosecuting attorney shall present his proofs, and such officer shall always be a party in the prosecution of all judicial proceedings in

extradition cases.

I. When the time allowed for the presentation of proofs shall have expired, the judge must set a day for the hearing of the pleadings of both sides within a term of five days, and without any further proceedings shall, within three days thereafter, set forth his opinion as to whether the extradition should be granted

II. The judge shall on his own motion pass upon the defences stated in article 20, even if not alleged by the defendant, and furthermore must decide in every case whether the act which gives rise to the requisition should be examined and tried by the authorities of the Republic.

ART. 23. The terms mentioned in articles 21 and 22 are peremptory, and can not be suspended or extended, excepting through the action of vis major.

ART. 24. The judge shall close the proceedings with an order stating that the arrested defendant is at the disposal of the department of foreign relations, and the record shall thereupon be forwarded to such department. The judge shall have said order served upon the officer in charge of the prison, so that it may have its full force and effect.

ART. 25. Upon receipt and examination of the judicial record, the Executive of the Union shall determine whether the extradition is to be granted or denied, and the said Executive shall have the power in any case to decide differently from the

judge's opinion.

ART. 26. I. If the decision should be against the requisition, the officer who may have the prisoner in charge shall be duly notified, and he shall set the defendant at

II. If the Executive should grant the requisition, his decision shall be made known

to the prisoner or to his legal representative.

ART. 27. I. No other remedy is given against the decision granting an extradition excepting the writ of amparo 1 from the federal judiciary, as prescribed in article 102 of the constitution, and this proceeding will only be available if resorted to by the defendant or his legal representative within the period of three days after the notification of the Government's decision, such time not to be extended in any event.

No remedy for the other judicial or administrative decisions or proceedings can

be allowed.

ART. 28. Any petition for the writ of amparo shall at once be dismissed if pre-

sented after the period stated in the foregoing article.

ART. 29. After the time granted for the repetition of that writ has elapsed, and the defendant or his legal representative shall not have asked it in due form, or if the writ of amparo shall have been denied by the supreme court of justice, the department of foreign relations shall notify to the agent of the foreign state the decision favorable to the extradition, and shall order the prisoner to be delivered up

to said agent.

ART. 30. If the foreign state shall allow the period of two months to elapse after the time when the prisoner was placed at its disposal, without taking him out of the country, such prisoner shall regain his freedom; and he shall not be again arrested or surrendered to the same state by reason of the offense that gave rise to the requisition.

ART. 31. I. The extradition may be carried into effect by the aid of the Govern-

ment officers, if so asked by the state having obtained such extradition.

II. The intervention of such officers shall cease, as the case may be, at the frontier line, on board of the vessel receiving the prisoner, or at a place in the interior of the country, where the extradition agent of such state shall take the defendant on his own responsibility.

### CHAPTER III.—Supplementary proceedings.

ART. 32. I. No extradition shall take place without the authority of a treaty, unless the government demanding it shall promise strict reciprocity and full compliance with the other requirements contained in this law.

II. The Executive of the Union may make a similar promise whenever a foreign state shall require it, in order to grant an extradition which may not be obligatory

under the provisions of international agreements.

ART. 33. The department of foreign relations shall make known the provisions of this law to the departments of foreign affairs of the other countries, and shall always send a copy of the same with the note communicating that the extradition was granted.

ART. 34. All expenses incurred by reason of any demand of extradition may be made by the federal treasury on account of the foreign government who shall have presented such demand, and said expenses shall be collected from that government

even if the extradition is not granted.

ART. 35. I. The courts of Mexico when demanding an extradition of persons gainst whom criminal proceedings are pending therein, as well as the governors of the States of the Union who may ask the extradition of fugitives from justice delivered to the Executive to serve their terms of sentence, shall comply with the provisions contained in articles 1, 2, 3, 12, and 16 of this law.

II. The provisions of art. 34 regarding a foreign government are applicable to that

of a Mexican State, whenever they ask for an extradition.

ART. 36. The Executive of the Union shall endeavor to embody in all extradition treaties that it may negotiate hereafter, all the benefits and cautions referred to in this law.

<sup>&</sup>lt;sup>1</sup>Protection. Redress for a wrong made to the applicant by any authority, implying violation of any right of man sanctioned by the constitution.

### FOREIGN DEPARTMENT.

At my request, the minister of foreign relations of the Republic of Mexico, Ignacio Mariscal, has been good enough to prepare the following memorandum of this branch of this Government, which may be of

The department of foreign relations is under the direction of a secretary of state, assisted by an under secretary or chief clerk, and is divided into five bureaus, namely:
1. Bureau of America, Asia, and Australia, which deals with all matters having

political relations with those continents.

2. Bureau of Europe and Africa. This has the same character as the preceding in all matters concerning our relations with those two continents.

 Chancellery bureau, a registering and recording office.
 Consular bureau. This deals with all matters pertaining to the consular service not included in the above bureaus.

5. Archives and library. This takes care of the library belonging to the department and keeps all the files of the office that are not in actual use.

Annexed to the department of foreign relations is the office known as "the public archives of the nation," a bureau that keeps all the land deals that have been recorded from the beginning of the colonial period up to the year 1821; also a record of political and historical events belonging to that period. In recent years, all Mexican periodicals have been sent to this office, where there are kept complete files

of all journals that have been published in Mexico.

The diplomatic corps contains the following grades: Envoy extraordinary and minister plenipotentiary, minister resident, charge d'affaires, first secretary of legation, second secretary of legation, third secretary of legation, attachés, all appointed by

the President; the ministers approved by the Senate.

The traveling expenses for this personnel are as follows: For a minister, 30 cents a kilometer (0.62137 of a mile); chargé d'affaires, 25 cents a kilometer; first secretary, 20 cents a kilometer; second secretary, 10 cents a kilometer; third secretary, 10 cents a kilometer.

The consular corps is appointed by the President, the consuls-general subject to the

approval of the Senate.

The consular service is filled by consuls-general, consuls, vice-consuls, commercial

agents, and chancellors

There is no limit as to the time of service, nor any restriction as to nationality. However, the most important places are filled by Mexican citizens, either sent from Mexico or chosen among residents of the city where the office is established.

In general terms, the department of foreign affairs, through its legation or consular officers, attends to Mexican sailors or those who, destitute of resources, wish to return to their native country, provided their condition of extreme poverty is not due to any improper cause.

Promotions among the personnel of the department occur after an examination by a jury formed of the chiefs of bureaus. To these examinations are admitted any

persons that wish to enter, though they may not belong to the department.

Among the personnel of the department there is a society for mutual aid. death of each member his family receives the sum of \$400. Besides, the department grants a month's salary of the deceased.

All the personnel of this department may enjoy each year a vacation of fifteen days. The office hours are from 8.30 a. m. to 2.30 p. m.

To the boys who are employed as "meritorios" are given classes of penmanship, French, and English by professors paid by the department. These classes are given in the morning, before the busy hours of the bureau begin.

The department publishes a monthly bulletin containing all matters that refer to

this branch of the public service.

The appointees for consular offices are usually, when practicable, men that have been trained in the department, and are selected because of their fitness for the position. The system of competitive examinations has not been established by law, but by the personal initiative of Mr. Mariscal, and the office is well conducted in the full sense of this term.

#### EDUCATIONAL SYSTEM.

The following was prepared, at my request, by the minister of justice and public instruction, Lic. Joaquin Baranda, and may prove of interest:

Instruction in Mexico is imparted in the following institutions, all of which depend directly upon the department of public instruction:

Depend upon the general director—Kindergarten, from 4 to 6 years; primary obligatory, four years, from 6 to 12; primary superior, two years, from 12 to 14. Upon the board of directors—Preparatory, four years, from 14 to 18; professional schools—law, medicine, engineering, mines, etc.

#### PRIMARY INSTRUCTION.

The new law of compulsory education dates from June 3, 1896. This law created the general direction of public instruction, for the management of the schools of the federal district and territories.

Before this date, the education of the people was in the hands of the General Government and of the board of aldermen of every city and town. These boards appointed a committee of one, two, or three members for that purpose, and as this board is elected every year, the new and more enthusiastic members brought to the educational field new ideas, programmes, methods, and changes in the personnel of the schools; this constant change naturally unsettled all progress.

Since the establishment of the general direction, there has been a great development in the system of public schools; their condition has improved, and moreover

the teaching force is superior, through the preference given by the Government for

the best positions to the pupils of the normal schools for young girls and boys.

Organization of city and country schools in the federal district.—The management of the school system is under the general direction of public instruction. Its object is the school system is under the general direction of public instruction. Its object is to extend public primary instruction under an equal plan, both scientific and administrative. Its members are appointed during good behavior and efficiency by the President of the Republic through the minister of public instruction. The personnel of this general direction is formed of the following officers: General director, Dr. Luis E. Ruiz, \$5,000; secretary, Manuel Cervantes Imaz, \$2,401.75; first officer, J. M. Rodriguez y Cos, \$1,803; second officer, Gregorio Torres Quintero, \$1,500; third officer, Eliseo J. Granja, \$1,500; medical inspector, \$1,200 to \$1,500; there are basides six inspectors of schools at \$1,803 each; inspectors of special branches are, besides, six inspectors of schools, at \$1,803 each; inspectors of special branches, such as music, drawing, gymnastics, manual labors, \$1,000; employees in charge of the compulsory education, \$602.

The duties of the general direction of primary instruction are the following: To direct the scientific march of education, taking care of the exact compliance

of the laws and relative by-laws.

To act as advisory counsel, and to report to the minister of instruction in all matters relating to primary education.

To give to the teachers all information in relation to principles and methods of teaching, in accordance with the best pedagogical doctrines adapted to the official programmes.

To act as inspectors of the examinations of the public schools and private schools that have accepted the legal programmes, personally or through representatives

To take the greatest interest in the education of Indians, suggesting to the Government the best means for that purpose, especially in the rural parts of the district and territories

With the help of the political authorities, to oblige vagrant children to submit to compulsory education, and indicate to the Government the best means for that end. To form the statistics of public instruction.

The powers and duties of the general director are:

To present to the minister for resolution all subjects in relation to primary education.

To give orders to the inspectors, principals, and teachers for the best service of the schools.

To prepare every month, after the report of the principal of the school, the schedule of expenses, and to provide the school with furniture, apparatus, libraries, etc., in accordance with the indications of the minister of instruction.

To appoint a board of inspection for compulsory education for the different wards and towns and direct their organization.

To propose to the department of instruction the appointment, promotion, dismis-

sal of all employees of the general direction and of the schools. To promote the association of teachers for the purpose of studying all questions

in regard to the improvement of teaching methods.

To personally inspect the schools for the supervision of methods and teaching, discipline, and hygiene.

To be in communication with all centers of education of the States of the Republic and of foreign countries.

To impose a fine on all persons in charge of children, who do not comply with the law of compulsory education.

To settle all disputes between teachers and parents.

To grant leave of absence for fifteen days, to suspend without salary for a month or less, and to fine the employees of the general direction and of the public schools.

To change the location of the schools.

To establish relations with the States of the union.

To endeavor to establish throughout the union a uniform conventional system of

instruction, based on the fundamental principles of primary instruction.

To report to the minister of public instruction annually on the actual state of primary instruction, with the reforms that in the judgment of the general direction ought to be made, the result of the examinations, works of the teachers, material improvements, etc., of the schools.

To annually present a project of expenses for the next fiscal year.

To keep a record of the fulfillment of their duties by the teachers, for the granting of pensions, which are given after thirty years of service. If the professor desires to continue his services, his salary is doubled.

According to the federal constitution, every State directs its system of education according to the relative article of the constitution. Instruction throughout the

whole Republic is gratuitous and obligatory.

In none of the schools of the nation are the professors allowed to treat of religious subjects or to teach any religion. Parents who desire their children to receive religious instruction are obliged to intrust their children to professors directing parish schools or those established by the clergy, or else send them to private schools, which are mostly Catholic. All of these schools must be inspected by a representative of the general direction, and adapt themselves to the legal programme.

Pupils of all schools (private or public) and those who receive education at home are obliged to pass an examination before the representatives of the general direction every year. If the parents fail to comply with this requisite, they are fined from \$1 to \$5, or suffer imprisonment if they do not pay. They are also fined or imprisoned if their children do not attend school. Compulsory education is for

children from 6 to 12 years of age.

The owners of factories or farms are forbidden to receive children under 12 years, unless they show a certificate proving that they have finished their compulsory education. They may receive them outside of ordinary school hours, or establish a school where they may receive instruction for three hours daily. In case of resistance, the owner will be fined from \$2 to \$5 for the first time, and in case he again disobeys, from \$5 to \$10.

In the little towns where it is not possible to establish two schools, the teacher receives the boys in the morning and the girls in the afternoon, or vice versa.

The President of the Republic appoints all teachers.

There are two schools for every 4,000 inhabitants—one for boys and one for girls. A school generally has 4 teachers, each having under his charge 50 pupils. In all elementary schools, the tuition, school books, and accessories are free.

Every year, the children are examined during the month of November. The distribution of prizes is made by the President of the Republic, there being eight prizes for every primary superior.

prizes for every elementary school and twelve for every primary superior.

The constitution forbids all kinds of corporal punishment, and the constitutions

of the schools also forbid all degrading punishments.

In the primary schools, nearly all branches are taught in oral lessons, very few hours being devoted to book study and to recitation. The object is to avoid

mechanical processes.

According to the last census of the federal district, the population is calculated at 484,608. There are about 75,000 children from 6 to 12 years old in the federal district. In 1897, 51,606 pupils were registered in the official schools. This is about 10.56 per cent of the population. The mean attendance was of about 25,716 pupils. There are 214 days of school during the year. Every year, \$517,754.35 are spent in salaries of professors. Men and women teachers receive the same salaries. There are 325 schools in the district depending upon the general direction; 35 per cent are men teachers and 65 per cent women. The total expenses, excepting salaries, amount to \$222,548.75; \$1.52 is spent annually per inhabitant and \$28.79 annually per pupil, 13 cents being spent per pupil per day.

The salaries of teachers of superior instruction are as follows:

	Outside of city.	In the city
Principals of superior instruction	\$1,000.00	a\$1, 200. 85
Assistant teachers of same		602. 25
French		803. O
English	481.80	803.00
Music	481.80	602, 00
Drawing	481.80	302.95
Gymnastics and military exercises	484.80	481.80
Manual work for bove		602. 25
Manual work for girls	240.00	302.00
Schools of compulsory education:	1	
Principals	481.80	781. 10
Assistants	302.95	481.80
Schools for both sexes:	1	1
Principals	l	660, 78
Assistant teachers		423.40

a Mexican currency, valued January 1, 1899, by the United States Director of the Mint, at 47.7 cents.

The principals and assistants of the primary schools established in the 1,100 normal schools have salaries as follows:

Director	\$1,500
Subdirector	
Assistants	

Nearly all the teachers in the normal school for young ladies receive the same salaries as those of the normal schools for young men, excepting the lady director, who receives \$1,500.

Normal for male teachers: The following professors get a salary of \$1,200 a year for an hour each on an average, for lectures or practical exercises: Spanish language, history, civics and political economy, mathematics, natural philosophy and chemistry, natural history and objective teaching, physiology, hygiene and medicine, geography and astronomy, drawing and penmanship, psychology, logic and morals, school management, woodworking, and ironworking.

Assistant professors for laboratory work of experimental sciences and professors

of French and English receive \$803, and the professors of gymnastics and military exercises receive \$602.25.

In the federal district, the public-school system is absolutely emancipated from partisan politics and religious questions, and is, besides, disassociated from municipal The Government appoints the best men, regardless of their nationality, politics, religion, or local tendencies.

The salaries of primary teachers have improved a great deal. In the city, a few teachers have seen their salaries curtailed in order to obtain uniform emoluments.

The law forbids that a person may have more than one position in public service, with the exception of the employees of the department of public instruction, who may hold two. For instance, the director of the normal school and five professors are actually members of congress, with a salary of \$3,000 besides what they get as professors.

Competitive examinations are held only in a few professional schools, such as those of medicine, commerce, etc. In the primary schools, academical knowledge and actual ability, in the judgment of the director, are what determine the promo-

tion of the teachers.

Teachers are exempt from all duties that may interfere with their services, such

as service in the army, on the jury, etc.

Programme of studies.-Spanish (reading and writing), arithmetic, outlines of natural philosophy, natural history (objective teaching), practical geometry, drawing (of simple natural objects), singing, gymnastics, military training for boys, manual work for girls. The scholastic year is composed of two hundred days, five days in each week.

The primary superior instruction is the bridge between elementary and preparatory

branches.

The studies are morals, civics, and law notions, Spanish, French, and English, arithmetic, algebra, and bookkeeping, physics and chemistry and natural history, physiology, hygiene, domestic medicine, geometry, universal geography, geography of Mexico, universal history, history of Mexico, ideas of political economy, manual work for boys, domestic occupations for girls, mechanical and ornamental drawing, caligraphy, singing, hygienic exercises, military drill. This programme is carried out in four courses of six months each.

Every Thursday, the pupils have school excursions so as to form scientific collections, visit factories, mines, farms, and admire works of art and lovely landscapes. The coeducation of both sexes is very rare, and is only used in Protestant schools or those whose lack of population does not permit separate schools for both sexes.

In the preparatory and professional schools of law, medicine, etc., young girls are

allowed to enter with the same rights as young men.

As yet, the direction has not established a systematical anthropological examination of children, in order to decide which children ought to go to schools for feeble-minded children, and for the formation of classes where the classification depends on the different degrees of development.

### OTHER SCHOOLS AND INSTITUTES SUPPORTED BY THE GOVERNMENT.

Preparatory school for all professional careers; school of jurisprudence; school of medicine; anatamo-pathological museum; academy of medicine; superior school of commerce; school of fine arts; conservatory of music; school of arts and industries for bys; school of arts and industries for girls; school of engineers and mining; practical school of mines (in Pachuca); school of agriculture and veterinary; national museum; national library.

Those pupils of the schools who excel and can not support themselves, receive pensions from the Government until they finish their education. Some of them are sent to foreign countries, to improve their knowledge, at the expense of the Government. The College of the Vizcainas is subsidized by the Government with \$18,000, and

The College of the Vizcainas is subsidized by the Government with \$18,000, and the Society of Natural History with \$1,000; the Government also prints useful books

when the author has not the means to do so himself.

Panper and criminal children receive education in the poor asylum and in the correctional school. There are also schools established in the prison of Belen. There is a school for deaf and dumb, asylum for the blind, military academy, society of geography and statistics, medical national institute, and geological institute.

I must say a few words regarding the extensive work now being done at the ports, the completion of which means so much in the substantial increase in the trade and consequent prosperity of this Republic.

The outer works in the Vera Cruz Harbor improvements are almost concluded, and the metallic pier, 180 meters (196.2 yards) in length by  $22\frac{1}{2}$  meters (24.5 yards) in width, has been completed.

Work on the new custom house building at Tampico continues, as well as on the protecting embankment on the right side of the Panuco River.

At Coatzacoalcos, the bar has been cut by means of a canal 8½ meters (9.2 yards) in depth between tides, and of a width sufficient to afford easy entrance to large vessels.

With the exception of a few details, the Government pier at Frontera is completed.

The breakwater at the port of Santa Rosalía has been completed for a distance of 400 meters (436 yards).

At Mazatlan, work has been prosecuted on the construction of the Olas Altas sea wall, and a strengthening embankment has been formed behind it.

# COINAGE.

I here submit a translation of the regulations for the collection of the coinage, stamp, refining, smelting, assay, and parting dues, which the revenue laws levy on precious metals and mineral substances containing the same; also a translation of the law relating to the weights and measures of Mexico.<sup>1</sup>

# POSTAL STATISTICS.

The earnings of the postal department during the fiscal year of 1897-98 were \$1,409,528, being an increase of \$62,366 over those of the preceding year. The postage stamps sold in the year 1894-95 (which was the last in which the interior rate for letters was 10 cents) amounted to \$1,300,905, while the sale during the year 1897-98, under the new rate of 5 cents, amounted to \$1,309,570, thus showing that in the space of three years, the amount of correspondence has doubled.

The dealings in postal drafts increased during the last fiscal year by 31½ per cent over the previous year, the amount being \$1,212,217.

During the fiscal year 1897-98, 8 new local offices, 2 branches, and 55 agencies were established. Ten offices were authorized to handle postal packages, and 174 were empowered to issue and pay postal drafts. The ambulatory railway service was introduced on some new sections of the Mexican National, on the Hidalgo Railway, and on the Peninsular Railway of Yucatan.

<sup>&</sup>lt;sup>1</sup> Filed for reference in the Bureau of Foreign Commerce, Department of State.

The amount of correspondence handled during the last fiscal year was, according to data furnished by the department of statistics and unclaimed letters, 86,700,000 pieces in the inland service, and more than 26,000,000 in the foreign service.

### TELEGRAPH LINES.

During the last fiscal year, a number of new telegraph offices have been opened to the public. A new line has been strung between Esperanza and Tehuacan, and the lines between Banamichi and Arizpe and Teapa and Pichucalco have been incorporated into the federal telegraph system, having previously belonged to the States of Sonora and Chiapas, respectively.

The substitution of copper for iron wire in the eastern section of the

Republic has continued.

A general map of the telegraph system for technical and managerial purposes having become a necessity, one was ordered to be made by the Mexican Government, and it has now been completed. This map is of great utility not only to the management but to the public, as it gives an accurate idea of the present state of the communication facilities by electricity in the Republic.

The advantage of constant telegraph service has been extended to thirty-six more towns, thus increasing the earnings from this source. The total number of messages sent over the lines in the fiscal year 1897-98 was 2,086,050. During the half year from January to June, 1898, there was an increase of 24 per cent over the same period of last vear.

The interior press service, which practically amounted to nothing a year ago, is now of considerable volume, and it may be said that its existence is now assured.

On April 1 last, the service of telegraph drafts was inaugurated and operations of this line are on the increase, amounting, as they do, to \$150,000 per month. It is expected that in time, this service will become of the greatest importance.

The shops which are now fully installed supply the federal lines with a good many articles and apparatus which formerly came from abroad.

In regard to the financial aspect of the telegraph lines, their proceeds increased from \$698,000 in the fiscal year 1896-97, to \$850,000 in the year which has just ended, a large part of the increase being made up of the proceeds of the international service inaugurated in January last, of the service of market quotations, which has doubled, and of the telegraphic draft service.
